"Hurrah!" cried Tom, as he ran off to his father's place of work, with a can of milk in one hand and some bread in the other. His mother stood at the door watching him as he went merrily whistling down the street, and then she thought of the dear father he was going to, and the dangerous work he was engaged in, and then her heart sought its sure refuge, and she prayed to God to protect and bless her treasures.

Tom, with a light heart pursued his way to his father, and, leaving him his breakfast, went to his own work, which was at some distance. In the evening, on his way home, he went round to see how his father was getting on. James Howard, the father, and a number of other workmen had been building one of those lofty chimneys, which, in our great manufacturing towns, almost supply the place of other architectural beauty. This chimney was one of the highest and most tapering that has ever been erected; and as Tom, shading his eyes from the slanting rays of the setting sun, looked up to the top in search of his father, his heart almost sunk within him at the appalling height. The scaffolding was almost almost all down; the men at the bottom were removing the last beams and poles. Tom's father stood alone on the top. He looked all round to see that every thing was right, and then waving his hat in the air, the men below answered him with a long, loud cheer, little Tom shouting as heartily as any of them. As their voices died away however, they heard a very different sound—a cry of alarm and horror from above! "The rope! The rope!!" The men looked round, and, coiled upon the ground lay the rope, which, before the scaffolding was removed, should have been fastened to the chimney, for Tom's father to come down by! The scaffolding had been taken down, without their remembering to take the rope up. There was a dead silence. They all knew it was impossible to throw the rope up high enough to reach the top of the chimney; or if they could, it would hardly have been safe. They stood in silence and dismay, unable to give any help or think of any means of safety.

And Tom's father. He walked round and round the little circle, the dizzy height seeming every moment to grow more fearful, and the solid earth further and further from him. In the sudden panic he lost his presence of mind, and his senses almost failed him. He shut his eyes; he felt as if, the next moment, he must be dashed to pieces on the ground below.

The day had passed as industriously and swiftly as usual, with Tom's mother at home. She was always busily employed for her husband and children, in some way or other; and to-day she had been harder at work than usual, getting ready for the holiday to-morrow.—She had just finished all her preparations, and her thoughts were silently thanking God for her happy home, and for all the blessings of life, when Tom ran in; his face as white as ashes; and he could hardly get his words out, "Mother! Mother! he canna get down."

"Who, lad? Thy father?" asked his mother.

"They're forgotten to leave him the rope," answered Tom, still scarcely able to speak.—His mother started up horror struck, and stood for a moment as if paralyzed; then pressing her hands over her face, as if to shut out the terrible picture, and breathing a prayer to God for help, she rushed out of the house.

When she reached the place where her husband was at work, a crowd had collected round the foot of the chimney, and stood there quite helpless, gazing up with faces full of sorrow. "He says he'll throw himself down," exclaimed they, as Mrs. Howard came up. "He is going to throw himself down."

"Thee munna do that, lad!" cried the wife, with clear, hopeful voice; "thee munna do that. Wait a bit. Take off thy stocking, lad, and unravel it, and let down the thread with a bit of mortar. Dost hear me, Jem?"

The man made a sign of assent, for it seemed as if he could not speak; and, taking off his stocking, unravelled the worsted thread, row after row. The people stood round in breathless silence and suspense, wondering what Tom's mother could be thinking of, and why she sent him in such haste for the carpenter's ball of twine.

"Let down one end of the thread with a bit of stone, and keep fast hold of the other," cried she to her husband. The little thread came waving down the tall chimney, blown hither and thither by the wind, but at last it reached the outstretched hands that were waiting for it. Tom held the ball of twine, while his mother tied one end of it to the worsted thread. "Now pull it up slowly," cried she to her husband, and she gradually unwound the string as the worsted gently drew it up. It stopped—the string had reached her husband. "Now hold the string fast, and pull it up," cried she, and the string grew heavy, and hard to pull, for Tom and his mother had fastened the thick rope to it. They watched it slowly uncoiling from the ground, as the string was drawn higher.

There was but one coil left. It had reached the top. "Thank God! thank God!" exclaimed the wife. She hid her face in her hands in silent prayer, and tremblingly rejoiced. The rope was up. The iron to which it should be fastened was there all right; but would her husband be able to make use of them?—would not the terror of the past hour have so unnerved him, as to prevent him from taking the necessary measures for his safety? She did not know the magic influence which her few words had exercised over him. She did not know the strength that the sound of her voice, so calm and steadfast had filled him with—as if the little thread that carried him the hope of life once more, had conveyed to him some portion of that faith in God, which nothing ever destroyed or shook in her true heart. She did not know that, as he waited there, the words came over him, "Why art thou cast down, O my soul? and why art thou disquieted within me? Hope thou in God." She lifted up her heart to God for hope and strength. She could do nothing more for her husband, and her heart turned to God, and rested on him as on a rock.

There was a great shout. He's safe, mother, he's safe," cried little Tom. "Thou'st saved me, Mary," said her husband, folding her in his arms. "But what ails thee? Thou seem'st more sorry than glad about it." But Mary could not speak; and if the strong arm of her husband had not held her up, she would have fallen to the ground—the sudden joy, after such great fear, had overcome her. "Tom," said his father, "let thy mother lean on thy shoulder, and we will take her home." And in their happy home they poured forth their thanks to God for His great goodness; and their happy life together felt dearer and holier for the peril it had been in, and for the nearness that the danger had brought them onto God. And the holiday next day,—was it not indeed a Thanksgiving Day?—*English S. S. Magazine.*

Manners.—I make it a point of morality never to find fault with another for his manners; they may be awkward or graceful, blunt or polite, polished or rustic. I care not what they are, if the man means well and acts from honest intentions, without affectedness or affectation. All men have not the advantages of "good society," as it is called, to school themselves in all its fantastic rules and ceremonies, and if there is any standard of manners, it is only founded in reason and good sense, and not upon the artificial regulations. Manners, like conversation, should be extemporaneous and not studied. I always suspect a man, who meets me with the same perpetual smile upon his face, the same congeeing of the body, and the same premeditated shake of the hand.—Give me the (it may be rough) gripe of the hand, the careless nod of recognition, and when occasion requires, the homely welcome salutation, "How are you, my old friend?"

Cheerfulness.—Cheerfulness and a festival spirit fills the soul full of harmony—it composes music for churches and hearts—it makes and publishes glorifications of God—it produces thankfulness and serves the end of charity; and, when the oil of gladness runs over, it makes bright and tall emissions of light and holy fires, reaching up to a cloud, and making joy round about; and, therefore, since it is so innocent, and may be so pious and full of holy advantage, whatever can innocently minister to this holy joy does set forward the work of religion and charity. And, indeed, charity itself, which is the perfect top of all religion, is nothing else but a union of joys concentrated in the heart, and reflected from all the angles of our life and intercourse. It is a rejoicing in God, a gladness in our neighbor's good, a pleasure in doing good, a rejoicing with him; and without love we cannot have any joy at all.

Politeness at Home.—By endeavoring to acquire a habit of politeness, it will soon become familiar, and sit on you with ease, if not with elegance. Let it never be forgotten that genuine politeness, is a great fosterer of family love. It softens the boisterous, stimulates the indolent, suppresses selfishness, and by forming a habit of consideration for others, harmonises the whole. Politeness begets politeness, and brothers may easily be won by it to leave off the rude ways they bring home from college. Sisters ought never to receive any little attention without thanking them for it, never to ask a favor of them but in courteous terms, never to reply to their questions in monosyllables, and they will soon be ashamed to do such things themselves.

Evenings at home are amongst the most delightful and most profitable privileges the business and working man can enjoy, if they are judiciously provided for. A frolic with the babies—a quiet chat with wife, an agreeable book, nuts and apples, may be—all around a bright fire in a cosy room. On that "hill of fare," let the bachelor consider and resolve to "mend his ways."

A chorm of love runs through all the sounds of creation, but the ear of love alone can distinguish it.

ROCHESTER, NOVEMBER 25, 1854.

PROCLAMATION,

By Horatio Seymour, Governor of the State of N. York.

As acknowledgment of our dependence upon God, and of our obligations to Him, is at all times the duty of a Christian People. But when the Almighty has again crowned the year with His goodness, and we are enjoying the gathered fruits of His bounty, it is eminently fitting that we should offer the sacrifice of praise and thanksgiving.

I therefore appoint THURSDAY, THE 30TH DAY OF NOVEMBER, for this appropriate service; and invite the citizens of the State to assemble on that day, in their respective places of worship, to present their acknowledgments to the Parent of the Universe for His multiplied mercies. And with our thanksgiving let us mingle prayers for a continuance of the countless blessings we, as a People, enjoy, remembering that His wisdom alone can rightly direct—His power support, and His goodness give strength and security.

In witness whereof I have hereunto subscribed my name and affixed the privy seal of the State, at the city of Albany, this fifth day of (L. S.) November, one thousand eight hundred and fifty-four.

HORATIO SEYMOUR.

By the Governor. H. W. DE FEY, Private Sec'y.

Thanksgiving.

CONSONANT to a time-honored custom of our ancestors, the Governors of most of the States have appointed a day for the anniversary of Thanksgiving. A portion of these States held the festival on the 23d, but a majority of the Governors, and ours among the number, have designated Thursday, the 30th, as the day. In the minds of some, the prominent idea of a Thanksgiving is a time for social enjoyment, a feast of fat things, and a rest from manual labors; but a great majority of our fellow citizens understand and appreciate the true intent of the sacred festival, and enter upon its duties in the higher and holier sense of its original appointment, viz., that of the public expression of a profound and humble gratitude to God for his countless mercies bestowed upon them during the year. It is true that this class, with the other, make it an occasion for a feast, and a re-union of friends; but the feast is considered an exponent of the bounties of a beneficent Providence, and is partaken of with a due sense of the source from whence all these bounties flow.

All men are subject to afflictions, and few there are throughout the wide world, who have not experienced them in one form or another during the year. Friends near and dear have been removed by death, sickness has entered the household, accidents have befallen some, and pecuniary misfortunes have come upon others,—but as a whole we are so free from calamity, so much better off than we might be, and than possibly our merits deserve, that a reasonable and thinking man cannot but confess that his life and happiness is in the hands of a beneficent and merciful Being.

We are peculiarly blessed as a nation in all the elements of prosperity; our harvests have been ample, our people prosperous, and our country free. The three great scourges of humanity and messengers of God's wrath, viz., famine, pestilence and war, are at this moment withheld from us. Although the drouht and other causes have partially injured the crops in some portions of our wide spread country, we have enough, not only for our own necessities, but also for a partial supply to the deficiencies of other lands. The Cholera and Yellow Fever have scourged us in various localities, but they have been much less severe than at former periods, and have now altogether disappeared. War, that is at this very moment desolating other countries, has left us unharmed, and we go forth under the protection of our neutral flag to reap a rich harvest of commercial prosperity,—In the enjoyment of our blessings let us not forget those less favored than ourselves, but lend a helping hand to alleviate the necessities of others. It is not the man who says to the poor, be ye clothed and be ye fed, but the man that does it, who proves himself a real philanthropist.

EXTENSION OF NAVIGATION.—Western papers say that the steamer SAM. WARN is expected to pass through the Sault St. Mary's canal the present week. This will be the commencement of a new and important era in navigation, and adds near four hundred miles to the now unrivaled and extensive inland navigation of our country. With the reciprocity treaty in operation, which will open to our use the St. Lawrence and the Canada canals, a vessel can load for Europe or China even direct from the head of Lake Superior. Truly, America is the land for the accomplishment of gigantic enterprises, rivaling the pyramids in magnitude, and infinitely surpassing in utility the works of all antiquity.

GREAT SNOW STORM.—The *Lake Superior Journal*, of Nov. 4th, says: A season of beautiful Indian Summer weather suddenly concluded on the last day of October, since which time we have had a series of rain and snow storms of the severest kind. There was quite a body of snow on the ground yesterday and to-day, the weather having grown colder, the sleighing is passable. The ground was frozen last night hard enough to bear horses, but a bright sun to-day and an easterly wind will soon dissipate the frost, and we shall have two or three weeks, in all probability, of "fair sailing" before the close of navigation.

The New York Election.

RARELY if ever has a Gubernatorial contest been conducted in this State with so nearly balanced forces as in that which has just been concluded. Day after day, as the returns came in, the papers were watched for a solution of the question who is to be our Governor for the ensuing term; and day after day the question remained unsolved. The tables have been turned and returned upon the candidates of the two leading parties, now one being pronounced the victor, and now the other; now one shouting ahead sufficient, it was believed, to ensure his election, and then his opponent coming up unexpectedly until they stood shoulder to shoulder.

There has been a wonderful change in the prospects of the election since the results first began to come in. The telegraph reports of the first day seemed to indicate unmistakably that the contest lay between SEYMOUR and ULLMAN. CLARK was pronounced a distanced runner, and as such might as well be withdrawn at once by his friends. Afterwards, to the surprise of all, and particularly of his political foes, he began to recover ground, slowly at first but afterwards more rapidly, until he passed the Know Nothing candidate by more than forty thousand.—SEYMOUR was then pronounced elected by the wiseacres, at least by a plurality of 6,000, and preparations were made by some of his political friends to celebrate the victory; but this plurality was pared down as the official vote came in until he actually falls behind his opponent.

The returns are all official except those from the city of New York, which last are footed up and reported at a majority for SEYMOUR of 14,581, by the County Clerk. In this view of the case CLARK is elected by the remarkably small plurality of 277 votes out of 455,074 which were polled. The report of the votes for the various candidates stands as follows: CLARK, 154,869; SEYMOUR, 154,592; ULLMAN, 113,761; BRONSON, 31,852.

The decision of the State Canvassers may upset this calculation, but the papers generally concede that the Whig candidate is the successful man.

WAR CLOUD VANISHING.—Letters from London state that the diplomatic difficulty touching Mr. SOULE has been settled. The letter says, among other things: "Louis Napoleon had a personal interview with Mr. Mason, in which he withdrew the restraints upon Mr. Soule's passage through the French territory, disclaiming all intention of insult to the United States in the person of its Envoy. The manner of the Emperor was dry and curt, and it is believed that this disclaimer was a diplomatic move, understood to have been dictated by England, the English Cabinet advising that the initiatory against Mr. Soule, personally, should be taken, if at all, by their Government. The banquet proposed to be given to Mr. Soule by the Refugee Republicans in London, will probably afford the Home Office an opportunity for action."

The war-horse of Uncle Sam will therefore probably be unsaddled, and the cloud end in smoke merely.

ECCLESIASTICAL USURPATION.—The Roman Catholic Vicar General of San Francisco has recently assumed a very dangerous exercise of power, in annulling the marriage of James Mulqueen and Sarah J. Summers, who were united in a parish church in Ireland, in 1848. He also married Mulqueen to another woman last June. The reasons he gives are that Sarah Summers, the first wife, was not baptized—that dispensation has been given in order to contract legally before the church, and further that they were not married by any magistrate legally authorized. He therefore declares that such a marriage never existed, and that the marriage is null and void.

The numbskull who thus submitted to the judicial usurpation of the priest, is clearly liable to prosecution for bigamy under our laws, and it is to be hoped that the people of our Pacific metropolis will see to it, that he does good service for two or three years in State Prison.

PROMOTION ON MERIT.—The London Standard says, it is understood that Lord Raglan will be raised to the rank of Field Marshal after the operations at Sevastopol. The committee of the House of Commons reported in favor of additional Field Marshals of royalty being made.—We believe it is decided to give his Lordship £50,000 in lieu of pensions; his private fortune was merely £1,000.

It seems by this, that the English people regard the fall of Sevastopol, and the consequent subjugation of the Crimea, as a foregone conclusion. There was a certain milkmaid who once went into minute calculations upon a brood of chickens, before even the eggs were laid to produce them; but she failed sadly in her calculations. If his Lordship takes the back track with Sevastopol uncaptured, will the Field Marshalship and the £50,000. be forthcoming?

ANTHONY BURNS.—It may be some gratification to Anthony's Boston friends to learn that Anthony left here on Friday, the 3d inst., in possession of Daniel McDaniel, Esq., of Nash county, N. C., who purchased him for the purpose of putting him to work in a cotton field, or where duty calls.—*Richmond Enq.*

The editor who would exult over such an event ought himself to be put to work in a tread-mill, or some other proper place "where duty calls."

RACHEL'S PROGRAMME of conditions for an engagement in this country exacts, it is said, a salary of twelve hundred dollars a night, and the payment of all her expenses.

Literary Notices.

WEBSTER AND HIS MASTER-PIECES. By Rev. U. F. TEFFT, D. D., LL. D., author of "Hungary and Kossuth." In Two Volumes. Auburn and Buffalo: Miller, Orton & Mulligan.

THIS work gives the most complete Biography of WEBSTER yet published, and reference to the contents of Volume One will show that it enters fully into the subject. It treats of the WEBSTER family, of the youth and College life of DANIEL, and of his career as a lawyer, a Representative and Senator in Congress, as Secretary of State and again a Senator—giving the most interesting and important incidents and achievements of his varied and eventful life.—The Second Volume gives a selection of Mr. WEBSTER'S acknowledged master-pieces in each department of his great field of intellectual action—as a Constitutional Lawyer, as an Anniversary, Dedicatory, and Funeral Orator, as a Representative and Senator in Congress, as a Literary and Scientific Lecturer, Public Dinner Speaker, and Official Letter Writer. The work is well got up, and very creditable both to Author and Publisher. Sold by D. M. DEWEY, Arcade Hall.

MAXIMS OF WASHINGTON; Political, Social, Moral and Religious. Collected and arranged by JOHN FREDERICK SCHROEDER, D. D., a citizen of the United States. New York: D. Appleton & Co.

THE Maxims of the "Father of his Country" cannot be too prominently or too frequently brought before the people. They contain lessons to be learned and pondered by all—lessons which can but make men wiser, better and happier, as members of social, political, and religious communities. This work is a handsome and valuable one, and we hope it will have a wide circulation. Sold at DEWEY'S.

MRS. SIGOURNEY'S NEW WORK.—Messrs. PHINNEY & Co., of Buffalo, have just issued a new work by Mrs. SIGOURNEY, entitled "Sayings of the Little Ones, and Poems for their Mothers," abounding in diverse illustrations of youthful character, and highly interesting as depicting the gradual development of the mental and moral faculties of children. It is tastefully got up, and one of the most appropriate of Holiday gifts for mothers.

THE NEW YORK TEACHER.—The second number of Volume third of this periodical is received. It is replete with excellent matter, and commends itself by its contents to the support of every one interested in the subject of education. The *Teacher* is published under the auspices of the State Teachers' Association, and hence directly interests the ablest instructors throughout the State in making it what it purports to be, one of the foremost in the ranks of educational publications. It is issued monthly in a pamphlet of fifty pages reading matter, and is furnished at the low price of one dollar a year. Let all intelligent men, both in the State and out of it, lend the *Teacher* a helping hand, and receive for their money an ample equivalent. TRUMAN H. BOWEN, late Professor of the State Normal School, Publishing Agent, Albany.

Later from the Shipwreck.

THE shipwreck of the emigrant vessel New Era, on the coast of New Jersey, which was announced by telegraph just as we were going to press last week, proves to have been a much more melancholy affair than was at first supposed. At least three hundred of the unfortunate passengers either found a watery grave or perished from cold and exposure. The survivors remained through an entire night and part of a day clinging to the rigging and spars of the wreck, and when rescued by the surf boats were so chilled and exhausted that many of them subsequently perished. The inhabitants in the vicinity of Deal Beach threw open their houses for the reception of the survivors, and did everything in their power to alleviate their sufferings.

GREAT BANK ROBBERY.—A dispatch from Hartford, Conn., dated Nov. 18th, says that the Windham Bank was robbed the previous night of $22,000, $7,000 of which was in specie, the balance in bills of the bank. The robbery was effected by three men, who entered the bank early in the evening. To prevent alarm, the watch dog was first poisoned, and when the clerk, who slept in the bank, entered, about 9 o'clock, the robbers gagged and bound him, and one of them stood over him with a revolver, while the others, with crowbars and other implements, opened the safe and secured the booty.

Since the above was in type the following dispatch has been received:

NEW LONDON, (Ct.,) Nov. 19.—The money stolen from the Windham Bank, on Friday night, was recovered last night at Allyn's Point, and four men arrested.

Mr. Sheriff Bliss suspected a party of four men who were hanging about the steamboat wharf, at Allyn's Point, just previous to the departure of the boat for New York, and arrested them as they went on board. On searching their baggage $20,000 of the $22,000 stolen were found, and the balance secreted on board the steamer. The robbers have been safely lodged in jail at this place. We have not learned their names. They were said to have the appearance of genteel and finished scoundrels.

A PROPOSED NEW COUNTY.—At the late meeting of the Board of Supervisors, a proposition was introduced to divide the County of Monroe, making the city of Rochester a county by itself, and uniting the country towns under a distinct organization. Several of the country members favored the proposition, but a majority promptly laid the resolution on the table.

News Paragraphs.

☞ The influx of immigrants over the Plains this season into California is variously estimated between 18,000 and 20,000. It would perhaps be fair to put it at 20,000—which, added to the excess of arrivals by sea, would give a net addition of 16,744 to our population during the first three-quarters of the year. The total increase by the end of the year will be about 55,000—altogether a very satisfactory result.

☞ The teachers of the Buffalo public schools are about to contribute a stone to the Washington Monument. The stone is what is called "Bulfalo Plains Stone." It cost $100, and the design of the carving is as follows:—A hand extending a thumbean towards another, representing the giving of light to the young mind.

☞ Rev. Eleazer Williams, the Bourbon of Putnam, is now at Montpelier prosecuting the claims of the St. Regis Indians before the Vermont Legislature. The Caughnawaga or St. Regis Indians claim to have for a hunting ground all that part of Vermont lying north of Otter Creek.

☞ Zion's Herald publishes a letter from Rev. George Fletcher, dated at Poplar, near London, in which the venerable man states that he is in the 108th year of his life. He adds that he is still able to preach, and is invited to do so by different denominations from all parts of England.

☞ Lord Stratford de Redcliffe, the British Ambassador at Constantinople, has succeeded in procuring a firman to suppress the trade in Circassian and Georgian slaves. Some persons, taking the peculiar features of Oriental life into account, think this a measure of questionable philanthropy.

☞ A vessel containing some 300 casks of nails struck a part of a sunken wreck off Norwalk, Ct., a day or two since, and went down in about ten minutes after the accident. Her cargo was consigned to a house in New York, and was not insured.

☞ The scaffolding used in the building of the county workhouse in Patterson, N. J., gave way Nov. 14, killing immediately three persons. One is so seriously injured that but little hopes are entertained of his recovery, and four others are more or less injured.

☞ The St. Louis Democrat, Senator Benton's organ, has published several strong articles to prove that it is for the interest of Missouri that Kansas should be a free State. In prosecuting the argument, the Democrat is unsparing in its deprecation of the existence of slavery.

☞ It is said that the house of A. Belmont & Co. have commenced a chancery suit against the New Haven R. R. Co., for $65,000 damages on stock of the Schuyler issue, which was hypothecated with them. Several other suits are also understood to have been commenced.

☞ The town of Petersburg, Texas, was recently sold for debt, for less than a hundred dollars. The Court House sold for sixteen dollars, and the tavern for fifteen dollars, the difference being considered due to the dignity of the Court!

☞ A writer in the Cincinnati Gazette says he has been over the States of Indiana, Kentucky, Illinois, Missouri, &c., and he finds the number of hogs at least 20 per cent larger than last year—that there is an increase of a million and a half.

☞ In New York on Thursday evening week, one of the main pipes of the aqueduct, on 125th street, burst with great violence, nearly overwhelming the inmates of some Irish hovels contiguous. The pipe was upwards of four feet in diameter.

☞ The American Bible Society have issued a work entitled "Testimony of Distinguished Laymen to the Value of the Sacred Scriptures," containing the opinions of such men as Giraffius, Newton, Erskine, Clay, Webster, Everett, Silliman, and others.

☞ T. B. Cuoming, the acting Governor of Nebraska, has issued his proclamation ordering a census of the territory to be taken immediately, in order that an election for a delegate to Congress, and for members of the territorial Legislature, may be held at an early day.

☞ The water is extremely low on St. Clair Flats. At one time last week, there were between fifty and sixty vessels aground. Those who vote against harbor and river improvements should be made to answer to their constituents for such a state of things.

☞ Miss Lydia Root, Principal of the Cottage Hill Seminary for young ladies in Poughkeepsie, died on Monday week, of apoplexy.—She enjoyed her usual good health on Sunday, rose as usual on Monday morning, and died between 6 and 7 o'clock P. M.

☞ Out of one hundred and ten steam packets now employed in carrying the U. S. mails, fifty-four are built of wood, and fifty of iron; of these, eighty-nine are propelled by paddle-wheels, and twenty-one by screws.

☞ The year 1854 began on Sunday, thus having fifty-three Sundays. January, April, July, October and December have each five Sundays. Such an array of Sundays, it is said, will not occur again until 1882.

☞ At the Jefferson County, Wisconsin, Fair the Messrs. Ayer, of Aztalan, exhibited samples of Dent corn, a measured acre of which yielded 114 bushels, shelled; and this was no better an acre than the other seventeen in the same field.

☞ Twenty thousand acres of land were sold recently at the land office at Jeffersonville, Indiana, at 12½ cents per acre, the price authorized by the late law of Congress for all lands that have been in market thirty years.

☞ The oldest inhabitant of Astoria, Oregon Territory, is an old half-breed negro and Malay, who has lived at the settlement forty-six years, and is now, with his family, of partly Indian extraction, well to do in the world.

☞ Instead of a salary, Mr. Aspinwall, President of the Pacific Mail Steamship Company, receives two and a half per cent commission on all receipts, which, for the nineteen months ending Oct. 1st, amounted to $84,328.

☞ Vespasian Ellis has established a Native American Know-Nothing paper at Washington, entitled the Native American Organ. The first number was issued on the 13th inst.

☞ Tom Thumb has withdrawn from public exhibition for this winter. He has taken up his residence with the family of Mr. Barnum, at Iranistan, Connecticut.

☞ When the British army embarked from Varna 5000 horses were turned loose; discharged from service to be picked up gratis by the inhabitants.

☞ The Rev. Antoinette Brown has resigned the pastoral charge of the Congregational church at South Butler, Wayne co.

News Brevities.

—— The yearly income of Wm. B. Astor is $1,300,000.

—— The price of frogs in Cincinnati is three dollars a dozen.

—— Rich silver mines have been lately opened on the Chattahoochee river, Georgia.

—— The State of Connecticut is out of debt, and has money loaned at interest.

—— The great balance dock at Williamsburgh, L. I., will raise vessels of 8,000 tons.

—— Very valuable copper mines have been discovered at Woodstock, N. B.

—— Working oxen are worth $250 to $300 per pair, in California.

—— The library of the Hon. Edward Everett contains from 7,000 to 8,000 volumes.

—— There are seven thousand two hundred and thirty-nine farms in Worcester Co., Mass.

—— Ice formed at Charleston, Savannah, and Columbia, S. C., on the night of the 24th inst.

—— The Episcopal Church at Granville, Washington county, was burned last week.

—— The Buffalo Express reports a woman living upon the Cattaraugus Reservation 111 years of age.

—— Among the English force at the Black Sea, is a corps of five divers and a sergeant, equipped with submarine armor, &c.

—— Pork buyers in Cincinnati are paying $3,60 and $3,10 per hundred, nett, and are not anxious to buy largely at that.

—— During the present year 2,514,213 tons of coal have arrived at Philadelphia from the Pennsylvania mines.

—— W. W. Corcoran, the rich Banker, is building a handsome and substantial office in Washington city, for a Mechanics' Library.

—— The Canton (Miss.,) Madisonian says there was a slight frost at that place on the morning of the 18th inst.

—— A return of the population of Ireland shows that the number of inhabitants has fallen off two millions in the past five years.

—— During service on Sunday week, the Presbyterian Church at White Plains, N. Y., took fire from the chimney, and was destroyed.

—— The annual election of the Directors of the N. Y. Central Railroad Company, will take place in Albany on the second Tuesday of Dec.

—— On the morning of Sunday, the 5th inst., the body of Mr. Joseph White, of Clinton, Mo., was found frozen to death, with a keg of rum beside it.

—— It seems that the Marylanders consider their oysters still worth fighting about, as they have commenced their annual warfare with the Pennsylvania oystermen.

—— The citizens of Texas are warning the transient Mexicans, those not freeholders, to leave the State, as they tamper, it is said, with the slaves.

—— Frogs that would make a Frenchman's mouth water, are brought to the Sandusky market in abundance. They are caught with a hook among the marshes.

—— The Hartford Courant has been sold, on account of the death of John L. Boswell, to M. Day. The price was $24,000, half cash and half in six months.

—— A slave over sixty years old was whipped to death by James Mayo, in Alabama, a few days since. A warrant was issued for the wretch but he escaped.

—— The two girls who were arrested in Manchester, N. H., a short time since for horse stealing, &c., were sentenced to four years hard labor in the State Prison.

—— A large proportion of the land at 12½ cts. per acre, at the Chillicothe office, in Ohio, is entered by colored persons, who are actual settlers on or near the soil they purchase.

—— Letters from Rochelle and Cognac, say that as the vintage will scarcely be sufficient for home consumption, there will be no brandy made this year for export.

—— The Express says it is a common practice in New York to smoke while attending a funeral. It often sees long files of persons with cigars in their mouths, following a hearse.

—— During the unsuccessful cruise of the clipper John Clemens, in search of the Arctic's boats, she picked up a flag-staff which was recognized as having belonged to the Arctic.

—— The propeller Bucephalus foundered during a severe gale, in Saginaw Bay—seven of the crew were drowned. She was loaded with corn for Buffalo. The vessel is a total loss.

—— The inhabitants of the White Mountain region are rejoicing in a clear, cool, invigorating atmosphere. Snow is three feet deep on the summit of Mount Washington.

—— The interior of the new capitol at Washington is to have ornamental columns, pilasters and panels, of verd antique marble, from Vermont, mingled with those of white marble.

—— On the day of the suspension of several private banks in Cincinnati, over nine hundred private dispatches were transmitted from one telegraph office in that city, to all parts of the Union.

—— The farmers of California, who bring their produce to San Francisco, at present, can hardly realize enough for it to pay the expenses of raising, so abundant have the crops been this year.

—— The Superintendent of New York city says there are about one hundred and fifty thousand boys in that city of an age to attend school. Of this number only fifty thousand on an average are constantly there.

—— Prof. J. Milton Sanders has been convicted at Memphis, Tenn., of attempting to aid in the escape of slaves, and has been sentenced to the penetentiary for three years. A motion, however, is now pending for a new trial.

—— At the Burial of Marshal de St. Arnaud, the flags of France and of England, for the first time in history, covered the same coffin, and Mussulman cannon resounded in a sign of grief at the funeral of a Christian General.

—— The Hamilton (C.W.) Banner says that the Bench of Magistrates have dismissed the charge preferred against the Directors of the Great Western Railway Company with reference to the late lamentable accident.

—— Some of the Oregon papers denounce in the severest terms the agents of the Hudson Bay Company, particularly those at Fort Boise, which is one of the Company's trading posts, for selling arms and ammunition to the Indians.

—— At New London, Butler co., Ohio, Nov. 16th, the tower of the new Congregational church, in course of construction, fell on the workmen, killing three of them and wounding ten others.

Publisher's Notices, &c.

SPECIAL NOTICES—TO AGENTS, &C.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THOSE who are furnishing clubs, (20 to 50 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ IN remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ IN writing us, please be particular to give your P. O address correctly—the name of your Post Office (not Town,) County and State. Write all names plainly.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ SPECIMEN numbers of the RURAL cheerfully forwarded to all disposed to aid in augmenting its circulation. We will send to your own, or the address of friends, all the necessary documents—extra numbers, show bills, prospectuses, &c. It will afford us pleasure to respond to all requests in this line.

THE RURAL FOR 1854.

PREMIUMS FOR SUBSCRIBERS:

ONE HUNDRED DOLLARS for the largest list of Yearly Subscribers to the RURAL NEW-YORKER—the payment to be remitted according to our Club terms, previous to the 1st day of February, 1855.

EIGHTY DOLLARS for the next (second) largest list, as above specified.

SEVENTY DOLLARS for the third list.
SIXTY DOLLARS for the fourth list.
FIFTY DOLLARS for the fifth list.
FORTY DOLLARS for the sixth list.
THIRTY DOLLARS for the seventh list.
TWENTY-FIVE DOLLARS for the eighth list.
TWENTY DOLLARS for the ninth list.

TEN DOLLARS to each of the *five* persons sending the 10th, 11th, 12th, 13th, and 14th lists, as above.

FIVE DOLLARS to each of the *five* persons sending the 15th, 16th, 17th, 18th, and 19th lists.

THREE DOLLARS to each of the six persons sending the 20th, 21st, 22d, 23d, 24th, and 25th lists.

☞ We also offer the following very liberal list of

CHRISTMAS CASH PREMIUMS.

FIFTY DOLLARS for the largest list of subscribers to the RURAL NEW-YORKER, sent in or mailed according to our terms, on or before the 20th day of December ensuing, (1854.)

THIRTY-FIVE DOLLARS for the next largest list, as above.

TWENTY-FIVE DOLLARS for the next list.
FIFTEEN DOLLARS for the next list.
TEN DOLLARS for the next list.
FIVE DOLLARS for the next list.

☞ Persons competing for Christmas Premiums are not excluded from the February prizes, so that one person may secure *One Hundred and Fifty Dollars, in Cash*—another *One Hundred and Fifteen Dollars*, &c.

(In order to give Post Masters, Local Agents, &c., a fair and equal chance, traveling agents, post-masters and citizens of Rochester are excluded from competition for any of the above Premiums.)

SPECIFIC PREMIUMS.

IN order to REWARD EVERY PERSON who may aid in extending the circulation of the RURAL NEW-YORKER, we offer to such as do not compete for any of the preceding Premiums, the following liberal gratuities for subscribers forwarded *previous to the 1st of April*, 1855:

THREE DOLLARS, IN BOOKS, or a handsomely bound volume of the RURAL for 1854, for THIRTY subscribers.

To every one remitting for twenty copies ($26,) an extra copy of the RURAL and either volume of the WOOL GROWER AND STOCK REGISTER—or, THE HORTICULTURIST for 1855.

The same premium to every one remitting for FIFTEEN copies, ($20,)—for TEN copies ($16.)

To every one remitting for six copies ($10,) an extra copy of the RURAL, or the HORTICULTURIST for 1855.

For $5 we will send THREE copies of the RURAL, and either vol of the WOOL GROWER AND STOCK REGISTER.

For $4 we will send one copy of the RURAL, and either *Putnam's, Harper's, the Knickerbocker, Lady's Book*, or *Graham's Magazine* for one year.

For $3, we will send a copy each of the RURAL and the HORTICULTURIST for 1855.

All competitors for premiums are expected to adhere strictly to the following

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR. *Three Copies, one year, $5—Six Copies for $10—Ten copies for $16—Fifteen Copies for $20—Twenty Copies for $25, and any additional number at the same rate.* ☞ *As we are obliged to pre-pay American postage, our lowest Club price to Canadian subscribers is $1,50 per copy.* ☞ *To facilitate mailing, we prefer sending Club papers to one address at each post office, but the names of subscribers will be written on the papers if desired. Club papers sent to different post offices, and names can be sent in at different times. Bills of all specie paying Banks received at par on subscription.*

☞ Specimen numbers, show-bills, prospectuses, &c., sent free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE,

Oct., 1854. Rochester, N. Y.

Foreign Intelligence.

Arrival of the Steamship Asia.

THE Asia reached New York November 16th, bringing four days later news from Europe.

The Captain of the English steam Transport, which left Balaklava on the evening of the 26th, confirms in a great part the information brought previously by a French ship, that the Russians attacked the forts in the vicinity of Balaklava on the 25th, their number being about 30,000. The attack was unexpected. There were Ottoman and Scotch troops engaged. The Turks gave way and even left their guns, which were seized by the Russians and turned against them. The Scotch remained firm in their position, other forces arrived and the Russians were obliged to yield. The Russians remained, nevertheless, masters of the two forts from which they fired on the Allies. Three regiments of English Light Cavalry exposed to the cross fire of the Russian batteries suffered immensely.

The French took part in the affair with admirable bravery. On the next day their position was attacked by a body of 800 Russians, as well as from the side of the town as from that of Balaklava, they repulsed the enemy with great slaughter. The loss of the Russians must have been very great. It is affirmed that the fire of the batteries of the town had much slackened, and according to the reports of wounded officers, some of whom have arrived at Bayakdere, the belief is continued that Sevastopol would soon be in the hands of the Allies.

Stratford De Radcliffe, Lord Dunkellin, is promoted to Captain and Lieut. Colonel. Up to the 21st of October, the seige and bombardment of Sevastopol was going on with regularity and success, and the loss of life was so great in the town of Sevastopol, that the air was said to be tainted by the number of unburied dead.

Admiral Nachimoff had been killed by a shell. The loss of the allies is comparatively small, and Lord Raglan is understood to be favorable to a prolonged bombardment in preference to an immediate assault.

The Wiener Zeitung publishes the following:

KICHENOFF BESSARABIA, Oct. 29.

On the 25th, Gen. Liprandi attacked the detached camp of the English and took the four redoubts which protected their position. The assailants also took eleven guns. At the same time such a powerful cavalry attack was made, that it probably cost the English half their light cavalry. Lord Cardigan, who commanded, escaped with difficulty. Lord Dunkellin was taken prisoner. Greek accounts from Odessa confirm this, and say that the English cavalry lost 5000 men. It is certain that the Russians have received considerable re-inforcements, and a still stronger corps was expected from Perekop. In the recent attack the forts at the mouth of Sevastopol harbor, and the vessels of the allies were much damaged.

The British were said to be within 300 yards of the Russian works, but the French works were not strong enough, and had been much injured.

The French division from Piræus had passed the Bosphorus as a re-inforcement to the besieging party.

It is said that two Russian men-of-war, which had been careened over to serve as batteries, had been sunk by the fire of the allies. Water was beginning to fail in Sevastopol. Lord Ragalan's chief interpreter, a Greek, had been sent to Constantinople for trial as a Russian spy.

Menschikoff reports, officially, the loss of the Russians at Alma at 4,500, and that Fort Constantine had been much damaged, and that bastion No. 3 had thirty-three guns dismounted.

The Paris correspondent of the London Times says:—"I am informed the French Government have in their possession positive evidence of the participation of Mr. Soule in some vast plan to revolutionize nearly the whole of Europe, and it is even added that those plans occupied the attention of the diplomatic congress lately held at Ostend."

The U. S. Minister at Paris had an interview with M. Drouyn Del'Huyes, Minister of Foreign Affairs, on the subject of Mr. Soule's exclusion from France. M. Del'Huyes assured him there were good reasons for the conduct of the French authorities, and that they should be forthcoming when necessary.

LIVERPOOL MARKETS.—Denison & Co., and most others, report the market dull in the early part of the week, but it closed with an improved demand at a decline, however, on the week of 1s on flour, 2da3d on wheat, and 1s on Indian corn.

Western Canal flour 40s@41s; Baltimore and Philadelphia 42s; Ohio 41s@45s. No Canadian or sour in the market.

White wheat 12s at 2s 6d; red and mixed 11s a 1s 9d. Corn—white, yellow and mixed, 42s 44s.

Gardner & Co. report beef in good demand. Prices still for pork.

Money easy.

SEVERE PENALTY.—Zachariah B. Porter, of Potters's Hotel, Cambridge, was tried in the Middlesex, (Mass.,) Common Pleas on Monday week, on a complaint of violation of the liquor law, containing nineteen counts, and was found guilty on eighteen of them, also of being a common seller. He was tried before the Police Court of Cambridge on a complaint containing nineteen counts, in which he was found guilty on eighteen, and was sentenced to pay a fine of ten dollars and costs on the first, and twenty on the second, and twenty dollars fine and three months imprisonment in the common jail on each of the other sixteen counts, making in all three hundred and fifty dollars and costs, and four years imprisonment, from which he appealed, and was tried as above. The case goes up to the Supreme Court on exceptions.

LUMBERING THIRTY YEARS AGO.—An Eastern paper, speaking of lumbering operations in 1819, says: "Stumpage of the best pine on Passadumkeag waters, (Me.,) was purchased through Gov. John Neptune, of the Penobscot Indians, at the rate of one barrel of flour for the winter's operation of a six ox team. The expense of the outfit, exclusive of the cost of the oxen, was about $500. The provender for the cattle consisted of two hogsheads of smoked alewives, which were amply sufficient to keep six oxen in good heart and flesh for the winter. The logs were sawed at Oldtown, at the halves, sorted into two classes and sold at Bangor at $7@11."

A LARGE CHERRY TREE.—The Rev. Mr. GALE, of East Aurora, writes to the editor of the Buffalo Republic as follows:

There stands at the present time in the town of Genon, Cayuga Co., in this State, on the farm of Mrs. John Moe, an English cherry tree, that was brought from Duchess County, 57 years ago, and set in the yard, which now measures 15 feet and 4 inches around the smallest place below the limbs and the branches spread 72 feet, and it was judged that there were ten bushels of fruit upon it the present year. If there are any more such, I should be happy to hear of their whereabouts. I think that the equal to it cannot be found in America.

AN IMPUDENT ROBBER.—The Detroit Advertiser says that on Thursday last a rough looking character went into a prominent clothing store in Detroit, remarking that he wished to look round to see where the best goods were, as he intended to break in there that night and help himself. The clerks laughed, and allowed him to look as much as he wished. When night came, sure enough the store was broken into, the cashier's drawer robbed of $150 in cash, and $700 worth of nice clothing carried away. Nothing has since been heard of the rascal.

AMERICAN MACHINERY ABROAD.—The Messrs. Adams, of South Boston, have constructed two of their improved six-roller printing presses for Scotland, which are now ready to be shipped. One of them is for Blakey & Son, Glasgow, the other is for a printing house in Edinburg. They are designed for printing the nicest wood cuts, and have improvements, consisting of movable flys and strings that obviate all difficulty heretofore existing in the way of good work, that which caused the sheet to blur after the impression was given.—*Boston Post.*

THE MONEY EXCITEMENT.—CINCINNATI, Nov. 17.—Money matters are quiet, and are again beginning to assume a more natural appearance. There have been no failures among the merchants, and indications are that the worst of the panic has been experienced. Eastern exchange is quoted 1½ to 2½ premium without much demand for it. Hogs are selling at $3 95@4.

Marriages.

In Pittsford, the 13th inst., by the Rev. M. Tooker, Mr. SEYMOUR STONE and Miss HANNAH C. ANDRUS, all of Pittsford.

In Holley, Nov. 11th, by Rev. J. Copeland, Mr. HENRY F. CARPENTER, of New York, (formerly of this city) and Miss ELIZABETH R. DUTCHER, of Holley.

Deaths.

In Marion, Wayne County, N. Y., Nov. 5, of Whooping Cough, HARRIET EVALINE, youngest daughter of Philander and Elizabeth H. Antisdale, aged four months and eighteen days.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Nov. 22, 1854.

THERE are no very essential changes in prices of the grains this morning, although Corn is quoted somewhat lower, and Wheat a little higher than last week. Brewers and Eastern have entered into an agreement among themselves not to pay over one dollar for Barley, and it is therefore held at that figure.

Poultry is plenty and cheaper. Other articles of farm produce about the same as last week.

The Money market is still stringent, but somewhat easier The pinch at the West seems to be partially subsiding, and no new developments have appeared in financial circles.

The Northern Light brought in on the 14th, $569,000, and there has been carried abroad during the week $1,328,-014, making a total for the year of $30,351,589. There is a gratifying reduction in the amount of foreign imports from those of last year. During the week the imports at New York, according to the *Tribune's* tables, were $1,-846,777 against $2,631,109 for the same time in 1853.

REMEMBER that the Lady's Book has always given Steel Engravings, and throughout the year, not published in them in January and February numbers, and then omitting them. In the Lady's Book alone you receive what no other three Magazines can furnish you.

EVERYDAY ACTUALITIES.

This is another series of articles peculiar to this Magazine. Every one of these articles is illustrated with at least eight or ten of the finest wood engravings This department is very interesting, conveying information in an agreeable form, suitable for ladies and gentlemen, that cannot be obtained elsewhere.

The expense of one number of the Lady's Book, including steel engravings and literary matter, paid for, not taken from English Magazines, far exceeds that of any other Magazine published in this country. We make no exception, and are willing to have the fact tested.

TERMS.

One Copy one year.....$3
Two Copies one year, or one copy two years.....5
Five Copies one year, and an extra copy to the person sending the club.....$10
Eight Copies one year, do do do 15
Eleven Copies one year, do do do 20

☞ Godey's Lady's Book and Arthur's Home Magazine will both be sent one year for $3,00. To insure that your order being certainly sent, Address L. A. GODEY,
255-2t No 113 Chestnut Street, Philadelphia.

T. S. ARTHUR'S HOME MAGAZINE FOR 1855.

Four Copies a Year for $5.

ENCOURAGED by new efforts by the VERY LARGE INCREASE OF SUBSCRIPTION during the past year, the publishers of the Home Magazine will GREATLY IMPROVE the coming volumes, and add many leading attractions. The work is to be printed on ENTIRELY NEW TYPE, so that its typography will be equal to that of any magazine in the country.

The Home Magazine, during the year 1855, will contain between 800 and 1,000 double-column octavo pages of carefully edited Reading matter. It will, in addition, be largely Illustrated in the best style of Art, with elegant Steel and Colored Engravings, and by several hundred fine wood Engravings of Cities, Scenery, Remarkable Places, and objects in Science, Art, Natural History, Needle-work, the Latest Fashions, Articles of Dress, &c.

ALL FOR $1,25 A YEAR, IN CLUBS OF FOUR SUBSCRIBERS.

The Cheapest Monthly Magazine in the World!

The Editor refers to the literary character and quality of the work in the past for what it will be in the future—he pledges himself to keep its pages free from everything that is ill-natured, profane, or vulgar; while, at the same time, he will seek to impart thereto the highest possible degree of interest.

It is designed especially for HOME READING, and embraces articles covering the widest range of subjects. Fiction, History, Biography, Philosophy, Science, Wit, Anecdote, Travel, &c., are blended with care and discrimination.

The Editor's own pen will be busy during the year, and furnish, as heretofore, stories, sketches, and one or more original nouvellettes.

TERMS:

One Copy for one year.....$2,00
Two Copies " " 3,00
Three Copies " " 4,00
Four Copies " " 5,00

☞ All additional subscribers beyond four at the same rate: that is $1,25 per annum.

☞ Where Twelve Subscribers and $15 are sent, the getter up of the Club will be entitled to an additional copy of the Magazine.

☞ The January number will be ready early in December. *Specimen numbers furnished to all who wish to subscribe or make up clubs.*

☞ PREMIUMS.—A variety of liberal premiums are offered. Among these is a library of 200 volumes for the largest number of subscribers sent in by the 5th of April next: 100 volumes for the next highest list; 75 volumes for the next; 50 volumes for the next, and a handsome Family Bible for the fifth highest list. Besides, there are special premiums for all who fail in obtaining any of these, according to the number of subscribers sent.

For full or particulars address me (post-paid,) at Belleville, Jefferson Co., N. Y.

242-1mow E. G. COOK.

CARLISLE SEMINARY.

(MALE AND FEMALE:)

REV. JAMES DOUGLASS, A. M. Principal,

ASSISTED by a large corps of able and experienced Teachers, filling every department of instruction.

This institution is located at Carlisle, Schoharie Co., N. Y., 30 miles west from Albany, and 12 miles south-east Canajoharie. The buildings are new and of sufficient capacity to accommodate over 300 boarders. They are situated in the midst of a beautiful grove of some ten acres of ground belonging to the Seminary.

Carlisle is a pleasant, healthy and retired village, and contains no hotels, saloons or groceries where intoxicating liquors are sold.

INTERNAL ARRANGEMENTS.

There are six large recitation rooms, six music rooms, a commodious chapel, rooms for literary societies, a reading room, library, a large and convenient room for Oil Painting with sky and side lights, bath rooms in connection with each department; and five flights of stairs all connecting with outside doors and accessible from any part of the building, thus affording ample opportunities of escape in case of fire. The whole is warmed by furnaces in the basement, thus obviating the danger and inconvenience of having stoves in the rooms—but at the same time keep an equal temperature throughout the halls and rooms. Students are never exposed to draughts or cold air, as they are not required to go out of the building in passing to the recitation rooms, chapel or dining hall. The rooms of the students vary in size from 10 by 14 feet to 15 by 16 feet, and are furnished with a movable register in the floor, and also with a ventilator, by which means each student may graduate the temperature of his own room at pleasure. In addition to the above conveniences, the institution employs servants to carry water to and from the several halls, trim the lamps and do the extra cleaning of the Students' rooms.

BOARD.

We intend the board shall be decidedly superior to that which is afforded in other boarding schools, thus removing the reproach too often, in many cases too justly connected with them.

BOARD OF INSTRUCTION.

In the selection of Teachers, the Trustees have spared neither pains nor expense. Every department of instruction is filled by Teachers of superior qualifications—experience and success in their profession. Students completing a prescribed graduting course will receive Diplomas.

DISCIPLINE.

The students of both departments are under the constant supervision of the Principal, Preceptress and Teachers—all at the same table with them, are accompanied by them to church and on their excursions, and are instructed concerning the social proprieties as well as the duties and obligations of life. No intercourse whatever is permitted between the two departments except in the public parlor with the permission of the Principal and Preceptress. No gentleman is allowed to visit a lady in her private room.

EXPENSES.

Board, with washing, fuel, and room, furnished with good mattress bed and bedding, table, chairs and stools, wash-stand, wash-bowl and spitoon, water-pitcher, tumblers, window curtains, clothes-screen, pail, lights, consisting of lamps already trimmed, &c., per week.....$2,00

TUITION GREATLY REDUCED.

Tuition for all branches, including the Higher Mathematics, Algebra, Geometry, Surveying and Civil Engineering, Ancient and Modern Languages, per quarter.....$6,00

EXTRAS.

Lessons on Piano, Organ or Melodeon, per quarter, 8,00
Use of Instrument, 2,00
Lessons on Guitar, 6,00
Use of Instrument, 2,00
Lessons on Violin, 5,00
Oil Painting, 6,00
Drawing and Painting (in water colors) each... 3,00
Crayoning, Monochromatic and Grecian Painting, 8,00
Ornamental Needle Work and Worsted Flowers, each, 3,00
Ornamental Leather Work, 3,00
Paper Machie, (materials furnished,) 5,00
Shell Work and Tissue Flowers, each, 3,00
Wax Fruit and Flowers, 4,00
Pastel Painting, 4,00
Vocal Music, 1,50

☞ All bills must be paid in advance at the commencement of each quarter.

TERMS AND VACATIONS.

The academic year is divided into two terms of twenty-two weeks, and each term into two quarters of 11 weeks each. The next quarter commences on the 23d of November—continues 11 weeks, and is succeeded by a vacation of two weeks. The second term commences on the 22d of February, continues 22 weeks, and is succeeded by a vacation of six weeks.

CONVEYANCE FREE.

On the 22d of November, at the commencement of the next quarter, Students will be received at Palatine Bridge or Canajoharie, and carried to Carlisle free of expense.—Students are received at any time during term—new classes being formed as circumstances require, and are charged tuition only from the time of entering.

An express leaves Canajoharie for Carlisle on Tuesday, Thursday and Saturday of each week at 1 o'clock, P. M.—A stage (the Cherry Valley stage) leaves Albany, corner of State street, and Broadway, Museum Buildings, at 7 o'clock A. M. on Monday, Wednesday and Friday of each week, arriving at Carlisle in the afternoon of the same day.

S. P. SHIBLEY, Pres't.
Geo. Brown, Sec'y. 252-4t

TRUNKS AND VALISES.

THE subscriber would inform the citizens of Rochester and the public generally, that he is manufacturing extensively, a very superior article of sole leather and steel spring Trunks, which he will guarantee to be equal to anything made in the United States.

You may see at PRITCHARD'S Trunk Depot and Sales Room, 78 State street, 1650 Trunks and Valises, and he is now adding to this large stock from 125 to 150 per week—among which you may find Trunks varying from one dollar to fifty. If you should want anything in his line, give him a call, for his motto is, "Large sales and small profits."

A. B. PRITCHARD, No. 78

Poetical.

SOULS, NOT STATIONS.

Who shall judge a man from manners?
Who shall know him by his dress?
Paupers may be fit for princes,
Princes fit for something less.
Crumpled shirt and dirty jacket
May be clothes the golden mine
Of the deepest thoughts and feelings—
Satin vest could do no more.

There are springs of crystal nectar
Ever swelling out of stone,
There are purple buds and golden,
Hidden, crushed and overgrown.
God, who counts by souls, not dresses,
Loves and prospers you and me,
While he values thrones, the highest,
But as pebbles in the sea.

Man upraised above his fellows,
Oft forgets his fellow, then;
Masters—rulers—lords remember
That your meanest hands are men!
Men by labor, men by feeling,
Men by thought and men by fame,
Claiming equal rights to sunshine
In man's manhood name.

There are foam-embroidered oceans;
There are little weed-clad rills,
There are little inch-high saplings,
There are cedars on the hills,—
But God, who counts by souls, not stations,
Loves and prospers you and me,
For to him all vain distinctions
Are as pebbles in the sea.

Toiling hands alone are builders
Of a nation's wealth and fame;
Titled laziness is pensioned,
Fed and fattened on the same,
By the sweat of other's foreheads,
Living only to rejoice,
While the poor man's outraged freedom
Vainly lifteth up its voice.

But truth and justice are eternal,
Born with loveliness and light,
And sunset's wrongs shall never prosper,
While there is a sunny right;
And God, whose world heard voice is singing
Boundless love to you and me,
Will sink oppression with its titles,
As the pebbles on the sea.

Rural Sketch Book.

(For Moore's Rural New-Yorker.)

THE STUDENT'S CAREER.

A TALE OF EVERY-DAY LIFE.

BY EDWARD WEBSTER, ESQ.

[Concluded from page 372.]

THERE is an old and familiar adage, that the course of true love never did run smooth; but whether or not the proposition is founded in fact, we are incompetent to say; one thing is true, however, to wit., that roar and chafe as the tide may in its channel, encountering rocks, breakers and cataracts, flanking bold promontories, and plunging through narrow gorges, it usually finds rest at last in the bosom of the matrimonial sea. Storms may arise afterwards to ruffle its surface, the ebbings and flowings of prosperity and adversity may keep the waters in perpetual agitation, but its aspect is still sufficiently enticing to woo from the harbor of single-blessedness the adventurous barks of the great majority of mankind.

SOLOMON WILLIAMS and ELIZABETH AIKEN, (that was the name of his early, but not forgotten, love,) managed to come to an understanding in some way, inexplicable by us, during the interval of his teaching the Union School. Strange to say, the unfortunate circumstances were explained away, the broken thread of their intercourse again united, and the original acquaintance recommenced precisely at the point where it had previously been interrupted. SOLOMON'S resolutions to resist the gentle influences of the other sex, and to live the stern, cold life of an anchorite, melted away like the fall of a light spring snow before the genial rays of a vernal sun. When the year of teaching had expired he bade adieu to the girl of his heart with much more buoyant feelings, and much brighter prospects for the future than he had done on the previous occasion, and betook himself again to his College studies and preparations for the acquisition of baccalaureate honors. The last two years of his course were less marked by the stern lessons of adversity than his previous ones had been, and he came out at the end of his course with considerable eclat. Diploma in hand, he was now prepared to enter upon the great battle of life—a battle which, in his opinion, was already won. The goal at which he aimed had been reached; the limit which bounded his vision had been attained, and he fondly, but mistakenly, supposed that now he had only to step over the line and enter into possession of the promised land. He had, it is true, encountered some severe obstacles, and overcome them; but he had now to enter another field, where men in active life are running the great race and striving to outstrip each other. SOLOMON was not entirely devoid of imagination; the stern discipline of the schools had not swept away the propensity to build castles in the air, and to people them with bright and glorious beings; the lessons he had learned in the struggle with adversity had not taught him that the dusty thoroughfare of human life is a rugged road throughout its whole extent, and not altogether up hill in the beginning, and down hill in the end. Hence he had concluded that the hill of science once being surmounted, or at least that pinnacle on which the foundations of the College rested, the remainder of the journey would then be comparatively easy. He had promised himself a successful and honorable career in some one of the professions, and with BESS as a companion on the journey of life, to go forward unimpeded by the drawbacks which had hitherto clogged his progress.

She, however, although with the rest of her sex, not being permitted by the wisdom of the present generation, to tread side by side with him the pathway of science, shook her head at some of the glowing pictures which he drew, and modestly suggested that all the difficulties were not yet overcome. The professions, she said, were full already; the *ground floor at least was full*, and, although there was plenty of room above, and the higher one went the more room there was, yet it required continual climbing to mount the ladder which leads to eminence and consequent prosperity. There was one profession, she added, to which he seemed well fitted, and in which he had already considerable experience, and that was the profession of a teacher. It was an honorable and useful calling, and one continually rising in an enlightened public estimation. In that, if he were earnest and true to himself, as he had thus far been, he might hope to enter at an earlier day upon at least a moderate realization of his dreams.

SOLOMON rather dissented from these views. Examples of eloquent and learned Divines listened to by brilliant and fashionable congregations, and established in beautiful parsonages, with salaries sufficient to supply every want; distinguished Counsellors, whose extensive practice brought them an income equal to that of the President of the United States; skillful Physicians, who held in their hands the keys of life and death, and were waited upon and honored by the whole community, presented themselves to his mind; but he could not shut out, at the same time, the long and wretched catalogue of humble but faithful ministers, whose reward for their labors and privations here, must be looked for in a future and a better world; the black list of mean and contemptible pettifoggers, who eked out a miserable existence by subterfuge and lies, and who never fared better than when the community was involved in the miseries of litigation and strife; the innumerable horde of pathologists, with the prefixes of Alo, and Hydro, and Homœo, who could live much better, and do their age and generation a much greater amount of good if engaged in some manual employment, than dealing out pills either in infinite, or infinitesimal quantities.—All these marched before his mind's eye in a gaunt and haggard train, causing his heart to shrink from the encounter with the difficulties that stood between him and eminence in any of these callings.

There were not wanting, it is true, instances of unsuccessful teachers; men who labored in the ranks and got a soldier's pay and rations merely. Neither were the examples of successful teaching so brilliant nor so well rewarded as those in the other professional departments; but the average of success was much greater, and although the prizes were less splendid when once drawn, there were at the same time a far smaller number of blanks. Besides, SOLOMON was now prepared to enter upon that line of duties, whereas in the other professions there would yet be before him at least three years more of preliminary study.

"Three years more of preliminary study!" he mentally ejaculated, "before I begin, and then I shall have to commence at the bottom of the ladder! I shall be gray with age—— and BESS too," he added after a pause, "before my efforts can be crowned with any kind of success." That idea settled the question, so he turned himself resolutely to the profession of a teacher. But a District, or even a Union School, was not sufficiently dignified for a man who carried a diploma in his pocket. It might answer for a Sophomore, such as he was when he taught last, or for a Normal School graduate; but for an A. B. such a situation would never answer.

There are scattered through the land in many of our inland villages, *Academies* so called; at least buildings dignified by such a name have been erected with the laudable intention of providing the means for a liberal course of study to the youth of the vicinity; but passing half way in the good work under the mistaken idea that such an institution can be self-sustained, the founders have left them unendowed to maintain, for a few years a sickly and struggling existence, and then expire. Fitful and spasmodic efforts are made from time to time to resuscitate them, but without any lasting or beneficial effects until finally the buildings are permitted to stand unoccupied or else are appropriated to some other and less noble purpose.

SOLOMON undertook the impossible task of awakening into renewed life one of these defunct institutions. He refitted and repaired it on credit, hired a competent female assistant, and commenced operations in the fall. The first two terms were tolerably successful, but as the warm spring weather came again, and the snow melted from the hills, the sons of the neighboring farmers withdrew one by one from the school, in order to recommence the labors of the year. The gains of the winter were utterly absorbed by the expenses of the succeeding summer, and as the close of the academic year approached the Principal found himself worse off pecuniarily than when he began. He kept up appearances, however, until the close of the school, and then withdrew thoroughly discouraged and disappointed. What added greatly to his disquietude, was the fact that he had promised BESS to make her his wife that fall. The consummation of this engagement had long been delayed, and he felt it was an act of injustice to her to postpone it beyond the earliest moment when he could furnish her a comfortable home; and he had flattered himself into the belief that he would be able to do so at the close of the year. Now, however, all his bright dreams had vanished into thin air, and the realization of his hopes were as far off as ever.

He was sitting in his room in a very melancholy mood, brooding over his disappointments, and about making up his mind to write to his intended wife, that their marriage must be deferred, perhaps indefinitely, when an early college friend burst abruptly into his room and seizing him by the hand, exclaimed,

"I am glad to greet you once more old friend! it seems an age since we parted on the steps of the old hall. I have taken a different turn from college students generally, abandoned all ideas of a profession, and gone into trade. The old gentleman, my father, although as you know, he stinted me rather closely in college, has funds enough when he is disposed to bring them out. He seems to have become convinced that I could take care of money as well as himself, and offered me half the profits of his hardware store in case I would enter in and look after the business. It is a profitable concern, and by the inventory just taken we have cleared three thousand dollars the present year. Fifteen hundred dollars clean cash for my share is not a bad start in the world."

"No, indeed!" responded SOLOMON.

"But why do you appear so sombre? One would suppose you was attending the funeral of a friend instead of greeting him fresh and hearty in the flesh! Has anything gone wrong with you?"

"Yes," said SOLOMON, "all wrong; there seems in fact to be no right so far as I am concerned. You are a good friend of mine, STEWART, and have shown yourself so on many occasions ere this, so you must pardon me if I bore you with the story of my griefs. The fact is, I have promised the girl of my heart to make her my wife within three weeks——"

"And that is why you look so solemn?" interrupted his friend; "and a good reason for it too, I should say."

"No, not the marriage, abstractly considered, but the concomitants. The fact is, I would not have even five dollars to pay a clergyman for performing the ceremony, if all my debts were paid. My school has been an absolute failure in a pecuniary point of view, and I cannot think of assuming the responsibilities of a married man, without the means at least prospectively, of supporting a wife. It is too bad! BESS has waited long and patiently for me, until, indeed, people begin to say I will never fulfill my promises to her. She knows me better, however, thank God!"

"You must leave this old roolery at once," again broke in his friend, "and go with me. I am one of the trustees of the Union School in our village, and have come here on purpose to engage you as principal, at a salary of seven hundred dollars a year. Marry your girl at once, and employ her as an assistant, which will give you an additional income of two hundred and fifty dollars. If you wish for a loan to consummate your matrimonial arrangements, here are one hundred and fifty dollars; take it and pay me again when you can."

Tears sprang to SOLOMON'S eyes at the generous offer, and he availed himself of it at once in part. Taking a hundred dollars of the proffered loan, he left next day with his friend, engaged the school, and then hurried away to the home of ELIZABETH. She entered readily and cheerfully into the arrangement, and in a couple of weeks assumed the double duties of a wife and teacher; both of which she fulfilled for three years to the satisfaction of all concerned. At the end of that time, in consequence of SOLOMON'S reputation for learning and ability, backed by the influence of his college friend, he obtained the appointment of Principal in the public High School in the flourishing community of G——, with a salary of a thousand dollars. No longer compelled to call into requisition the assistance of his wife, he placed her in the position he had so long coveted for her, viz., that of mistress in a contented and happy household. He cherished a feeling of lasting gratitude towards those friends who lent him their disinterested aid and friendship during his hours of trial and despondency, and, in comforting and assisting others in like circumstances, he has ever striven to return to the race, if not to the individuals, an equivalent for the benefits received. Judge then of the pleasure he experienced when, on returning home one evening during the late cholera season, he ascertained that his excellent wife was instrumental, under the favor of heaven, in saving the life of his dearest friend, STEWART, who had been stricken down in the street by the terrible disease. The circumstances of that event have been heretofore detailed, under the title of "The Cholera Patient;" at which time an explanation of the cause of the close friendship existing between the invalid and his preservers, was promised to the readers of the RURAL; has that promise been redeemed?

Youth's Corner.

ILLUSTRATED REBUS, NO. 47.

☞ Answer in two weeks.

(Written for Moore's Rural New-Yorker.)

MISCELLANEOUS ENIGMA.

I AM composed of 15 letters.
My 1, 15, 11, 6, 7, is a beautiful fish.
My 2, 5, 13, 14, 4, is a substance collected through great industry.
My 4, 14, 6, 1, 8, is a happy period of life.
My 5, 7, 1, 14, 12, is an animal hunted for its furs.
My 10, 12, 3, 9, 7, is an ornament worn at military parades.
My 13, 5, 15, 7, 2, is one of the 32 points of the compass.
My 10, 8, 3, 9, 7, 13, 6, 1 is a fruit of peculiar flavor.
My whole is an interesting feature of Moore's RURAL NEW-YORKER.

North Wobarn, Mass., 1854. J. W. B.

☞ Answer next week.

CHARADE.

My first is beauteous, and in pride gives birth;
My second is the meanest thing on earth;
Though one most vile, the other precious reckon'd
My first owes all its being to my second;
My whole the theme of Grub Street bards—no bride
Yet law the wedlock she does not provide;
A manua-maker, yet doth ne'er a pin stir,
And will forever be a noted spinster.

[*Blackwood's Mag.*

Answer to Enigma in No. 46.—*Cheat.*

Wit and Humor.

YESTERDAY morning, on awakening, a well-known citizen said to his wife, "are not man and wife one?" The reply was—"certainly, my dear." "Then," responded he, "all I have to say, is, that you came home precious drunk last night."

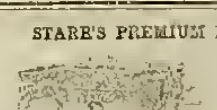
IT is not a little singular that the letters that spell *debt* are the initials of the sentence "Dun Every Body Twice"—and the letters that spell *credit* are the initials of the sentence, "Call Regularly Every Day—I'll Trust."

AN Irishman being in church where the collection apparatus resembled election boxes, on its being handed to him, whispered in the carrier's ear that he was not naturalized, and could not vote!

"IF you can't keep awake," said a preacher to one of his hearers, "when you feel drowsy, why don't you take a pinch of snuff?" The shrewd reply was:—"The snuff should be put in the *sermon*."

A DUTCHMAN thus describes the New Yorkers:—"Fine peobles; dey go about der shtreets all day cheating each oder, and dey call dat pizziness."

STARR'S PREMIUM PIANO FORTES.



EVERY person in this vicinity, desirous to purchase a Piano Forte, will be *more than paid* by visiting my rooms, where he can *buy directly from the manufacturer*, and be consolidation of an agent, and select from the largest assortment in Western New York, as I have constantly on hand from 15 to 20 finished instruments, and from 50 to 100 others in process of construction, of various sizes, patterns, and prices, from $225 to $500 each. They combine such a combination of excellence, in their beauty, health, strength, (to keep in tune,) exquisite touch—rich, deep, rich, full and melodious tones—as induces the belief, in often expressed by those who have bought, or would have, that "they surpass all others in the market!" Their superiority was acknowledged when in one of the most full and fair musical contentions which ever acted on a similar occasion, *awarded us the three highest premiums*, when in competition with Chickering, Gilbert, Bacon & Raven, Wm. Hall & Sons, at the New York State Fair for 1851.—And the number since sold, with their daily *increasing celebrity*, fully justifies the report of that committee. They are manufactured of the best materials, in the most perfect manner, with metallic plates upon the Iron Chordal scale, with the Iron Bason Bumper, and French Grand Action, *expressly for retailing*—(numerous applications at wholesale, being courteously refused,) and can only be had at my rooms, where the instruments will be shown, and all orders promptly attended to. As it is fully settled that a *good Piano is cheap at almost any price*, and a poor one only a nuisance; and as I rely alone upon their merits to secure them favor with the public, I invite for them, the most careful examination and scrutiny, by all who wish to buy at my manufactory and show rooms, Nos. 45, 47, 49 & 51 Orphean Buildings, Main st., 2d Floor. Every instrument will have upon it the name of the subscriber, and be *warranted to please the purchaser*.

Rochester, June, 1854. FREDERICK STARR.

RARE SEEDS AT LOW RATES—BY MAIL.

THE subscriber has a variety of choice seeds, of which he will send, *post-paid* by mail, a rare, or all one kind for 6 cents, 4 varieties for 25 cts., 12 varieties for $1, and any larger number in same proportion. Among his seeds are the following:

MELONS.—White Mexican, South American, Red Mexican, Georgia, Bradford's, McKee's Mammoth, Ice Cream, Mountain Sweet, Winter, Martin's, Apple Seed, and the Virginia and Jenny Lind Pittons or Cantaloupes.

CUCUMBERS—Negley's Seedling, Prolific Black Spine, and Two-leaf.

SQUASHES.—Custard, Sweet Potato, Turban, Striped, Folk, Marrow, Apple, Nantz' Scallop, and some others without names.

PUMPKINS.—McKee's, Cape Cod Sugar, and Extra Sugar.

BEANS.—Golden Eye, Bunca Flax, Stringless Pole, Three-foot, Yellow Six-weeks, &c.

PEAS.—Prolific Dwarf, Queen of Dwarfs, May, English, Wrinkle, Japan and Oregon.

CORN.—Improved Dutton, Chicago Eight-rowed, Georgia, Rice, Evergreen, Old Colony, Darling's Extra Early Sugar, Hills Sugar, Calico Flour, Rocky Mountain, Chocolate, &c.

TOMATOES.—Mammoth Red, Purple Skin, and Grape.

Also superior sorts fine Head *Lettuce*, Black Spanish *Radish*, Double *Sunflower*, Cape *Gooseberry*, Variation *Clover*, *Rape*, &c.

When orders are received that cannot be filled, the money will be promptly returned, free of expense. Send current Bank bills or postage stamps, and address (post-paid) T. E. WETHERBE,
251-3tdaw North Cannon, Kent Co., Mich.

KEDZIE'S RAIN WATER FILTERS.

MANUFACTURED BY
J. E. Chenoy & Co., Rochester, N. Y.

THE use of water impregnated with lime and other mineral substances, in the opinion of all medical men, is one of the chief exciting causes of many diseases incident to the rapid climate of this country.

These Filters have been fully tested, for many years, by hundreds of families in this city and in various parts of the country, and have in all cases given the highest satisfaction.

Rain water, of whatever color, taste, or smell, by this means becomes as clear as crystal. 229-1mif

FARMERS' AGENCY.

BEING a Practical Farmer, and having considerable experience in the selection and use of Farm Implements, and living in the vicinity of Alexandre Seed and Implement Store and Agricultural Implement Manufactories, and extensive Nurseries of the choicest fruit and ornamental trees and knowing the difficulties that farmers have to contend with in the selection of these in the busier seasons of the year, I will select, purchase and carefully forward any thing in the above line for a small compensation. Satisfactory reference given in all cases when required, and the money promptly returned in all cases where the wishes of the send it cannot be complied with. 232-1mif

Address I. A. CLARK, Macdon, Wayne Co., N. Y.

FARM FOR SALE.

SITUATED in the village of Hungerford Falls, 120 rods from the Depot of the Canandaigua and Niagara Falls R. R. It contains 104 acres—15 wood-land, the remainder in a high state of cultivation—is watered by living springs, has an orchard of 100 trees, and suitable buildings in good repair. Terms liberal, as it will be sold to close the estate. Apply on the premises to
248-4teow* HRS. CATHERINE SANFORD.

☞ Mr. C. MOORE, of Gerry, Chau. Co., is authorized to act as Agent for the RURAL NEW-YORKER, and for the WOOL GROWER AND STOCK REGISTER, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

THE WOOL GROWER AND STOCK REGISTER.

VOL. VI.—ENLARGED AND IMPROVED!

THE WOOL GROWER AND STOCK REGISTER is the *only* American Journal devoted to the important and profitable branches of *Wool and Stock Husbandry*. It contains a vast amount of *useful* and *reliable* information on the above and kindred subjects, and should be in the hands of every owner or breeder of Sheep, Cattle, Horses, Swine, or Poultry—whether located East or West, North or South, for the most of the matter given in its pages is equally adapted to all sections of the Union, the Canadas, &c. The Sixth Volume, commencing July, 1854, will be

Enlarged to 32 Octavo Pages Monthly!

And Improved in both Contents and Appearance. Among other matters of interest to Wool Growers, Breeders, Graziers, Dairymen, &c., the new volume will contain PEDIGREES OF PURE-BRED Cattle, Horses, Sheep, etc., and the Names and Residences of the principal Breeders and Owners of Improved Stock throughout the country. It is published in the BEST STYLE, and ILLUSTRATED WITH MANY ENGRAVINGS—including Portraits of Domestic Animals, Designs of Farm Buildings, &c., &c. The careful REVIEWS OF THE WOOL AND CATTLE MARKETS, given in each number, are alone worth many times the price of the paper.—To Wool Growers this feature is invaluable.

TERMS—Only Fifty Cents a Year; Five Copies for $2; Eight for $3,—*in advance*. Any additional number at 37½ cents per copy. Club papers will be sent to different post-offices, if desired. ☞ Back volumes (well bound in paper, for mailing) furnished at above rates.

☞ NOW IS THE TIME TO SUBSCRIBE and form Clubs. Money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER,
IS PUBLISHED EVERY SATURDAY,
BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the RURAL is but 3½ cents per quarter, payable in advance, in any part of the State—and 6¼ cents to any part of the United States,—except Monroe County, where it goes free.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or less words,) or 15 cents per line—*in advance*. The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar Journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

VOLUME V. NO. 48.} ROCHESTER, N. Y.—SATURDAY, DECEMBER 2, 1854. {WHOLE NO. 256.

Moore's Rural New-Yorker:
A QUARTO WEEKLY
Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANTS AND CONTRIBUTORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for 6 months, in advance. For reduction to Agents, and those who form Clubs, see notice on last page.

ADVERTISEMENTS,—If brief and appropriate, will be inserted at 15 cents a line, each insertion. ☞ No Patent Medicine, or deceptive adv'ts, published on any terms.

Rural New-Yorker.

Progress and Improvement.

HINTS ON THE BREEDING OF FOWLS.

If not already done, now is the time to look over your lots of fowls, and to carefully select out the hens and roosters designed to be kept for breeding next year. The fecundity of hens affords the breeder great facilities for improving the breed, but how seldom does he take advantage of them. To make any decided improvement in a breed of horses, cattle, or sheep, requires more time than most go-ahead Americans—who are ever ready to pull up stakes, and sell out for a "consideration"—are willing to bestow. In fact, the bare idea of spending half a life-time in perfecting a breed of animals, would be enough to frighten them from the undertaking. Hence we shall probably continue to import the pure breeds of cattle originated by more plodding nations.—But with fowls, the length of time required need not deter any one from attempting to improve the breed. By careful and judicious selection, any farmer—or, we would rather say, any farmer's son—may, in two or three years, add a hundred per cent. to the good qualities, and correct most of the deficiencies, of his present breed of fowls—unless indeed, they are already much better bred than the ordinary fowls found in farmers' yards in most parts of the country.

In this country, and even still more so in Great Britain, fowls have been looked upon as beneath the serious consideration of the farmer. But this is far from being the case. There is no other item on a farm that foots up more net profit than a good breed of properly kept fowls. This is a fact gradually taking possession of the public mind, (thanks to the agricultural press and—though we do not fraternize with them—the chicken speculators,) and we shall ere long witness a decided improvement in the common fowl of the country.—For, without taking into consideration the improvement caused by the introduction of Asiatic and other foreign breeds, the stimulus of high prices and good profits has directed the attention of farmers to their common breeds, and it cannot be doubted that if they once take hold of the matter in earnest, greatly beneficial results must speedily follow, and that without the introduction of any foreign blood.

Now is the time to take this matter in hand. Select out hens under four years of age, having reference particularly to a healthy and vigorous constitution, large, well formed bodies, and rather small legs and feet, bright eyes and pendant combs. Early maturity and good laying qualities must not be forgotten. The form is a good indication of the former, and also, to a certain extent, of the latter. If early maturity, beauty of form and refinement are carried too far, the tendency to lay eggs is supposed to be diminished. If a hen is known to be of an uneasy disposition, or a poor layer, on no account keep her.

Having selected what hens you intend to keep for breeders, it will be advisable to sell off all the others now, so that the remainder may be better fed during the winter. It is vain to expect abundance of eggs next spring if the hens are starved during winter. A few hens well fed will always prove more profitable than a large number half-starved during a few months of the year, even though they may have a superabundance of food at other times. See, too, that the hen house is warm and *dry*. Hens, like sheep, can stand anything better than water. Let the hen house be thoroughly cleaned out now and regularly supplied during winter with clean, dry straw.

If you design to change one or more of your roosters, now is the time to do it. They will thus have abundant time to get acquainted with their partners before spring. In selecting a rooster we should not look so much to beauty of outline, as to a vigorous and valiant demeanor, strong, muscular thighs, full breast, and plump, heavy body, having more muscle than fat. Color is a mere matter of fancy. While fowls are supposed by some to be delicate; but this has not proved so in our experience, though it is probable, as a general thing, that colored fowls are the hardiest.—White or bluish legged fowls are the favorites with some, from the whiteness and apparent delicacy of the meat; but it is admitted that the yellow legged are the richest and most highly flavored.

If a little flesh meat can be cheaply obtained during winter the fowls will be all the better for it. It is a tolerably good substitute for the worms and insects they obtain in warmer latitudes. Be very careful, however, not to give them any salt meat, as it always proves injurious and sometimes fatal. There can be no doubt that salt is not required by fowls in larger quantity than that obtained as a constituent of their ordinary food. They must have access to fresh water, and if they cannot find enough food from the scatterings of the barn yard, must be fed as the judgment of the farmer dictates.

GUANO AND SUPERPHOSPHATE FOR CORN.

THE *American Agriculturist* publishes, from an anonymous correspondent, the results of an experiment with artificial fertilizers on corn. The soil was a gravelly loam, sward, and plowed about the 20th of May. The quantity of land allotted to each experiment is not stated. This is to be regretted. The fertilizers and crop are *calculated* to the acre.

The unmanured plot yielded 28 bushels per acre; that dressed with 15 loads stable manure, 35½ bushels; 500 lbs. superphosphate of lime, 46 bushels; 690 lbs. guano, 50½ bushels; 300 lbs. of superphosphate of lime and 640 lbs. guano, 58 bushels; 320 lbs. of guano and 640 lbs. of dissolved bones, (bones decomposed by sulphuric acid,) 51 bushels; 1,040 lbs. guano and 400 lbs. of superphosphate, 74¾ bushels; 10 tons stable manure and 640 lbs. of superphosphate 49½ bushels.

The effect of an application of a good superphosphate of lime on Indian corn, is what we have long desired to see, as much for scientific as for practical reasons. The above experiments lead us to hope that superphosphate at a reasonable price would prove a profitable fertilizer for corn in the New England States, where it generally sells for at least one dollar per bushel. Thus the retail price of a first class superphosphate in England is $30 per ton. Five hundred lbs. of superphosphate in the above experiment give an increase of 18 bushels. We should get, therefore, an extra bushel of corn for 42 cents. We must not, however, allow ourselves to deduce too much from the result of a single experiment. The cost of the superphosphate here, however, is $50 per ton, and the 18 extra bushels cost $12 50, or 70 cents per bushels. The 690 lbs. of guano give an increase of 22½ bushels. At $50 per ton, therefore, 77 cents worth of guano gives an extra bushel of corn. The experimenter thinks that this will pay. Of course it depends on the price of corn.

Assuming that the experiments are correct it becomes an interesting inquiry as to what particular ingredients of the manures the increase of corn is due. The superphosphate of lime used contained say two per cent of ammonia and 18 per cent soluble phosphate of lime. The guano, if a good article, contained 16 per cent of ammonia and 25 per cent of phosphate of lime, a considerable portion of which would be soluble. Now in the above experiment the superphosphate gives as much increase as the guano, or, in other words, two per cent of ammonia and a certain quantity of phosphate of lime give as much increase as 16 per cent of ammonia and a certain quantity of phosphate of lime. It follows, therefore, that the increase must be attributed principally to the phosphate of lime. Oh, for accurate experiments to determine whether this is so or not. Why cannot some friend of scientific agriculture apply sulphate of ammonia on one acre of corn, and *pure* superphosphate of lime on another, sulphate of lime on another, and a mixture of the three in definite proportions on others, and determine the matter.

JOHNNY-CAKE PHILOSOPHY.

THE CORN CROP.—The only objection that can be legitimately urged against this crop, or that militates against its unlimited extension, is the want of a market. It is not of near such universal use as wheat, in the economy of life for human subsistence, and, therefore, if the great wheat region should depend upon it as a paying production, the market would be glutted; but it might and ought to be greatly extended as human food. It is more nutritious, more healthy, and easier, and with more certainty produced, than any other of the edible grains.

Who in traveling in a new country, where almost the only food raised is corn and potatoes, has failed to observe the iron sided, strong-sinewed men, and the ruddy and healthy women and children—barefooted and half clothed—defying the snow and winters' blast, so redolent of health that it is painful for *white bread and sweet cake* humanity to look upon them?

There are hundreds of families who grow this crop almost exclusively for the *hogs*.—What a profanation of the blessings of Providence! What a loss of health, happiness, and money, especially in these times of the infliction of the weevil in wheat and the enormous price of flour. Why is it that the Indian pudding both baked and boiled—the warm loaf of Indian or wheat and Indian bread—the Pone, the Johnny and Pan cake are almost banished from our farmers' tables?

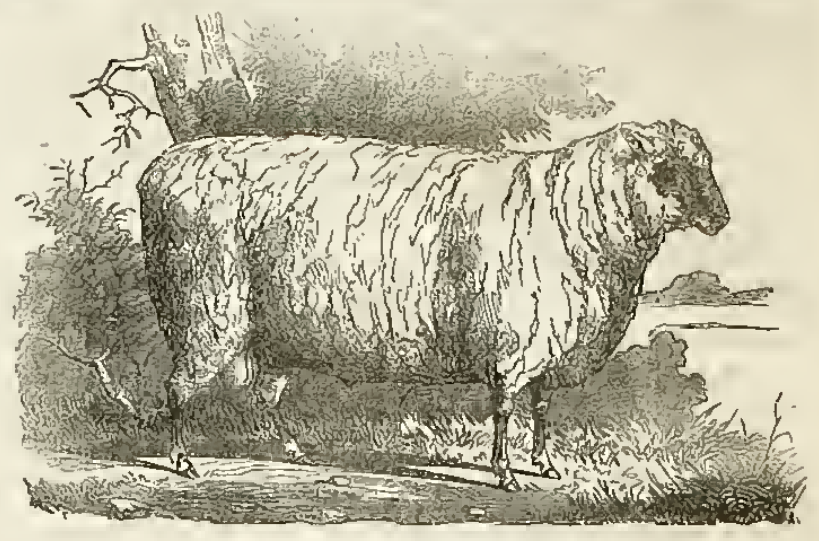
Our food is now-a-days too concentrated—too rich—too highly seasoned with too many provocatives to over-eating. It over-tasks the gastric economy of the stomach. Our meals lack *bulk* for the extension of the digestive organs and bowels. If our food was half saw dust (Indian meal is better) we should be gainers in health, strength and spirits.

We have sometimes thought that the falling off in the use of meal as a food, was attributable to the house-wife. It requires more care and forethought and perhaps more labor to get up its preparations than wheaten flour, as a larger batch of bread from that material can be made at one time, and last good for several days without any further care; while the other requires labor at every meal; but let the fault lie where it may, it will not be disputed that we do not use in our families in this region, one half the quantity that every prudential consideration would indicate.

If farmers are determined not to incur the name of *corn-fed*, why so be it, yet why the mechanic, the laborer and the destitute, do not increase the use, when subsistence can be obtained for half the money, is most surprising. Economy is as important a virtue as industry.

Look to the meal stores and mills in towns and you will see squalid women and children, buying their three and four pounds of superior flour at an expense quadruple that of meal.—Many of this class will say they do not like it for bread. It is a mere habit and easily conquered, as it was in Ireland during the great famine, when it was with the utmost difficulty it could be introduced; while now in easy times it is one of the staples of our export; only last year every bushel in N. Y. was taken up for Europe. Now, unprejudiced reader, if you think with us, insist on mush and milk twice a week, and baked Indian pudding for dinner three times, and warm Indian bread or cakes every morning for breakfast, and thereby defy the foul fiend and all her train of dyspepsia, diarrhœa, headaches, foul stomachs, and other ills that flesh is heir to—you must eat corn corn but not drink it. So says the

PROMPTER.



SOUTH DOWN SHEEP.

THE most celebrated breeds of the Down sheep are the Sussex, Hampshire and Shropshire. Our personal experience lies chiefly with the two latter breeds, and it is therefore not surprising that we prefer either of them to the Sussex down. We are bound to say, however, that we consider the Sussex the true South Down. By the persevering skill of that celebrated breeder ELMAN, the Sussex Down has been placed at the head of every breed of sheep in Great Britain. It is probably the most perfect, the most refined, or *elaborated* breed of *mutton* sheep in existence. Sussex Down mutton commands the highest price in the London market. The Hampshire and Shropshire Downs are larger and coarser breeds than the Sussex, and as might be expected lay on more fat for the food consumed than the Sussex—at least this has been demonstrated to be the case with the Hampshires, and from considerable acquaintance with the breed, we have no doubt it is the case with the Shropshire. The Shropshire is a more symmetrical sheep than the Hampshire; indeed, compared with the Sussex, the Hampshire is far from beautiful, the head especially is often large and coarse—and the head in all animals affords the best index to character. Nevertheless, the Hampshire is a greater favorite with the great mass of farmers than the Sussex. We are rather surprised that this breed has not been more extensively introduced into this country or the Canadas. We are satisfied that, unless too finely bred, it would prove hardier and yield more mutton and wool than the Sussex.

As an admirer of South Downs, and a lover of South Down mutton, we cannot close our eyes to the fact that the Leicesters, Teeswater, Cotswolds, and other long-wooled and coarse mutton sheep, are evidently becoming the greatest favorites with the farmers of the States and Canadas. (We refer, of course, only to *mutton* sheep.) Lawes' experiments throw some light on the cause of this. He found that for *the food consumed* the large and coarse Cotswold yielded more mutton and wool than the Leicesters, the Leicesters more than the Hampshire Downs, and the Hampshire Downs more than the Sussex Downs.—But the price of their mutton in London is exactly in an inverse ratio to their fattening properties,—the Sussex mutton commanding the highest price, the Hampshire next, then Leicester, and lastly Cotswold, which is sold for at least three cents per pound less than the Sussex Down mutton. In England, therefore, the higher price obtained for the mutton counterbalances the deficiency in rapid fattening qualities. But in this country it is not so. The carcasses of Cotswolds, Leicesters, Teeswaters, Hampshires, and their crosses, under the name of South Down mutton, sell for as much per pound as the best Sussex. It is plain, therefore, that the finer breeds of mutton sheep in this country at present stand a poor chance in competition with the coarse and more rapidly fattening breeds. But we are digressing sadly from the object of our writing, which was simply to introduce to the attention of our readers the accompanying engraving of a beautiful South Down Sheep.

CURE FOR THE POTATO DISEASE.

IT is certainly amusing to look over the back volumes of any of our agricultural periodicals and observe the multitudinous "remedies for the Potato Disease." Many of them are founded on accidental experiments, while by far the greater number are deduced from fanciful speculations in regard to the *cause* of the "Mysterious Dispensation." One observes that the potatoes under trees, or on the shady side of a wall, are not infected, and concludes that shade is a certain cure. Another thinks that his potatoes in the shade were more diseased than those in the sunshine, and recommends an open southern exposure. Cutting off the tops one has found effectual, while another who tried this remedy thinks the potatoes so treated were much worse than those let alone. Ashes scattered at intervals on the growing plants during summer is another favorite remedy; others think lime a certain cure; while charcoal dust scattered in the rows at the time of planting, according to many sanguine observers, has always prevented the rot and produced a large crop of most excellent potatoes. A learned Doctor who for years has been crying aloud that our system of agriculture is all wrong, and that we are exhausting our virgin soil at a fearful rapidity, especially of its potash, appears to find satisfaction in the potato disease as a confirmation of his gloomy forebodings. The ash of the potato says he is one-half potash, and as you have been insanely removing all the potash from the soil, can you wonder that potatoes grown on a soil exhausted of its potash should be diseased? Certainly this is not to be wondered at. The only wonder is that the potatoes would grow at all, and that all soils, new and old, in Europe and America, should happen to become exhausted of potash all in the same year. And it is surprising, too, that soil destitute of potash could produce good crops of turnips (which contain as much potash as potators) or of wheat, corn, clover and timothy. The wonder with us is that, under such circumstances, these were not all diseased at the same time.

But all these various hypotheses are wrong. The real cause and remedy for the potato disease has at length been discovered by a committee of the New Hampshire State Agricultural Society. "There is little doubt in our mind," says the report, "that the potato can be saved from disease by proper cultivation"—This is encouraging. But what has induced the deterioration of the potato plant? "Mainly using *cut* and *small* potatoes for seed, and dressing them with *animal manure*. * * The best cultivators in England always select the fairest and best shaped potatoes for seed, and plant them *whole*." We cannot say what the *best* English farmers do, but we know that

many *good* farmers there always cut their potatoes before planting, and the practice is even more general than with us, from the fact that potatoes are planted in rows and not in hills.

"Vegetable manures" should be used, but "animal manure" must not be brought near the field. To us this appears a very curious distinction. We do not recommend putrescent manures for potatoes, but we are certainly unable to perceive why *well decomposed* ordinary barn yard manure—a mixture of the droppings of the stable, cow-houses and piggeries, with a due proportion of straw—should be any more objectionable than "vegetable manures" or manure made from decayed vegetable matter. In other words, we can see no reason for supposing that a quantity of straw and corn stalks allowed to rot in a heap would furnish more valuable manure for potatoes than the excrements of cows or sheep eating straw or corn stalks. Yet one, we suppose, would correspond with what is meant by "vegetable" and the other with "animal" manures.

It is certainly very desirable that the committees at our State and County Agricultural Societies should be practical men, with a little common sense in their craniums. Such men might give us reports less historical and theoretical, perhaps, than the one we have alluded to, but they could not fail to be far more instructive and reliable. Reports founded on experience rather than on "science, falsely so called."

Communications.

WOODEN CISTERNS.

Eds. Rural:—I notice in your excellent paper an inquiry in reference to rain-water *cisterns*, and, in reply, none but those made of water lime or cement were spoken of. Many city people think that good wooden cisterns are not only better, but in the end cheaper.—Water lime cisterns make the water hard for the same reason that lime stone renders well water unfit for ordinary washing. To be sure the proportion of lime held in solution is not so large; but my cement cistern, now seven years old, makes the water hard enough to curdle soap considerably. By using a large quantity of soap, it of course will suds. It is a very hard matter to make a cement cistern hold in either muck or quick sand. They must have a solid gravel, sand or clay foundation, or the weight of water will settle the bottom just enough to allow it to escape. During the past summer I have replaced some twenty-five or thirty cement cisterns with solid iron bound pine ones, which give the best satisfaction.

One great advantage in having wooden cisterns is that they can be set up in cellars or even in the upper stories of buildings. The Monroe County Work House cistern is some thirty feet above the basement, and this is only one of several dozen that occupy similar positions. Water taken from clean pine cisterns is always sweet and soft. Any ordinary freezing weather does not injure them. If they are thoroughly set in a puddle of blue clay, the clay will hold the water after they have rotted out. It is not necessary, however, to put anything but common dirt around them. Two or three inches of wood ashes packed in around the top for say two feet down, will arrest the process of decay for several years.—A good pine cistern will last, according to the soil in which it is placed, from eight to twenty-five years. D. G. Allino.

Rochester, N. Y.

TOO MANY SHADE-TREES INJURIOUS.

Senator A. B. Dickinson, of Hornby, Steuben Co., N. Y., one of the most extensive and thoroughly practical farmers in the country, in a conversation with the writer a few days since, advanced many ideas which are not in accordance with the received notions of farmers generally, and among them *one* at least that was decidedly distasteful. It was that no farmer can *afford* to keep shade trees elsewhere than by the way side, and hardly there. Mr. D. carries on a number of farms; his home farm consisting of some 2,500 acres, upon which by great expense and labor he has saved a large number of the finest shade trees—but he is now cutting them all down, for he farms for profit, and cannot let them stand. The injury they do to a crop in taking up the moisture for some distance around, and leaving the growing plant to famish, or at best attain but a stinted growth, is least in importance with him. It is mainly in their effect in fattening cattle that his trees have become so obnoxious in his eyes and are falling at the hands of the vandal axe-man.

Mr. D. buys about 1,000 head of steers every spring to fatten on his farm, assigning to each field just the number it will keep during the season, never changing from one field to another. He has two fields of 30 acres each, as nearly alike in the amount and quality of pasture they furnish, as two lots well can be, where he alleges he has by repeated and varied experiments tested the damaging effect of shade. His mode has been to select a sufficient number of cattle of as nearly equal quality as possible for each lot, and in the fall when he came to draw for the market, he has invariably found that while the open lot furnished a goodly number in suitable condition for the first draft, it was not till the second or third drawing that any could be found in the requisite condition as to flesh in the shaded. He has also, by actual weighing found a difference of 15 lbs. per head increase a month in favor of open fields, and avers that, other things being equal, a lot of steers will gain as much in an open field in *four* months of summer as they will in five months in a field where they have access to shade. The cattle in the first instance feed at all hours of the day upon dry and fattening grass instead of standing under the trees, as in the second instance, until driven out by hunger and filling themselves only in the morning and evening with wet, flashy food. And therefore it is that he cannot afford to keep his trees and is having them down.

Mr. D. mentioned that having directed his foreman to prostrate all the shade trees in a certain lot, he returned, saying, "I have cut all but *two*—they are *too handsome*, and cost too much to destroy—if you want them felled you must do it yourself, *I won't!*"—but, added Mr. D., "they must come down."

I could not but think the foreman was in the right of it, and manifested a praiseworthy spirit, and would ask Mr. D., Is *profit* the only thing for which we labor? Is the gratification of *taste* of no account? Shall a landscape made beautiful by groves, and clumps, and isolated trees, be changed to open and arid waste for *money?* And to increase our gain shall we forget to "be merciful to our beasts," and compel the poor animals to roast beneath a midsummer sun? Methinks if the dumb creatures themselves could speak, they would ring in the Senator's ears, in such imploring tones,

"Woodman, spare that tree,
Touch not a single bough,"

as to deter him from further prosecuting his ignoble work. W. B. P.

Prattsburg, Nov 17, 1854.

THE "NE PLUS ULTRA" WHEAT.

For several seasons past, much interest has been excited in this neighborhood, in the result of experiments made by Mr. Harradine, of Needingworth, near St. Ives, Huntingdonshire, in the growth of a new description of wheat, and which, if "it giveth forth its increase" at the rate of multiplication that has attended it hitherto, bids fair to create a revolution in the agricultural world. One ear of it was sown in 1849 on the land of Mr. Harradine, and the produce of this again in 1850 and 1851, when it yielded at the extraordinary rate (especially for those years) of 19 combs 1 bushel and 1 peck per acre, (77¼ bushels.) It has been sown on almost every available description of soil, and introduced in every imaginable change of crops. It was sown after Tartarian oats, clover, seeds, peas, and tares, on soil of various compositions, fen and highland; in all cases the quantity of seed was restricted to four pecks per acre; but the result was the same, the yield reaching that previously realized by Mr. Harradine. It has been sown after wheat, clover, barley, beans, oats, and fallow, and sustained its reputation through these trials; it has been sown in winter and in spring, drill, broadcast, and dibbled, with the same results, some put in in February showing no diminution in the yield. The preparation of the land may be the same as for ordinary wheat, and the same rate of increase in the yield over ordinary sorts may be expected.

With all these facts in view, and there are numbers of gentlemen ready to verify them, Mr. Harradine is fully justified in naming this wheat the "*Ne Plus Ultra*," worthy as it is of being the chief occupant of the cornucopia of Ceres. Specimens have been forwarded to us for inspection; and if we may judge by the number of standards and ears springing from one root, we cannot doubt that the yield is as described. One kernel set by Mr. Harradine produced twenty-five standards; and this root, with a similar number of ears and their multiplicity of kernels, may be seen at the stand in the Crystal Palace of Mr. Meehi, the patron of all that is new, interesting, or beneficial in agriculture. It will be seen by advertisement that, with a most creditable single-mindedness, Mr. Harradine has resolved to throw open the benefits of his discovery to his brother agriculturists; and when the trouble and expense Mr. Harradine has been at in the propagation of such a quantity of seed as would warrant him in offering such a boon without the chance of disappointment to the applicant, coupled too with the fact that up to the beginning of this harvest not a single kernel has been sold for seed, be considered, the price must be taken to be a very low one.—*Cambridge (Eng.) Chron.*

Remarks.—If the foregoing account can be depended upon, it is a most extraordinary production, and from the assertion that it may be sown in February, we should think that it must be an early variety to ripen in that climate before the late rains. If it would withstand the severity of our winters, which very few of the best English kinds do, it would be well worth the attention of our wheat growers.

We should like to hear from some of our subscribers who have sown the Mediterranean wheat, of their experience as to its productiveness, and whether it escapes the wheat midge or weevil.—Eds.

In Germany, it is the common opinion, that *ten sheep* consume as much food as *one* cow.

Agricultural Miscellany.

POOR LAND MADE PROFITABLE.

The editor of the *Boston Cultivator* has recently visited the farm of Mr. Ephraim Brown, of Marblehead, and says "not a little surprised at the large yield of various kinds of crops which he obtains from land which a few years ago was ruled at a low price, and only used as a common for cow pasturage. The tract is called Marblehead Neck. It is almost an Island, forming the eastern shore of the harbor, but joined to the main land by a low beach. It contains 240 acres. The soil is what he called hard—the solid rock which forms the basis, crops out in many places, and the debris of this and granite boulders are scattered over the surface. Naturally the aspect of the place is rough and forbidding."—About 65 acres of this is purchased and brought under the plow, exclusive of 40 acres which is leased. "Of the sixty acres about forty are annually in grass, and the remainder in vegetables and grain." This year he cut about 100 tons of English meadow hay, which is rather less than the average, owing to dry weather. *The entire sales for the present year will overrun seven thousand dollars.*—The following may be taken as a summary of some of the products:

Four acres rabbinges—4,000 heads to the acre. They were of the large drum-head kind, some of the heads weighing from thirty to forty pounds each.

Four acres onions—all gathered—aggregate yield 2,400 bushels.

Four acres purple-top Swedish turnips, average 900 bushels to the acre.

Two acres carrots, 20 tons to the acre, or at 55 pounds to the bushel, the legal standard, 730 bushels to the acre.

Five acres winter squashes—four of the marrow variety, 6½ tons to the acre—one of a cross variety between the marrow and India, 13½ tons to the acre.

It is no more than fair to mention that Mr. Brown's facilities for obtaining manure are somewhat extraordinary. Kelp, with other sea plants, is washed upon his beach in great quantities. Not less than 200 cords of this kind of manure can be collected annually. It is equal to the richest stable or yard manure, as is proved from its effects on the land for many years. Mr. Brown keeps seventeen cows, (sells milk,) four oxen, and four horses. The manure from these is carefully saved.—Sea-weed is hauled into the cellar and yards which absorbs the urine and other liquids.

Boston is the market place for nearly everything Mr. Brown sells, and the articles are carried by his own teams—the distance sixteen miles.

Will the *Cultivator* inform us how the seventeen cows are kept in summer? Are they allowed to pasture on the unimproved land; and does the $7,000 include the gross receipts from the 200 acres of land, or only from the 65 acres under cultivation?

The Chemistry of Common Life. By James F. W. Johnston. New York: D. Appleton & Co. 1854.

This is one of the most interesting books, in the whole range of chemical literature, we have ever met with. It is written in a clear, lucid, and almost familiar style, free from all technicalities, and abounding in practical illustrations of the workings of chemical laws in common life; while the reputation and erudition of the author are sufficient guarantees to its general correctness. It is a book which every young man, and we had almost said every *young lady* should read,—for it treats, among other things, of the bread we eat, the beef we cook, the water, tea, and coffee we drink, and other matters interesting to all good housewives. It is a book highly calculated to create a taste for chemical studies, and should be in every farmer's library.

Sowing Clover in the Fall.—Clover, says Thaer, may be sown from the beginning of spring (or even in winter provided that it do not germinate) till the beginning of August.—*If it be sown later and come up before the end of autumn, it is commonly destroyed by the winter.* * * * The surest clover sowings are those which are executed very early in the season, or else among the autumn grain, or even ground not exposed to be flooded, and, even while the land is covered with snow, (the roelling of which carries the seed down into the ground) or among large barley sown very early, for the clover is then benefitted by the humidity of the winter.

Couch Grass.—This is one of the worst pests on a farm, as all our readers know who have had any experience with it. Mr. Wm. Shuler, of Montgomery county, informs us that he had a field entirely overrun with it. Late in the fall, he plowed the land to the depth of eight or nine inches, being careful to turn the furrows over completely, so as to thoroughly bury all the roots. In preparing it for a crop in the spring, the land was plowed only about four inches deep, so as not to disturb the roots of the couch grass. The result was its almost entire destruction.—*Country Gent.*

Wheat Crop of Minnesota.—The wheat crop of the Territory for the present season is estimated by an intelligent farmer friend, at the value of two hundred thousand dollars.

CUTTING WOOD FOR PUSH.

In an excellent article entitled "Hints for the Season," the *Boston Cultivator* urges farmers to cut wood early in the winter, and close to the ground. In a new country where wood is of little or no value there may be some advantages when clearing land, in cutting the trees a yard or so from the ground, but now when many even fear that in a few years we shall not have wood enough for fencing and building purposes, how uselessly wasteful it appears to continue such a practice especially in permanent wood lots. Read what the *Cultivator* says:

"Wood must be provided for fuel. Every economical manager has a supply, seasoned, on hand, but he must provide for the future.—The fore part of the winter, before snow falls, or before it gets deep, is best for cutting wood. While the ground is bare, there is no objection to laying the axe close to the root of the tree. By this means all the tree is saved. That part nearest the ground is the most solid and valuable, either for timber or fuel. When trees are cut high this is lost. Besides, the sprouts from low stumps are better than from high ones, and where it is wished to have the growth reproduced, this is of much consequence. Where trees are cut near the ground the sprouts soon get roots for themselves and grow rapidly; where they are cut high, the sprouts come out more or less on the side of the stump, and are liable to be broken off by the winds, and from various other causes do not succeed so well. Of course this argument is not applicable to sorts as do not sprout.

Another advantage in wood-chopping when there is no snow, is that all the small branches may be readily gathered and either made into faggots or burned on the ground, leaving the surface free from any obstruction to the new growth. We say nothing of the greater comfort to men in handling wood without snow, as that is obvious. It may be an advantage to have snow to haul wood; but if it is cut and piled, the first "sledding" can be used for that purpose.

Experience has proved that on permanent wood-lands, it is advisable to cut the whole growth off clean at once, as you would cut off a crop of grass from a permanent meadow.—The succeeding crop thus starts at the same time, and goes forward evenly, stands thickly on the ground, and every part is ready to cut again at the same time. The oftener hard wood is cut the faster the next crop will grow. It is the opinion of close observers that it is most profitable to cut the same ground over about once in twenty to twenty-five years.

KITCHEN DRAINS.

A blind drain laid after the usual style of stone or tile drains, 2 ft. deep, does not emit the offensive odor of the open gutter. It does not form a harbor for flies, &c., which are driven into the house at the approach of a summer shower or the coming on of cool nights. It may be extended close to your kitchen door, or made to connect with your sink, thereby saving labor in carrying heavy tubs or pails of waste water, the usual wearying distance from the door. The blind drain may be continued to your compost heap, by which means all the valuable wash, which is too frequently lost, may be turned to good account, and made to pay annually more than the interest, and sometimes more than the entire expenses of the work. The open sink gutter is one of the greatest nuisances around a farm house, while the covered drain, with a barrel at the upper end, having only the lower head in, and that perforated with holes 3 in. in diameter, is a cheap and durable substitute and wholly unobjectionable. Such, at least, is the experience of one who has tried it.—*Country Gent.*

Use of Guano.—I have made use of Guano for many years, and in various ways. I put it in the hill for corn, but it did not fully answer my expectation, therefore, I thought I would try a new mode. In the spring of the year 1853, I took 400 pounds of Peruvian Guano and spread it broadcast on a piece of river meadow land, that has been cropped every year for probably, more than 50 years, and plowed it in as deep as I should yard manure, and the result was wonderful; it paid me at least 100 per cent. on the cost of the Guano. There was no other manure whatever put on the lot. I next took an old pasture lot as poor as poverty, and in the last of July I spread on about 225 lbs. to the acre and plowed it under, and in the first part of September I sowed my rye and harrowed it in and the result was, 60 shocks of rye, from 3 acres, which will probably yield as many bushels. For oats, I use about 250 lbs. to the acre and for manuring land about the same, sowed on after the grass has well started. For turnips, I use 3 lbs. to the square rod, harrowing it in; for buckwheat, from 80 to 100 lbs. per acre.—G. W. M. in *Boston Cultivator.*

Mediterranean Wheat.—A Duchess Co. N. Y. correspondent of the *Country Gentleman*, speaking of Mediterranean Wheat, says: I have known it to ripen more than a week earlier than the red Bald (so called among us) or the Canada flint, and think it less liable to the ravages of the weevil. I am aware that it does not yield as greatly as some other varieties, when we are fortunate enough to have them do well, but as a general thing I think it by far the safest for a crop. Three-fourths, if not nine-tenths of the wheat raised in this county is the Mediterranean variety. I have the testimony of our millers as well as my own experience to sustain me in saying that this wheat sown on early soil, if cut before fully ripe, will amply repay the farmer with a quality of flour not surpassed in flavor by any in market, and will compare favorably with the best white varieties. I am confident this wheat yields a greater quantity and better quality of flour than it did ten years ago, in this section at least.

Inquiries and Answers.

RAIN-WATER CISTERNS.

We have received several answers to the inquiry of a "Reader" in the Rural of Nov. 11th, as to the best mode of building rain-water cisterns, and give the following extracts from a few of them:

A subscriber wishes to know if plastering on the earth with water lime cement will be durable. I would just say to him I have tried both ways and the only safe way is to build a wall say 8 or 9 inches thick with cobble stones, water lime and sand;—for the wall about four parts sand to one of lime—the water not to be let in till the wall is dry and hard.—L. Smith, *Aurelius, Cay. Co., N. Y.*

A reader inquires the best method of building rain water cisterns. Some two years since I built a cistern by simply digging a round hole in a dry compact soil, say 6 ft. on top, 3 at the bottom, and 5½ deep, plastering against the earth with water lime, giving it two coats of mortar. The first, three parts sand to one of lime, the second one part sand to one of lime. I then sprinkled on as much dry lime as would adhere to the plaster, rubbing it thoroughly with the trowel, and then serving it again in the same way. I used but one barrel of water lime. The same should be clean and coarse. Water should not be let in till it is well dried, say two weeks. It should be well covered to protect it from the frost. In this way a cistern can be made that will, in my opinion, last for years. The cost of the cistern was less than six dollars.—D. P. Brooks, *Fillmore, N. Y., Nov., 1854.*

Set a stake in the centre of the spot for the cistern, and attach a string to it long enough to mark a circle of eleven feet diameter. Excavate within this circle to the depth of two feet; then strike another circle of eight feet in diameter within the first, and excavate within this second circle to the depth of 7½ or 8 feet, sloping the sides gradually so as to leave the bottom four feet in diameter. Take one peck of hydraulic cement, and two pecks of sand as free from dirt as can be got, and mix just hard enough to spread with a plastering trowel, and proceed to plaster on the earth at the side and bottom till covered. Mix batches of mortar as directed for the first, as fast as wanted to put on (as it will soon set, if not spread, and become useless.) When the first coat is covered over and set hard enough to bear it, which will be in a few hours in dry weather, proceed to put on the second coat, and smooth it over, being very careful to cover it, leaving no breaches or cracks, and by the time it is smoothed over the top should be covered, or the dry air will be liable to crack it. For covering I used chestnut sticks that would square about 6 inches; set them close, and plaster the top to keep the dirt from getting through them, resting the sticks on the shoulders of the excavation. Let it stand until the cement appears nearly dry, and then take a pail of water, put cement or water lime enough in the water to make it the thickness of whitewash, and with a whitewash brush wash the inside of the cisterns over thoroughly. Cover the top timbers 18 inches deep with earth, and you have a cistern that will be more durable, I think, than stone or brick walls will make.—Thos. Arnold, *Stamford, N. Y., Nov., 1854.*

Guano for Potatoes.—I observe an article in the last Rural recommending guano for potatoes. I should like some information as to the mode of applying it, &c.—Wm. Wible, *Gettysburg, Adams Co., Pa.*

The common method of applying guano on potatoes in England, is to sow it broadcast on the land before planting, and plow it in.—We prefer, however, to scatter the guano in the row where the potatoes are to be planted, and cover it with an inch or so of soil to prevent the guano from injuring the sett, which it would do if in *immediate contact.* If you plant potatoes in hills, scatter the guano directly under each hill, cover it with soil, and on that plant the sett. This has been shown by direct experiment to be better than sowing the guano broadcast.

Correction.—In the Rural of Nov. 25th, in the description of a wooden cistern, it should read—"The tub was then pressed down on this mortar, and the mortar stamped or pounded down on the *outside* of the tub," &c., instead of the *inside*, as it now reads.—S. Pierson, *Le Roy, N. Y., Nov. 27th, 1854.*

Peat as a Manure.—The *Country Gentleman* says:—Generally, the soil is not much benefitted, immediately, by the application of peat only—in a few instances, we have observed it very considerably so. It is, however, a manure that remains several years in the soil, which should be taken into account.

Manure is the capital on which farmers do business; and the man who teaches them how to obtain it at a reasonable rate, and in sufficient quantities, does the public better service than if he lectured the livelong day on copper and silver mines, and amused the sleepy hours with golden dreams.

Orchard and Garden.

THE VICTORIA REGIA.

The fame of the Victoria Regia, under the generous culture of Mr. J. F. Allen, of Salem, has been widely published in the elegant volume of plates illustrating the several stages of this rare exotic. Transported from the bosom of the Amazon, this magnificent lily now blooms in the reservoir of the lily-house, in Salem, in all the perfection of its native clime. Its wide-rimmed salver-like leaves, varying from five to six feet in diameter, are only in just proportion with the flower when it unfolds in all its fullness of white, purple, and gold.—The habits of this plant require a summer atmosphere, and flowing water at a temperature of seventy degrees. It flowers every eighth day throughout the year; each flower retaining its perfect bloom for about twenty-four hours. The leaves continue to expand for thirty days, then gradually decay. Following the seasons also, they increase in average size from January till June, and decrease from June till January. The texture and strength of the leaf—the largest being capable of supporting 160 lbs.—the peculiarity of its form, the richness of its color, and the curious processes of its growth, make it even more wonderful than the flower upon whose royal beauty it continually waits. Viewed in all points, the *Victoria Regia* must be confessed the queen of flowers. Mr. Allen has been quite as successful in developing its beauties, as has Sir Joseph Paxton in the splendid gardens of Chatsworth.—*Independent.*

THE "PHILADELPHIA" PEAR.

We have heard, for some months, of a new seedling pear, that was in existence in Roxborough, 21st ward of Philadelphia, that was represented to possess high qualities; and we now see by a communication in *The Horticulturist*, from William D. Brinckle, Esq., M. D., an account of its history, and a description of its character. He says he first met with it in September last, on the premises of Mr. Francis H. Latch, of Roxborough—that it originated in Frankford, 1832, and when only a foot high, it was removed to the premises of Mr. L.;—that it is a variety of the greatest excellence; and that "its size, taken in connection with its other fine qualities, will render it one of our greatest pomological acquisitions; and at no distant day it will occupy a high position among the most valuable varieties of this excellent fruit." It was named by the Native Committee of the American Pomological Society. He adds, "with skillful cultivation, the 'Philadelphia' will probably equal, if not exceed in size, as it surpasses it in flavor, the largest grown specimens of the Duchess d'Angouleme." The original is healthy and vigorous, and a prolific bearer.—*Gen. Tel.*

APPLE TREES FROM SEED.

Mr. G. W. Peters, an old settler in Washtenaw county, in the town of Scio, informs us that in 1827 he procured from Detroit a bushel of very good, large, red, fall apples. The seed of these apples he planted, and grew from them several hundred trees, from one to two hundred of which he set in an orchard for himself. In five or six years from the seed they began to bear, and the fruit of no two trees are alike. With three or four exceptions he says the fruit was good. Some trees bear white, some green, yellow, red, striped, some of different shades, and russets; a part are fall apples, while others are medium, and others very late keepers; and what is more singular, some are quite acid, others sub-acid, and some sweet. We visited the orchard a few days ago, and examined a large number of the varieties, and found them very much resembling the following well-known kinds: Spitzenberg, Golden Russets, Newton Pippins, Swaar, Baldwin's Fall Pippins, Wine Apple, and Rambo.

The above shows very conclusively that there is no probability that apple seeds will produce the same fruit, unless under very peculiar circumstances. Of all the trees in Mr. Peters' orchard, one only produced fruit nearly like the original.—*Michigan Farmer.*

Atmospheric Pressure.—A French paper furnishes the following horticultural item:—A horticulturist of the suburbs of Versailles, in studying the physiology of the vegetable kingdom, conceived the idea that the smallness of certain plants, the violet, for example, was owing to atmospheric pressure too great for their delicate organs. Having fixed this thought in his mind, the florist conceived the idea of putting his theory into practice. Providing himself with a small balloon, rendered sufficiently tight to prevent the escape of any gas, he launched it into the air, having attached to it a silken cord 1,200 metres long. Instead of a car, the balloon sustained a flower pot of Parma violets. This experiment has been going on about two months, with the most wonderful results, in the shape of violets as large as damask roses. It is to be hoped that the above experiment may be turned to some account." This is curious if true.

Burnt clay is now extensively used, in some sections of the country, as a manure for garden soil. It is generally prepared, I believe, by first accumulating a *quantum sufficit* of woody matter, and covering it with clay. The mass is then ignited, and burnt till the wood is reduced to coal and ashes, similar to the manner pursued in coal burning. The charcoal, ashes and clay thus furnished, constitutes an excellent dressing, and produces highly beneficial effects on both crop and soil.—*N. E. Farmer.*

Manure may be now applied to trees better than at any other season of the year, as it will become well soaked into the ground by the commencement of growing.

PREPARATION OF SOIL — TRANSPLANTING FRUIT TREES, ETC.

It is a well-known fact that the deeper and more thoroughly a soil is pulverized, the better it is for the growth of fruit-trees. It has, doubtless, been observed that where the soil is shallow, the growth of the tree is slow, and, in dry summers, scarcely at all, while that of another standing in deep soil but a few feet distant, is very rapid. What makes this difference? The soil may be no more fertile in the one case than in the other; it may, even in the latter instance, be less fertile. The truth is simply this: in the one case, all the elements are made available, while in the other they are not. It is impossible for the roots to penetrate the hard subsoil, and in these circumstances, we may no more expect a rapid growth, than a rank corn-field on two inch soil.

A thoroughly pulverized soil is just as necessary for fruit trees as for grain; and yet how few carry it out in practice. One good example will effect more than volumes, written on the subject. A tree properly planted may be made to grow fifteen or twenty feet high in six or eight years, with tops as many feet in diameter, besides yielding a fair crop of fruit; and who would not rather pay eight or ten cents for the trouble, than only two cents and wait twice as long before any fruit could be expected. And yet the latter is too common among farmers. They acknowledge the error, but assign as a reason, that "it is too much work to prepare the soil two feet deep, for every tree." But planting an orchard, it should be remembered, is not a thing of yearly occurrence, and seldom takes place but once in a life time. And this consideration alone, should incite us to do it in the best possible manner. We can not cheat fruit trees, or even slight them, and expect a suitable reward. On the contrary, the reward is usually in proportion to the labor, which, be it little or much, is sure to display itself in one way or another. Deep and thorough preparation of the soil is, therefore, the first step in the cultivation of fruit-trees; and as such an operation requires much hard labor, I propose to show the method which I have employed this fall, in planting about two hundred pear trees.

For two years the soil has been plowed a foot in depth, well manured, and planted with corn. This fall I staked out the ground for the rows, and plowed the land with a Michigan soil plow, about ten feet wide, and 16 inches deep, *actual measurement*. This was done by going twice or thrice in a furrow.—When one furrow was completed, I hitched on the subsoil plow and broke up the substratum at least ten inches deeper. A land being thus finished, the dirt was scraped out right and left from the place where the tree was to stand to the depth of sixteen or eighteen inches.—This left a spot about eight feet in diameter, from which the earth was removed down to the unbroken soil, taking care to leave the dirt as near the holes as possible, so as to facilitate the labor of filling them again. Having finished a row of holes, I stir up the subsoil with a spade and pick, ten inches deeper, breaking all the lumps to pieces, and then throw in and mix together about three inches of the surface. I then hitch on the team, and by means of a back furrow, fill the hole about half full of dirt, on which is placed four or five bushels of well prepared compost, from the same yard. The manure is then covered over with dirt, and the tree set on about even with the surface, as the soil prepared in this way will settle, and bring the trees to the proper depth. Finally the best soil is placed about the roots, and a pile of dirt packed about the trees so as to keep them erect during the winter. In the spring I shall remove this dirt, and work in a good top-dressing of compost about the roots.—Many of my trees, treated in this way, send out branches three and four feet long in a single season. And even the past summer, dry as it has been, some have grown two and three feet, and appeared to suffer but little from the drouth. Many of them, on the other hand, planted after the old style, have grown but a few inches, and some not at all. I have sometimes been ridiculed for being thus particular in preparing the soil; but the best defence I can make is, to show the difference between the result of the two methods.

Ten years ago I transplanted a few trees, when the soil was broken only as deep as we commonly plow; and, although the soil has been well stirred about them each year, still they have grown but little, and yielded no fruit. This fall I am retransplanting them, as they should be. Where the soil is rather barren, all the subsoil is thrown out of the hole, and a wagon load of alluvial or soils from the highway, is deposited in each hole. Ashes, bones, tan-bark, chip-manure, saw-dust, and all such materials, are well mingled with the soil about each tree. On my hard, compact land, I think as much of corn-cobs, and tan-bark, as of any other kind of manure. My ashes instead of being deposited in the ashery for a year, or sold for a few cents per bushel, are immediately scattered around the fruit trees, and they return me, in fine fruit and healthy trees, double what they come to in dollars and cents. One word more by way of obviating the objection against transplanting trees in this manner in the spring, because it interferes too much with the ordinary business of the farm.

Let the ground or holes be prepared in the fall, or even in the winter, and then it will consume but little time in the spring to put out the trees. I am preparing the holes this fall for several hundred trees; and, if the ground is not frozen, I intend to work at them during the winter. I throw out all the subsoil, to the depth of two feet, and eight feet in diameter, and let the frost and rain act upon it; and by the time the season for transplanting arrives, this dirt soil will be as fine as ashes.

Whether this will pay, is a question often asked me. Were I not assured that labor and money, thus invested, is far better than cash at twelve per cent. interest, I should abandon the operation at once.—S. Edwards Todd, in *American Agriculturist.*

FRUIT IN CELLARS.

An exchange says:—A great deal of winter fruit suffers early decay, in consequence of a deficiency of ventilation, especially during autumn, and after the fruit is deposited. Another cause of decay is the improper location of the shelves or bins, which are placed against or around the walls. By this inconvenient arrangement, the assorting of decayed specimens must be done all from one side, and the shelves must hence be very narrow, or the operator must stretch himself in a most irksome horizontal position. The circulation of the air is, at the same time, greatly impeded by the want of space next the walls. To avoid these evils, the shelves should be in the centre, with a passage all round. This allows circulation of air; and the shelves may be twice the width, with the same conveniences in assorting or picking. If suspended from the joists above, on stiff bars, rats cannot reach them. It is said that the Germans are very successful in the ventilation of their cellars, by a communication with the principal chimney, the heated air in which necessarily maintains a current, which sweeps out the noxious and stagnant gases from the vegetable and other contents.

The Kirtland Pear, which is so highly spoken of in Ohio—it being a seedling produced by Prof. Kirtland, who has done so much for Horticulture—has fruited in New York the present year, and though of much less size than in Ohio, caused probably by the excessive drouth, it is described to be quite equal in quality to the Gray Doyenne, with rather more of the peculiar Seckel flavor.

Grapes for Consumption.—The use of grapes as an article of food is much recommended in cases of consumption. They contain a large quantity of grape sugar, the kind which most nearly resembles milk sugar in its character and composition, which also is very useful for consumptives, it having a great attraction for oxygen, and, therefore, readily affording materials for respiration.

Domestic Economy.

Stale Bread, if not too far gone, may be rendered as nearly as good as new by simply putting the loaf in a closely covered tin, and exposing it for nearly an hour to a heat not exceeding boiling water.

Cabbages.—There are more ways to cook a fine cabbage than to boil it with a bacon side, and yet few seem to comprehend that there can be any loss in cooking it, even in this simple way. Two-thirds of the cooks place cabbage in cold water and start it to boiling; this extracts all the best juices, and makes the pot liquor a soup. The cabbage head, after having been washed and quartered should be dropped into boiling water, with no more salt than will just season it. Cabbage may be cooked to equal broccoli or cauliflower.—Take a firm, sweet head, cut it into shreds, lay it in salt and water for six hours. Now place it in boiling water until it becomes tender—turn the water off, and add sweet milk when thoroughly done; take it up in a colander and drain. Now season with butter and pepper, with a glass of good wine, and a little nutmeg grated over; and you will have a dish little resembling what are generally called *greens.*—*Soil of the South.*

Omelettes.—Break four eggs into a basin add half a teaspoonful of salt and a quarter ditto of pepper, beat them up well with a fork, put into the frying pan one ounce and a half of butter, lard, or oil, which put on the fire until hot; then pour in the eggs, which keep on mixing quick with a spoon until all is delicately set; then let them slip to the edge of the pan, laying hold by the handle, and raising it slantways, which will give an elongated form to the omelette; turn in the edges, let it set a moment, and turn it over on to a dish, and serve.

It ought to be a nice yellow color, done to a nicety, and as light and delicate as possible. It may be served in many ways, but some of the following are most common: Two tablespoonful of milk, and an ounce of the crumb of bread cut in thin slices, may be added.

Poached Eggs.—Put in a small pan half a pint of water, half a teaspoonful of salt, three of vinegar; when boiling, break carefully in the pan two nice eggs, simmer for four minutes or till firm, not hard; then serve them up either on toast or fried bacon, or ham, or spinach, and on any minced and seasoned vegetable.

Mixed Eggs.—Break four eggs into a frying pan, in which you have put two ounces of of butter, a little salt and pepper; set it on the fire, stir round with a wooden spoon very quickly, to prevent sticking to the pan; when all set, serve either on toast or dish. Fried bacon cut in dice, a little chopped onions, or mushrooms, may be added to the above.

Eggs and Bacon.—Cut some bacon very thin, put into a frying pan half an ounce of butter, or fat, lay the bacon in it; when fried on one side, turn over, and break one egg on each piece; when the eggs are set, put the slice under the bacon, and remove them gently into a dish. Ham may be done the same.

Eggs and Sausages.—Boil four sausages for five minutes, when half cold cut them in half lengthways, put a little butter or fat in frying pan, and put the sausages in and fry gently, break four eggs into pan, cook gently, and serve. Raw sausages will do as well, only keep them whole, and cook slowly.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office.
For the week ending Nov. 14, 1854

Edwin Allen, of South Windham, Conn., improvement in machinery for carving stone.

Levi B. Ball, Putnam, Ohio, improvement in snuff machines.

Wm. Bancroft, of Whiteford, Ohio, improvement in cultivators.

Henry Bates, New London, improvement in slide valves for the exhaust steam.

William Beebe, New York, improvement in double cylinder boilers for hot water apparatus.

Martin Bell, of Sabbath Rest, and Edward B. Isett, of Cold Spring Forge, Tyrone city, Pa., improvement in furnaces for making iron direct from the ore.

Wm. Bell, Boston, improved lamp caps.

Job Bourn, Lawn Ridge, Ill., improvement in cultivators.

Thos. M. Chapman, Oldtown, Me., improved device for adjusting mill saws.

Matthias P. Coons, Brooklyn, multigraile iron fence.

Horace J. Crandall, of East Boston, improved method of adjusting vessels upon the keel blocks of dry sectional or railway dock.

Geo. Crampton, Worcester, improvement in looms for weaving figured fabrics.

Daniel Harris, Boston, assignor to John P. Bowker, Jr., of same place, improvement in sewing machines.

Jonathan Hibbs, Tullytown, Pa., improvement in plows.

Geo. Hodgkinson, Cincinnati, improved pegging machines.

George T. Leach, Boston, improvement in the method of engaging and disengaging self-acting car brakes.

Francis Mason, New York, improvement in breech loading fire-arm.

Wm. Morris, Philadelphia, improvement in annular registers.

Joseph Miller, Olmo, N. Y., improvement in railroad car coupling.

Wm. Moore, Bellevilla, Ohio, improvement in grain winnowers.

Alpheus Myers, Longansport, for tape worm trap.

Alpheus Myers, Logansport, for tape worm operation.

C. B. Normand, Harfe, France, mode of controlling and guiding legs in saw mills, without a carriage. Patented in England the 25th Oct., 1852. Patented in France, Nov. 5th, 1852.

C. B. Normand, Harre, France, for improved method of hanging saws for mills.

C. B. Normand, Havre, France, for improved method of controlling the leg for curved and bevel sawing. Patented in France, Nov. 5th, 1852; English patent Oct. 27, 1852.

Julius A. Peas, New York, improvement in India rubber over-shoes.

Charles A. Robbins, Iowa city, improved excavator and ditching plow.

Thos. D. Stillson, Rochester, improved excavating machine.

Wm. Stoddard, Lowell, for shingle machine.

Jacob Swartz, Buffalo, improvement in grain and grass harvesters.

Benj. James Tarman, Philadelphia, improvement in machinery for stretching and drying cloth.

Orson Westgate, Ricoville, Pa., for saw gauge.

Leon Jerosson, Jersey City, improved method of constructing printing blocks.

George Bruce, New York, improvement in casting types.

George Thompson and Merrell A. Forbush, of Worcester, improvement in rollers for pattern chairs for looms.

Jonathan W. Caldwell, Rochester, improved arrangement of lever and catch for tow-lines of canal boats.

REISSUES.

Samuel Canby, Ellicott's Mills, improvement in winnowing machines. Patented Dec. 28, '52.

WEIGHTS OF VARIOUS SUBSTANCES.

The following table gives the weight of the substances named, per cubic foot:

			Lbs.	oz.
Wrought Iron, per cubic foot,			488	10½
Cast Iron,	"	"	450	9½
Steel,	"	"	489	13
Copper,	"	"	555	
Lead,	"	"	708	12
Brass,	"	"	537	12
Tin,	"	"	456	
White Pine,	"	"	29	9
Yellow do.,	"	"	33	13
White Oak,	"	"	45	3
Live do.,	"	"	70	
Salt Water, (Sea,)	"	"	64	6
Fresh do.,	"	"	62	8
Loose Earth or Sand,	"	"	96	
Common Soil,	"	"	124	
Strong do.,	"	"	127	
Clay,	"	"	130	
Clay and Stones,	"	"	160	
Cork,	"	"	15	
Tallow,	"	"	59	
Brick,	"	"	125	

17 cubic feet of Clay make a ton
23 " " " Sand " "
18 " " " Earth " "

Eighteen cubic feet of gravel or earth, before drying, make 27 cubic feet when dry. 10 cubic yards of meadow hay make a ton; when taken out of large or old stacks 8 or 9 cubic yards make a ton. 11 to 12 cubic yards of clover, when dry, make a ton.

Italian, N. Y. J. A. Peters.

Coal in Canada.—The Toronto *Colonist* states that coal has been discovered near West Bradford, C. W. It was found on sinking for a well, and is asserted to be of excellent quality—bituminous. If this be true it contradicts geological reports of that country, but will be of immense advantage to the people.—*Sci. American.*

Like the numerous reports of the discovery of coal in this State, this statement will doubtless turn out to be unfounded. There is a kind of slate which much resembles coal, and is frequently mistaken for it.

A NEW KIND OF LOCOMOTIVE.

At the late Fair of the Maryland Institute, a gold medal was awarded to a locomotive engine exhibited by Mr. John Cochrane, the constructing engineer of the Union Iron Works of Baltimore. The chief peculiarities of this engine consist in the use of a double set of cylinders and driving apparatus, together with an arrangement of the gates whereby the motion after curves is greatly facilitated. The inventor thus describes it:

"The wheels of the Binary engine may be considered as divided into two sets, viz:—Front and back drivers, each set being operated by a separate pair of cylinders, making four cylinders in all. The pair of cylinders beneath the smoke box operate the truck drivers by means of cranked axles, and the outside pair the back drivers by means of crank pins in the wheels. Each pair of cylinders with their connections and wheels form a complete system, but are not capable of independent movement, for both systems are so combined together as to secure a simultaneous action in starting, working, and stopping, and in all the various manipulations necessary to the management of the engine.—This is accomplished by combining the outer and inner cylinder of each side respectively, by means of one steam chest and valve,—which produce a perfect unity of action in both systems."

SOAP, WHITE LEAD AND OIL.

It is not so generally known as it should be that a mixture of the above named ingredients makes an excellent coating for gates and fences, and out-buildings. The addition of the soap (soft soap only is to be used,) considerably diminishes the expense of the paint, without in any degree lessening its durability, or the facility of laying it on.

I have a house, the north-west side of which was painted with this mixture nineteen years ago, and the paint is now much more brilliant than that put upon the other sides at the same time, though the latter was of the best quality of white lead and oil, and four heavy coats applied, while of the soap paint I applied but *two*. Fences painted with this mixture, as well as the roofs of buildings, for which purpose any coloring matter, or pigment, may be substituted for the lead, endure much longer, it is ascertained, than those painted with pure oil paint. The alkalescent qualities of the compound tend to indurate the fibres of the wood, and render them impervious to those atmospheric influences which are the chief cause of decay and rot. The quantity of soap to be used can be best ascertained by experiment; on this point no definite rules can be prescribed.—*N. E. Farmer.*

Sound of Bells.—The nearer bells are hung to the surface of the earth, other things being equal, the farther they can be heard.—Franklin has remarked that many years ago the inhabitants of Philadelphia had a bell imported from England. In order to judge of the sound, it was elevated on a triangle, in the great street of that city, and struck, as it happened, on a market day, when the people coming to market were surprised on hearing the sound of a bell at a greater distance from the city than they ever heard any bell before.—This circumstance excited the attention of the curious, and it was discovered that *the sound of a bell struck in the street reached nearly double the distance it did when raised in the air.* In the air, sound traveled at the rate of from 1,130 to 1,140 feet per second. In water, 4,708 per second. Sounds are distinct at twice the distance on the water that they are on land.

Improved Stump Extractor.—An improvement in machinery for extracting stumps has been invented by Edward Vaughn, of Alliance, Ohio, who has taken measures to secure a patent. The bearing of the screw employed in this stump extractor is a half sphere fitted within a concave plate; the hub of the sweep for working the extractor has a projection resting upon anti-friction balls, and the screw passing a recess, is so arranged that the friction usually attendant on operating it in ordinary stump extractors, is greatly reduced, and at the same time the screw is allowed to oscillate and conform to the line of pressure when out of a vertical line. This machine is made with a frame to be drawn on wheels to the field where the stumps are to be extracted, and is made with devices whereby the wheels can be very readily attached and detached.

Granaries for the Storing of Corn.—The Messrs. Hurt, the great millers of Cambrai, have patented a peculiar kind of granary which they have in use for the storing of their corn. In this arrangement the corn fills completely the space in which it is to be preserved, and is kept in constant motion by means of a steam engine. The grain is lifted up and stirred round by means of a helix, and from thence falls upon an apparatus which, by means of a fan, the chaff dust and other foreign substances are removed, and the insects and their larvæ destroyed. The corn is then carried back to the same inclosed space again, and the operation from time to time repeated. These granaries are considered to be adapted not only for the preservation of corn in good condition, but for that which is already damaged.—*Le Genie Industriel, France.*

Carriage Cramp.—The common cramps of wagons and carriages consist simply of strips of metal nailed to the bottom of the box or body of the vehicle, to prevent the wearing of the wooden part where the wheels come in contact with it in the act of turning. As a superior mode to this, Samuel T. Sanford, of Fall River, Mass., has made an improvement by constructing the cramps with anti-friction rollers, so arranged that when the wheel comes in contact with them in the act of turning, they obviate the great friction of the common cramp, and at the same time prevent the vehicle from being overturned.—*Sci. Am.*

Educational.

YOUR HAND I TAKE IN MINE.

BY GEORGE P. MORRIS.

Your hand I take in mine, Willie,
And fancy I've the art
To read, while gazing on your face,
What's passing in your heart;
'Tis joy on honest hand to hold,
That gem of modest worth,
By me more prized than all the gold
Of all the mines of earth, Willie,
Of all the mines of earth.

I've marked your love of right, Willie,
Your proud disdain of wrong;
I know you'd rather aid the weak
Than battle for the strong.
The golden rule—religion's stay—
With constancy pursue,
Which renders others all that they
Can ever render you, Willie,
Can ever render you.

A conscience void of guile, Willie,
A disposition kind,
A nature, gentle and sincere,
Accomplished and refined,
A mind that was not formed to bow,
An aspiration high,
And beaming on your thoughtful brow,
And in your cheerful eye, Willie,
And in your cheerful eye.

I never look at you, Willie,
But with an anxious prayer
That you will ever be to me
What now I'm sure you are.
I do not find a fault to chide,
A foible to annoy,
For you are all your father's pride,
And all your mother's joy, Willie,
And all your mother's joy.

You're all that I could hope, Willie,
And more than I deserve;
Your pressure of affection now
I feel in every nerve.
I love you—not for fashion's sake,
But for yourself alone;
And this is why your hand I take
So fondly in my own, Willie,
So fondly in my own. *(Home Journal.*

[For Moore's Rural New-Yorker.]

SCHOOL DISTRICT LIBRARIES.

EDS. RURAL:—The great interest you take in the subject of common schools, devoting in your paper every week a column or more to that subject, is the inducement for asking the publication of the following observations:

There can be no doubt but that School Libraries have been and are exerting great and marked influences on the rising generation, and are important auxiliaries in the great scheme of Free schools and general education; for there is no greater truism than that School Houses are better national defences than fortifications, and the general diffusion of knowledge, the best security of our free institutions against the propagation of religious or political errors and fanaticism.

With all the advantages accruing from the introduction of *Libraries* in school districts, there has arisen a trouble which is yearly increasing—one that is difficult to provide against, without injuring the institution and system now established. In most of the districts of any magnitude, the number of volumes vary from two to three hundred, and the libraries become so bulky and unwieldy, that no portable book-case, convenient for moving from one elected Librarian to his successor, can contain them,—and no one is willing to take the very onerous charge for more than one year in succession. If located in the school-house, subject to the teacher's supervision, no Librarian is safe, the law is so stringent, making him responsible for every infraction and loss, and being liable during vacation, to be robbed or abused; which once happened to the writer of this article.

If some project could be devised, whereby the Library could be kept in an ordinary case sufficiently portable to bear removing from house to house; and allowing a fair exposure of the books,—not being packed three or four deep, as is now the case, and being obliged to turn out a bushel or two on the floor to find a Robinson Crusoe for some little apple munching urchin, it would result in a great convenience to Librarians, and benefit to readers. To exhibit the books in many districts properly, the cases would have to be quadrupled in size.

It has been proposed, and with some show of advantage, that a law should be passed, allowing the Trustees to select and sell at public auction, at whatever price, they would bring, to the inhabitants of the district *only*, an amount not exceeding one-third of the number of books in their libraries, when exceeding one hundred volumes; selecting such as are dilapidated and injured, and such as were badly selected for the purpose intended, as is often the case. The books sold would be distributed among adults and children in families by this process, and perhaps made more generally useful, than when doled out to children on stated days.

No one on inspecting any School Library in the country, but will be struck by the great number of the books, which are as fresh and unused as when purchased; never having been read, being works entirely unadapted to the capacities of the young mind, or on subjects entirely uninteresting to any one. All such works had better be disposed of at some price, relieving the Library of useless incumbrances and, laying out the avails in new and valuable productions—start *de novo* with an improved catalogue.

The views of your readers are solicited on this subject. The idea is not new, having been a good deal agitated in private circles; but not in the public prints, as far as observed

LIBRARIAN.

EDUCATIONAL DESTITUTION IN GEORGIA.

Georgia is a magnificent State. She has a larger territory than either England, Scotland, or Ireland. She can furnish land sufficient to make five such States as Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, and have something left besides. She can muster acres enough for over two thousand nations of the size of the Republic of San Marino. By liberal legislation and appropriations she has led the run among the Southern States in the march of material progress. Education—so far as it affects her towns, and her more wealthy and densely populated country communities, has wonderfully advanced. These are matters of general congratulation; but they have stimulated our self-complacency into undue growth—into proportions so ample as to hide another fact of an opposite character.

Let the above reasons for honest pride in our noble State give us the nerve manfully to face the grim facts of a darker line, which make up a part of the current history of education in Georgia. The cry of educational destitution among our poor rings out from the census figures. Wherever copies of that census have been deposited in the libraries of England, of the continent of Europe, of the civilized world, there the record is against us that we had, in 1850, a mighty host of 41,000 entirely uneducated freemen, whose ranks are yearly swelling. They are nearly all *native born Americans*. Let us not soften the unpalatable truth, by pointing to the ignorant masses of the Old World. *They* are not freemen; *they* are not sovereigns. Nor let us try to take the edge from the sad fact by saying that many of this multitude were born in other States of the Union. Wherever they were born they are Georgia citizens *now*. True, it is too late to educate this 41,000. But can we do nothing (except what the meager poor school system is doing) towards arresting the evil in those now growing up? The history of the past and of the present show that "the poor school system," which we have so long adhered to, will not meet our wants. Is it not a humiliating fact, as stated by the first editor of this journal, that by the last census "*less than one-third of our children and youth were in school at all, while the whole number attending school of every grade were about equal to the number of adults who could not read and write.*" Since the year began we have, *in portions only*, of four counties of our State, been in near sixteen neighborhoods where there is not even an old field school. These same counties have, probably, as many more neighborhoods in the same predicament. One of these contains the Capitol. We have no reason to think that the great majority of our counties are any better off in this particular. As a collateral fact, pointing in the same direction, the report of that noble institution, the American Tract Society, for the present year, shows that her colporteurs found in less than one-third of the counties of our State some five hundred families without a Bible in the house. Where is our patriotism, our State pride, our philanthrophy? What necessity for a mighty agitation in behalf of *general* education? The public is asleep; editors are asleep; politicians, judges, legislators, are asleep. We hope that the resolution of the Teacher's Convention, at its recent session, requesting every editor in the State to write an article on the necessity for a system of general education will be promptly responded to. To the press, with its immense power, must we look to hold up before the public mind the educational destitution of from fifty to a hundred thousand young Georgians, until it passes from a forgotten fact into a public anxiety.—*Southern School Journal.*

DIRECTION OF THE YOUTHFUL MIND.—How greatly do parents and preceptors err in mistaking for mischief or wanton idleness, all the little manœuvres of young persons, which are frequently practical inquiries to confirm or refute doubts passing in their minds. When the aunt of James Watt reproved the boy for his idleness, and desired him to take a book, or to employ himself to some purpose usefully, and not to be taking off the lid of the kettle and putting it on again, and holding now a cup and now a silver spoon over the steam, how little was she aware that he was investigating a problem which was to lead to the greatest of human inventions!

NEVER TOO LATE TO LEARN.—At the recent commencement of Wittemberg college, one of the graduates who received the highest honors of his class, was forty-two years of age. Having enjoyed no opportunities for education in his youth, he commenced at the rudiments when twenty-five years old, and he soon acquired a deep thirst for knowledge, and improved all his opportunities and intervals from labor for study. As is evident, he possesses great fixedness of purpose, and is deterred or discouraged by no difficulties.

THE "ASTOR HOUSE."—John Jacob Astor made provision in his will for an institution that should perpetuate his memory in Waldorf, Germany, the place of his birth. It was recently opened, and dedicated with solemn ceremonies, and is intended to answer for an infant school, an educational institute for the young, and a retreat for aged and indigent persons.

STUDY in all things to conciliate, and cherish continually that charity and forgiving spirit which you would have exercised towards you.

THE LATE ANDREW J. DOWNING.

The portrait at the head of this article is a correct likeness of the late lamented A. J. DOWNING, who perished in the summer of 1852, at the time the Henry Clay, one of the Hudson River steamers, was destroyed by fire.—Mr. DOWNING had himself reached the shore in safety, but swam back in the hope of aiding in the rescue of other of the ill-fated passengers, and in so doing lost his own life—a life pre-eminently useful to the country and to the world.

As the editor of the *Horticulturist*, as the author of "Landscape Gardening," "Cottage Residences," "Fruits and Fruit Trees of America," and other works, as an active and practical worker in the field of rural economy and rural taste, the name of A. J. DOWNING is familiar to us all. He was born at Newburgh, N. Y., in the year 1815, and early turned his attention to those subjects which occupied his pen and labors up to the time of his death.—No man has done more to diffuse a proper taste in the building and arrangement of rural cottages, and the evidences of the influence of his publications on the minds of the American people are visible in every town and hamlet throughout the country. He superintended personally the laying out and beautifying of the grounds of many suburban villas, and had erected for himself at Newburgh a beautiful rural home. At the time of his death he was on his way to Washington, where he was engaged to superintend the laying out and adornment of the Government grounds in that city; but in an unexpected moment, in the full vigor of his intellect and the manly powers of lusty life, he was called away at the period of his greatest usefulness. But his memory and his works remain for the benefit of posterity.

The family of Mr. DOWNING were on board the steamer at the time of the catastrophe, but were conveyed by him to a place of safety on shore previous to the philanthropic effort which cost him his life.

There is at this time a cause on the calendar of the Circuit Court of Orange county, instituted by the executors of Mr. DOWNING, against the owners of the steamer, for the recovery of five thousand dollars damages on account of his death. The suit was commenced for the benefit of his family, and the result is awaited with a great deal of interest and anxiety. A money verdict would aid those whose chief dependence was upon him for support, but the loss to them and to the country at large by such a casualty as the burning of the Henry Clay, is irreparable.—DOWNING was young in years, being but thirty eight at the time of his death; but he had reached a venerable age, if good works are taken as the measure of life. A short and active career is infinitely preferable to years of imbecile and unproductive being.

"Virtue, not rolling years, the mind matures."

BUSINESS HABITS.

It is an awkward thing to begin the world without a dollar—and yet hundreds of individuals have raised large fortunes from a single shilling. I know a gentleman, a builder, in an extensive way of business, now well worth $100,000, who was a brick-layer's laborer some six years ago, at $1 per day. He became rich by acting upon principle. He has frequently assured me that even when he was in ill-paid employment, he continued to save 50 cents per day, and thus laid up $182 the first year. From this moment his fortune was made. Like the hound upon the right scent the game sooner or later won was sure to become his own. Another very extensive firm—one of which has since died and left behind him an immense property, the other is still alive, and has realized as much, and yet, both these men came to New York without a cent, and swept the very shop wherein they both afterwards made their fortunes. Like the builder whom we have just mentioned, they possessed an indomitable spirit of industry, perseverence and frugality, and the first half-crown became in consequence the foundation of a million more.

The world at large would call these individuals fortunate, and ascribe their properly to good luck; but the world would be very wrong in so do. If there was any luck at all in the matter, it was the luck of possessing clear heads and active hands, by which means multitudes of others have carved out their own fortunes, as well as those instances we have above cited. But the word "*business*" means *habit*. Paradoxical as it may seem at first sight, business is nothing in the world except habit—the soul of which is regularity.—Like the fly-wheel upon a steam engine, this last keeps the motion of life steady and unbroken, thereby enabling the machine to do its work; without this regularity, your motions as a merchant may be capital but they never will be profitable.

If you don't want to fall in love with a girl, don't commence flirting with her. This courting for fun is like boxing for fun. You put on the gloves in the most perfect good humor, with the most friendly intentions of exchanging a few amicable blows; you find yourself insensibly warmed with the enthusiasm of the conflict, until some unlucky punch in the "vesikit" decides the matter, and the whole affair ends in a downright fight.—*Lowell Jour.*

SWEET SPECULATION.

Some individual, having visions of sugar floating through his brain, has ascertained the amount of sugar consumed in this country during the last year, and indulged in several speculations thereon. The amount consumed was about 705,000,000 pounds of cane sugar, and 27,000,000 pounds of maple sugar. This gives more than 24 pounds of cane and 1 pound of maple sugar to every man, woman and child. If this sugar were put into barrels holding 200 pounds, and each barrel occupied the space of 3 square feet only, it would require 329 acres of land for it to stand upon. The barrels, if placed in a row, would reach 220 miles. If this sugar was put in paper packages of 5 pounds each, it would require 146,100,000 sheets of wrapping paper, and if only a yard of string was used to each package, there would be required 430,200,000 feet, or 32,000 miles of string. If every retail clerk sold 100 pounds of sugar each day, it would require nearly 25,000 clerks to sell it all in a year. If the profit was only two cents a pound on this sugar, these profits alone would amount to nearly $15,800,000.

"GREAT IS TRUTH, AND IT WILL PREVAIL."—Truth may be despised — may be opposed; but it contains an imperishable germ of greatness and of empire. The acorn falls upon the ground, vegetates in the soil, and presently a seedling plant appears, liable to destruction from every blast; but notwithstanding frosts and storms, its roots infix themselves more deeply in the earth, its branches extend, its head towers upward, every year adds to its magnificence, till, venerable in the growth of centuries, it stands the father of the forest.—So religious truth may be accounted contemptible; may be slow in its progress; may be often threatened with annihilation from the sophistries of error, and rage of persecutors; but, nurtured by an unseen and almighty influence, its grasp of the human intellect extends; its attributes of grandeur and beauty are unfolded; its head rises in triumph over all its rivals, and, ultimately, it appears enthroned the universally confessed monarch of the globe. —*Rev. W. Ureicck.*

SOME men are very entertaining for a first interview, but after that they are exhausted and run out; on a second meeting, we shall find them very flat and monotonous, like hand organs, we have heard all their tunes.

Sunday Reading.

[Written for the Rural New-Yorker.]

DEATH.

Come not unto me, O Death!
In the spring's young rosy hours,
When smileth earth,
In the joyous birth,
Of her children the first born flowers;
Nor yet when the spring of life,
Hath fanned with its quickning breath,
The fair young buds of hope, till they start,
Into life and bloom, in the bounding heart;
Come not to me then, O Death!

Come not when the summer sun,
Hath deepened the tender hue,
Of the lovely rose,
And the green turf glows,
'Neath a sky more intensely blue;
Nor yet in the summer of life,
When the golden light of faith;
Giveth brighter hues unto hopes still dear,
And the risiones future seems yet more near;
Come not to me then, O Death!

But come when the autumn wind
Sways sadly the old oak tree;
And its brown leaves spread,
O'er my lowly bed,
Shall be covering meet for me;
And O! when the leaves of life,
In the bleak world's chilling breath,
Are faded, and withered, and one by one
O'er the grave where hope lieth dead are strown,
Come then unto me, O Death!

And I'll greet thee with calm content,
For well could I bear to die,
In those mournful hours,
When on all the flowers,
Thy withering spell shall lie;
Nor yet would I care to live
When all that is dear to-day,
The trusting faith of the heart yet pure,
The high resolve, and the hope so sure,
Alike shall have passed away.

Adrian, Michigan, 1854. VIOLA.

WHEN WE ARE DEAD.

WHEN we are dead there will be some honest sorrow. A few will be really sad, as we are robed for the grave. Fewer, probably, than we now suppose. We are vain enough to think our departure will produce considerable sensation. But we over estimate it. Out of a small circle how soon shall we be forgotten! A single leaf of a boundless forest has fallen! That is all.

The gay will laugh
When thou art gone; the solemn brood of care
Plod on; and each one, as before, will chase
His favorite phantom.

The world will go on without us. We may have thought a very important wheel in the great machinery will be ungeared when we are gone. But the world goes clattering on as if nothing had happened. If we filled important stations in society; if we have wondered what would, or could be done, if we were removed; yet how soon others will fill our stations!—The world will be a bustling active world without us. It was so before we entered it. It will be so when we are gone.

When we are dead, affection may erect a monument. But the hand that set it up will soon be powerless as ours, and for the same cause. How soon they that weep over us will follow us! The monument itself will crumble, and it will fall on the dust that covers us. If the marble or the granite long endures, yet the eye of affection will not endure to read the graven letters. Men will give a glance at the name of one they never knew, and pass on with not the thought of the slumberer below.

On my grassy grave
The men of future time will careless tread
And read my name upon the sculptured stone;
Nor will the sound, familiar in their ears,
Recall my vanished memory.

When we are dead our influence will not be dead. We leave epitaphs upon indestructible materials. Our manner of life has been writing them. We have stirred up thought and awakened emotion. The wonderful machinery of mind has felt our presence. We have pressed the stamp of character into the warm wax of our moral sensibilities around us. Our places of business, our social resort, may know us no more; but living accountable beings feel the influence that involves our personal departure.

TALKING AND DOING.—When Dr. Chambers was executing his plan of establishing parochial schools in connection with St. John's Parish, in Glasgow, a site which belonged to the college was selected for the first school to be erected. Dr. Chambers called on Dr. Taylor, the head of the college, in order to purchase the site. He expressed his hope of obtaining it on reasonable terms, in consequence of the novelty and importance of the undertaking.

"The undertaking," said Dr. Taylor, "is an important one, but is not a new one. We have been talking for twenty years of establishing parochial schools in Glasgow." "Yes," said Dr. Chalmers, "but how many more years do you intend to talk about it? Now we are going to do the thing, and not talk about it; and so you must even let the price be as moderate as possible, seeing we are going to take the labor of talking and projecting entirely off your hands."

There is a great difference between talking and doing, though all men do not seem to be aware of it. In the case above alluded to, more was accomplished by the latter in six months than by the former in twenty years.—There are many persons who would be greatly profited by exchanging talking for doing.—*Christain Adv. and Jour.*

PROTESTANTISM IN FRANCE.—The General Pastoral Conference of France, at its late annual meeting, resolved to demand the appointment of Protestant Chaplains for the French army and fleet in the East; also the reopening of places of worship belonging to Independents, now shut by order of the authorities; also a private audience of Louis Napoleon by a deputation of pastors and laymen, to present to him a proposal in favor of religious liberty.

Miscellaneous.

TWILIGHT.

BY FITZ GREENE HALLECK.

There is an evening twilight of the heart,
When its wild passion-waves are lulled to rest,
And the eye sees life's fairy scenes depart,
As fades the day-beam in the rosy west.
'Tis with a nameless feeling of regret,
We gaze upon them as they melt away,
And fondly would we bid them linger yet,
But Hope is round us with her angel lay;
Hailing afar some happier moonlight hour;
Dear are her whispers still, though lost their earthly power.

In youth, the cheek was crimson'd with her glow,
Her smile was loveliest there; her matin-song
Was heaven's own music, and the note of woe
Was all unheard her sunny bowers among.
Life's little world of bliss was newly born;
We knew not, cared not, it was born to die.
Flushed with the cold breeze and the dews of morn,
With dancing heart we gazed on the pure sky,
And mock'd the passing clouds that dimm'd its blue,
Like our own sorrows then—as fleeting and as few.

And manhood felt her sway but—on the eye
Half realized, her earthly dreams most bright,
Her promised bower of happiness seem'd nigh,
Its days of joy, its nights of delight;
And though at times might lower the thunder-storm,
And the red lightnings threaten, still the air
Was balmy with her breath, and her loved form,
The rainbow of the heart was hovering there.
'Tis in life's noontide she is nearest seen,
Her wreath the summer flower, her robe of sunniest green.

But though less dazzling in her twilight dress
There's more of heaven's pure beam about her now;
The angel smile of tranquil loveliness,
Which the heart worships, glowing on her brow.
The smile shall brighten the dim evening star,
That points our destined home, nor o'er depart
Till the faint light of life is fled afar,
And hush'd the last deep beating of her heart:
The meteor bearer of our parting breath,
A moonbeam in the midnight-cloud of death.

THANKSGIVING.

Thanksgiving has come and gone once more the swift year has made another revolution since the previous anniversary, and the whole human family has taken one more step forward toward the end of life's swift journey. The services at church were of the usual solemn and interesting character; the clear, ringing voice of the venerable clergyman was audible in every corner of the sacred edifice, but we fancied it had acquired a deeper tone, and at times was a little more tremulous than it was last year. It might be a fancy merely, or it might be that the recollection of domestic afflictions moved him; it might be that one more year has begun the work of weighing him down. The congregation were attentive, and seemed to respond to the sentiments uttered by the speaker. Sorrows have visited many of them during the year, but the immeasurable preponderance of blessings over afflictions seemed to be very generally acknowledged.—Even those who have had the greatest cause to mourn over the events of the past year appeared to submit to the chastening hand of the Almighty, with a strong faith that

"Behind a frowning providence,
He hides a smiling face,

Returning home after the public exercises of the day, each citizen sat down to a bounteous board, spread as an exponent of the abundance showered upon us. Age, venerable with its weight of duties nearly done; manhood with the full responsibilities of life pressing upon it; youth buoyant with hope and anticipation; infancy helpless and dependant in the first buddings of life's young spring, are congregated together in some households——*in some households, but not in all!* The grandfather in many, many instances has gone to his rest during the past year. The father has now and then been called away from his place at the head of the family, the mother has hidden adieu to her helpless little ones, or the infant has closed in death the buddings of its early promise. These changes are constantly taking place around us, conveying to our minds the solemn admonition, that no age or condition is exempt from a summons from the dread messenger.

Time speeds onward with a noiseless and swift footstep, but he leaves behind him abundant traces of his passage. The old grow more infirm and tremulous, the middle aged begin to show slight indications that life with them has reached its culminating point, the youth develops his energies, both physical and mental, each illustrating humanity in one of its phases of growth, maturity, and decay.

Thanksgiving is well worthy to be kept up as a sacred anniversary established by our fathers, and it is gratifying to observe the increased attention bestowed upon it throughout all our new and rising Western communities as well as in the older states; but thanksgiving one day, will not compensate for thanklessness and ingratitude to God, for the balance of the year.

Marriage hath in it more safety than single life; it hath more care, it is more merry and more sad; is fuller of sorrow, and fuller of joys; it lies under more burdens, but is supported by all the strength of love and charity, which makes those burdens delightful. Marriage is the mother of the world, and preserves its kingdoms, fills its cities and churches, and heaven itself, and is that state of good things which God hath designed as the present constitution of the world.—*Bishop Taylor.*

[Written for Moore's Rural New-Yorker.]

USEFUL MEN.

George S. Hillard eloquently says:—"I confess that increasing years bring with them increasing respect for men who do not succeed in life, as those words are commonly used. Heaven has been said to be a place for those who have not succeeded upon earth; and it is surely true that celestial graces do not best thrive and bloom in the hot blaze of worldly prosperity. Ill-success sometimes arises from a superabundance of qualities in themselves good—from a conscience too sensitive, a taste too fastidious, a self-forgetfulness too romantic, a modesty too retiring. I will not go so far as to say, with a living poet, 'the world knows nothing of its greatest men;' but there are forms of greatness, or at least of excellence, which 'die and make no sign;' there are martyrs that miss the palm, but not the stake; heroes without the laurel, and conquerors without the triumph."

True greatness is synonymous with excellence. Though it is not necessarily true, that truly great men are unsuccessful, yet it is true that there are circumstances in the character of great and good men, that are by no means favorable to success. "Honesty is the best policy;" and yet it is often said of some, "they are too honest to be successful." "If I can succeed, (says one,) only by a course of doubtful policy, then farewell to success." "I would rather be right, (says another,) than be President."

But who are our great men? Those who do most good in the world while in it, and whose influence will continue to bless mankind long after they have disappeared from the stage of life. These are often found among those of whom the world knows little till after they have "rested from their labors." "They die and make no sign," but a grateful posterity suffers not "their memory to perish."

I once heard a father say to his son, "you are too honest for this world." Yet that father was truly an honest man; for he would conscientiously do to others what he was willing that they should *require* of him. Not so with the son;—he observed the former part of the rule, but not the latter: he would do or give *more* than he required. Here was the difference; and to this difference must be added, that the father's experience of the world had opened his eyes to its deceptiveness, and weakened his confidence, while the son, from his inexperienced had not learned to suspect any, and his innate, honest simplicity led him to trust all. The father had learned to be on his guard, the son had not. The son *was* an unsuccessful, though a useful, man; and if not what the world calls great, he was by no means destitute of "some of the forms of greatness, or, at least, of excellence."

The wise and good are always great, though not always useful. H.

Oak West, Nov., 1854.

THE BLIND GIRL.

The following account is given by the Rev. L. Foote, of Delavan, Wis, and may be found in the October number of the Home Missionary:

We have been called to follow to the grave one of our number who has been acting Deacon in our church for some years. His death was peaceful. We had already buried his wife, who was also a decided Christian and a member of our church. Among a numerous family of children, they had one young daughter who was blind, and who had for a time past been attending the blind asylum at Janesville. She was greatly attached to her father, and he to her. He died quite suddenly, while she was away. She was sent for, but did not arrive until the people were assembled at his funeral. The scene was most affecting. The services were being commenced; she was led into the family group, and seated near the coffin; and now, in order to satisfy herself of the fearful reality of what she had *heard*, but could not see, we presently saw her tiny arm extended as if to find some token that she was now verily a blind orphan! And when her sensitive fingers touched the coffin, she bowed her head in silent grief. It was with difficulty, for the moment, that I could proceed in my discourse. But the most affecting part was yet to come! The services being ended, the lid was opened, and when friends and neighbors had taken their last look at this good man, then the family group gathered around his remains, and she among the number. They looked and wept. Presently I saw her feeling her way along up to the head of the coffin, until her hand rested upon the opened lid. She stood a moment as if to gather strength, and then with her other hand she withdrew her glove, and her little fingers were placed over against the cold forehead. They went from that to his ear, his cheek, his eyes, his mouth, his nose, his chin, his neck, and his hair, as she had been wont to do in other days, until she had formed on her mind an image of the physiognomy of him whom unseen she had loved. But the voice was not there; and she stood and sighed as if all the world was lost to her. It was too much! I had to turn away and weep!

Guilt, though it may attain temporal splendor, can never attain real happiness. The evil consequences of our crimes long survive their commission, and, like the ghosts of the murdered, forever haunt the steps of the malefactor.

Ladies' Department.

CONDUCTED BY A——E.

ADDRESSED TO MY WIFE,

On the Ninth Anniversary of our Marriage.

BY REV. J. H. PORMAN.

'Tis just nine years ago, dear Bess,
When in the morning of our life,
We took our vows of faithful love,
And you became my trusting wife.
'Twas on a fair and dewy morn,
With earnest faith, and hand in hand,
Our life-long journey we commenced,
Hoping to reach the heavenly land.

A rough and thorny way it is
We've journeyed these fleeting years,
Yet flowers have bloomed along our path,
And faith has banished all our fears;
And in life's trials we have been
Each other's confidence and stay,
And love has lightened every step,
And cheered us on our destined way.

Rich mercies have our Father sent,
To crown and bless our earthly lot,
And many tokens of His love,
That ne'er by us shall be forgot;
And not the least of these, dear Bess,
Are all our precious cherubs, four,
The innocent and happy group
That play around our cottage door.

How oft—returning from the world,
To find our home, our blest retreat—
Their merry voices greet my ear,
And tramping sounds of little feet!
The baby lifts his tiny hands,
And clambers up his father's knee,
And the glad shout that "papa's come,"
Fills the whole house with noise and glee!

Your friendly hand is clasped in mine,
Your kiss of welcome makes me blest,
And in the radiance of your smile
I find my happiness, my rest.
Oh, joyous hours! when I can sit
With you, my gentle wife, apart,
And feel your deep, confiding love,
Twining its tendrils round my heart.

How oft, beneath the spreading elm
That casts its shade around our door,
We've sat upon a summer's eve,
And viewed the smiling landscape o'er,
And from the setting sun have seen
A golden light spread o'er the west,
That imaged to the eye of faith
The region of eternal rest!

When we have reached that heavenly land,
Where all our best affections tend,
Our dream of life will then be past,
Our toilsome journey at its end;
There we shall rise to endless youth,
There faith itself be lost in sight,
And guardian angels lead us through
The realms of glory and of light.

Father! whose gracious providence
And tender care are over all,
Preserve us from temptation's power
Nor let us into danger fall;
Help us to keep the holy charge
Which in Thy mercy Thou hast given,
And lead us in the perfect way
That brings us all to Thee in Heaven.

"*Rose of Sharon*" *for* 1855.

Trans-Atlantic Epistles,

TO COUSIN KATEY.

Communicated thro' Moore's Rural New-Yorker.

EPISTLE FIFTEENTH.

Pompeii—House of Sallust—The Romans, lovers of the open air—Excursion to Misenum—Cemeteries of Naples—Lazzaroni—Character of the Neapolitans and of their Government.

Dear Cousin Katey:—Vesuvius was not the only locality about Naples which attracted our pilgrim steps. We also visited Pompeii, passed through its streets, where the ruts worn in the pavement, and the stepping-stones crossing from one side to the other at frequent intervals, almost make one fancy that the tide of travel and business has but just deserted the old city, and may be expected at any moment to flow back into its accustomed channel. We entered its temples and other public edifices, seated ourselves in its noble amphitheatre, where the gladiator was "butchered to make a Roman holiday," and examined with even greater interest its private residences, which, though stripped of their ornaments, half crushed by the load of ashes which so long rested upon them, and now crumbling away from exposure to the elements, still tell the story of the domestic life and habits of the ancients, with a vividness and power which the written page does not possess. The general arrangement of the city is absolutely identical with that of its modern neighbors. Double walls, with towers rising at intervals, strong gates and a sentry box in which an armed skeleton was found, inns without the walls and within, suburban villas and city mansions, custom house, markets and shops of every description, temples, baths, two theatres and an amphitheatre, all the paraphernalia which minister to the factitious wants created by civilization, are here to be seen; and proof is not wanting that the vices which follow in their train, had here reached their fullest and most revolting development.

But our business, Katey, is not with these general features of the city. Let us together enter one of the private houses, and see what we can learn of the inner, home-life of these famous Romans. We will take the house of *Sallust*, one of the largest and most elegant in the *Via Domitiana*, the Broadway of Pompeii. You observe there are no windows looking into the street; these are very seldom found here. The entrance hall in which the porter lived, is small and unpretending. From this we pass into a vestibule, and then into the *Atrium*, or open court, where the master of the house received his friends and transacted business. A cistern for rain water is often found in this court. Further on, at the right, we enter the more private part of the house, composed of another open court, surrounded by a portico, with which communicate the apartments of the women, the sleeping rooms, the *Triclinium*, or dining saloon, the domestic chapel with its household gods, and sometimes a picture gallery, library, baths, &c. This court, as you observe, is decorated with fresco paintings, tolerably well preserved. Acteon changed into a stag and devoured by his own dogs, Mars, Venus, &c. Here was found a beautiful group in bronze, Hercules and the stag, now in Palermo. Not far from the house the skeleton of a woman, perhaps the mistress of the mansion, was discovered, with jewels, money, a silver mirror, &c., and near by several skeletons of slaves. Connected with the establishment is a shop, from which it has been inferred that even the wealthy patricians of these ancient times did not disdain themselves to sell the products of their estates.

Does not the whole arrangement of this house, Katey, tell a story of life passed in the open air, not pent up in close, artificially heated rooms? These two courts, one appropriated especially to the master, the other to the mistress of the mansion, were the places in which visitors were received, in which business was attended to, in which the day was, in fact, spent. But, connected with this freedom, the gift of a genial southern sky, is an absence of many of those comforts which we, daughters of the inclement North, regard as quite essential. Just notice these sleeping apartments, small, narrow cells, with no provision for light and air, but the one door which opens into the portico. After all, Katey, we will not envy these Roman dames their advantages. If we have not their sunny sky and balmy air, neither are we awakened by the roar of the terrible volcano, If our husbands, sons and brothers are not masters of the world, we at least, their *better* halves, are possessed of more independence, and treated with a greater consideration than the haughtiest of these ancient matrons.

Another delightful excursion which we made while in Naples, was around the gulf of Baia to the Cape of Miseonm. In this enchanted region the wealthy Romans, in the times of the Cæsars, located their summer villas, and the amount of reminiscences, historical and classic, here accumulated, is perfectly overwhelming. What think you, quiet, domestic cousin Katey, of seeing in one day the villas, (or what remains of them, which it must be confessed does not always amount to very much,) of Cæsar, Pompey, Marius, Sylla, Nero, Lucullus, Cicero, &c., the tomb of Agrippina, the Sybil's cave—a dismal hole in the rock, half filled with water, into which you are carried on the back of a swarthy Italian—the Lake of Avernus, as harmless and beautiful a little sheet of water as I ever beheld, notwithstanding the dark colors with which Virgil has painted it—the Elysian fields, almost innumerable temples to Roman deities, and last, but not least, the tomb of Virgil himself? I begin to think there is nothing like traveling, and who knows but I shall come out with a book some day, in which all these great names will figure largely. In that case, I promise you the first reading of it, and till then we will let the illustrious Romans rest in peace.

The two *Campo Santos*, or cemeteries of Naples, interested us much, as they differ in some respects from any which we have seen elsewhere. The old one is at present appropriated exclusively to the very poor, those whose friends are not able or willing to pay even the smallest pittance for their burial. It contains 366 large pits, one of which is opened every day, and all the dead accumulated in the course of twenty-four hours are buried into it in one indiscriminate mass, often in a state of nudity. It has even been said that quick lime is added to hasten the process of decomposition, but for the truth of this assertion I cannot vouch. The pit is then closed for a year, and the next one in turn taken for the succeeding day. In this cemetery is also the large pit in which the victims of cholera of all ranks and conditions found one common grave when Naples was so terribly ravaged by this disease some years ago. The new *Campo Santo* is a beautiful spot, emphatically a "city of the dead," for, surrounding its entire circuit and interspersed throughout its grounds, are chapels for the dead, often of considerable size and architectural pretensions. These belong to the different congregations of the city, or to the families of the nobility, and in them the bones of the wealthy and distinguished dead repose. A singular custom prevails here of placing the body in the ground until it is decomposed, which process is accomplished, we were told, in fourteen months, then taking up the bones, enclosing them in a coffin, and depositing them in a niche in the side of one of these chapels. Connected with this cemetery is a large court-yard containing some thirty pits, in which those persons are buried for whom a small sum is paid. Each pit remains open for several days, and the average number deposited in it is five or six. A short funeral service is said by one of the monks who form part of this establishment, but there is something very revolting to the feelings in the idea of dead bodies being thus thrown together in a pit, with no mourning friends to accompany them to the place of burial, or care for the last, sad offices which affection can render to the departed. Tupper, in his *Proverbial Philosophy*, alludes very effectively to this heartless treatment of the dead in the brilliant city of Naples.

On our return from visiting the cemeteries we met hosts of carts, literally running over with the gay Neapolitans. From ten to fourteen men, women and children are no uncommon number to be seen perched upon one cart and drawn by one horse, the latter going, too, at full speed.

Another characteristic feature of Naples is its *Lazzaroni*, who form no inconsiderable proportion of its population, and are the most perfect embodiments of the "Dolce far Niente" that it is possible to conceive. Almost naked, or clad in the most miserable rags, living from hand to mouth, they spend most of their hours basking in the warm rays of the sun, *vegetating*, as it were, and prefer this mode of existence to any less independent or more laborious one. We sometimes saw crowds of them at night waiting in the open air around an immense kettle of *maccaroni*, for their portion to be distributed to them. This, the national dish of the Italian, costs but the merest trifle, and with it they are perfectly content.

The Neapolitans are, in general, a lively, pleasure-loving people, with less dignity and marked character than the Romans, but possessing more frankness and sociability, and adapting themselves more easily to circumstances. They are not particularly friendly to their present government, as a mere casual glance at their city will show. The police office is well garnished with cannon, their mouths all opening threateningly upon the public square which lies by its side, and commanding several streets. They are evidently designed, not to protect against a foreign foe, but to hurl the murderous lead into the midst of a turbulent populace. The King possesses a Swiss guard, and has already been more than once indebted for his personal safety to their fidelity. As I beheld these evidences of tyranny on the one hand, and of smothered discontent on the other, my thoughts could not but revert to happy, free America, and I felt in my inmost soul that I would not exchange the noble institutions of my fatherland for all the delights of Naples, for its lovely bay, its enchanting scenery, or the treasures of art which its galleries can boast,—with which very patriotic sentiment I will bring my letter to a close. Minnie.

RETURN OF OLD FASHIONS.

All who have watched the history of fashion in dress, must have observed that certain fashions, long exploded, are coming into vogue again. We have already noticed the gradual return, in Europe, to the full skirts and hooped petticoats of a former generation—and we now see, amongst ourselves, the revival of a fashion amongst our young ladies, which have been in disuse ever since their mothers were young ladies. We allude to the broad, stiff, silk ribbon belts or bands which when we were boys, bound every lovely waist, but which have long since been discarded for polka waists and other bewitching inventions, to conceal and yet define the female form divine. One of our largest establishments informed us yesterday, that a lot of these splendid belt ribbons, which had been laid aside and forgotten for many years, had just come to light, and were now in great demand. So that each lover, as he sees the dainty waist of his inamorata encircled by one of these reinstated *ceinture de Venus*, may exclaim, if he remembers the couplet—

"Give me but what this ribbon bound,
And take all else the world goes round."

—*Bult. Patriot.*

The Spring.—It bubbles up from a soft soil, and flows away through rank grasses.—Coming up from a bed of gravel, it shifts its mouth, and if stopped in one place, it breaks out in another, like the heart's instincts, whose channels you may appoint, but whose flowing is beyond your control. I have often scooped away the soil trodden by cattle all about the cold boiling spring. For a moment the little pool was full of sand and mud; and I have never watched it clearing itself and coming back to transparency, without thinking that just so does life cleanse itself. A stagnant heart, when deeply disturbed, is long settling; but a living, out-flowing heart carries away its sorrows down its own stream' and deposits them speedily far from the fount.—*Henry W. Beecher.*

Good manners are the blossom of good sense, and it may be added, of good feeling too; for, if the law of kindness be written in the heart, it will lead to disinterestedness in little as well as in great things,—that desire to oblige and attention to the gratification of others, which is the foundation of good manners.

The foundation of domestic happiness is faith in the virtue of woman.

THE RURAL NEW-YORKER

ROCHESTER, DECEMBER 2, 1854.

SPECIAL NOTICES—TO AGENTS, &C.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ Those who are forwarding clubs, [20 to 50 copies,] can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ THE RURAL is published strictly upon the CASH SYSTEM—send no longer than paid for—and all orders should be in accordance with terms.

☞ In remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ In writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County and State. Write all names plainly.

☞ Those wishing their papers changed *from* one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ SPECIMEN numbers of the RURAL cheerfully forwarded to all disposed to aid in augmenting its circulation. We will send to your own, or the address of friends, all the necessary documents—extra numbers, show bills, prospectuses, &c. It will afford us pleasure to respond to all requests in this line.

A Timely Request.

AGENTS, and all others who are kindly making efforts in behalf of the RURAL, are requested to forward their orders as early and fast as possible. Our new books are already open, and if those interested will comply with the above request, we shall have abundant time to enter all names *correctly*,—avoiding such a *rush*, and consequent over-working of our clerical force, as attended the commencement of this volume. If those who are forming large clubs will at once forward the names and money already obtained, it will greatly facilitate our progress—not only enabling us to enter thousands of names before the busy season arrives, but afford such indications as to the probable demand, that we can decide with some degree of accuracy in regard to the edition that will be necessary. We have already concluded to add at least ten thousand to the present edition. Will not the friends of the RURAL give such *early* and *favorable* reports as to warrant us in adding from twenty to thirty thousand copies? If subscribers will *renew early*, and agents remit as soon as convenient, we can make such arrangements that all who desire the paper may have the complete volume,—and also avoid any delay in responding to orders, however large in numerous.

European Affairs.

WARLIKE operations in Europe have reached a crisis, and a terrible catastrophe cannot be much longer delayed. Several desperate battles have already been fought since the affair at the Alma, and in an engagement near Balaklava the flower of the British cavalry has been cut to pieces. Owing to the mis-construction of an order, the cavalry charged the Russian forces drawn up in solid column and defended in front and flank by heavy batteries of cannon. The charge was one of the most brilliant recorded in history, but it resulted in the loss of 409 men out of a total of 607.

The accounts of the campaign thus far have been received on this side of the Atlantic through British and French sources, and of course are colored by British and French prejudices, hopes and fears; but it cannot be any longer denied or disguised, that their enemy is quite competent, both in forces and courage, to cope with the allies. The seige of Sevastopol is still prosecuted with vigor, but the resistance is as desperate as the assault, and sorties from the beleaguered fortress give the besiegers no rest. Reinforcements from all parts of the Russian Empire are pouring into the Crimea, and the allied commanders have sent home the most urgent demands for additional troops. Nine first class steamers are taken up for instant service, and others are wanted. The Cunard steamer Alps is withdrawn from the berth for New York, and sailed on Sunday, the 12th, for Toulon, to embark Frenchmen. The Cunard steamer Europa would sail from Liverpool on the 18th for Kingston, Ireland, to ship drafts from the few regiments yet left in Ireland.—The Peninsular and Oriental (Mediterranean) Company notify that they have received imperative orders to withdraw from the mail service five of their steamers, for immediate reinforcements to the Crimea. The steamer Indiana, just arrived from New York, and the West India mail steamer Thames, are also taken up.—The haste manifested to transmit to the Crimea every available man,—Briton, Frenchman and Turk,—shows the importance attached to the demand for succor.

The news of further and decisive struggles may be looked for daily.

THE GROWTH OF IOWA.—The St. Louis *News* says that the vote of the last spring election in Iowa shows a great increase over that of last August, and the vote of the present August is much larger than last spring. Counties that had no returns eighteen months ago, now show a vote of two or three hundred. Not only are the eastern and western border counties advancing in population, but away in the interior of the State the hardy pioneers are settling down, and around them will soon gather dense settlements.

Railroad Accidents.

ON Wednesday, the 22d ultimo, a passenger train on the Harlem railroad overtook and ran into a New Haven freight train, near Fifty-Ninth street, New York city. The tender of the passenger engine was driven back into the first passenger car at least ten feet, smashing the car into fragments. Strange to say, no person was killed, although at least twenty passengers had limbs broken or were otherwise severely injured.

A freight and wood train on the Michigan Central road, says the Detroit *Inquirer* of Monday week, came in collision on Saturday, a mile east of Dunraigne, and five men were killed.

The engine of the Cincinnati Express train, on the Central (Ohio) road, recently ran over a cow near Albany, was turned completely over and badly damaged.

Two accidents occurred a short time since on the Galena and Chicago railroad, by which four of the best engines were disabled and a good deal of damage done to baggage and freight cars, but no person was seriously injured. In one instance, in which a freight and express train came in collision, the baggage car of the latter was completely destroyed, and nearly every trunk shared in the ruin.

Missing Lady.

THE community has become intensely excited, in consequence of the mysterious disappearance of Miss EMMA MOORE, who left the house of her brother-in-law, Mr. R. L. WHITNEY, on the evening of Tuesday, Nov. 21st, and has not since been heard of. All her wardrobe, money, letters, &c., were left behind, and nothing indicates an intention on her part of absenting herself from home. She was a girl of respectable character, and the opinion entertained by those who know her is, that she has been murdered. Several public meetings of the citizens have been held in the Court House, and adjourned meetings are to be held from time to time, until either the missing person is found, or efforts to that end have become exhausted. A good many flying reports in reference to the matter have gone abroad, all of which are probably unfounded, and the whole matter thus far is involved in mystery.

Collision of Steamers.

AS the Cunard steamer Canada was coming into Boston harbor on the evening of Friday, the 24th ult., she came to collision with the steamer Ocean, bound out and loaded with passengers. The Canada struck the Ocean amidships, staving a large hole in her side, and producing the utmost consternation among her passengers, several of whom leaped overboard from fright. The boiler of the damaged steamer soon after exploded, and the hull taking fire was burned to the waters' edge.

The Ocean was going down the bay in company with two other steamers, by the near proximity of which, she was compelled to cross the Canada's bows, and hence the collision.—Three passengers at least were drowned, one scalded so that he died, and five or six others were more or less injured.

SNOW STORMS.—Rochester and vicinity have been enjoying a kind of Indian Summer, while snow storms and Winter have been raging all around us. The cars, both from the East and the West, during the past week, came into the city frequently bearing unmistakable evidences of having passed through Boreas regions, the cow-catcher on the engine having run its nose into snow banks, and the trucks and platforms being covered with snow. Westward of us the snow in some places has been eight or ten inches deep, and east of us sleighs have even been put in requisition. Here, not over an inch of snow has fallen at any one time, and even that melted off again in a few hours. Our isothermal line passes far south of our neighbors, both east and west, and we would recommend them, if they desire to emigrate to a warmer climate, to come and settle in Rochester.

A DINNER.—The following proclamation set an example, which is not likely to be so extensively followed as to become a dangerous precedent:

He that giveth to the poor lendeth to the Lord. A proclamation by Louis Lewisson. In obedience to the dictates of my belief in the blessings of noo all-wise God unto Him who dispenseth liberally unto the poor, therefore, I, Loois Lewisson, of the City of Providence, State of Rhode Island and Providence Plantations, do hereby invite, indiscriminately of all religions, all poor people to call on the 30th day of Novenber, 1854, beginning at 7 o'clock in the morning and continuing through the whole day, and receive a good, substantial, Thanksgiving dinner, in front of my prosperous bazaar. And I further invite all the poor people who should happen to be sick to send their neighbors, a few weeks previous to Thanksgiving, to my bazaar, and leave the address of such poor sick people, and I will send them a good, substantial Thanksgiving Dinner, by my own express, to relieve them. And I further invite all my work-people who have ever worked for me since I came to Providence, to call on me privately, the day previous, and receive a bountiful supply for a Thanksgiving Dinner.

LOUIS LEWISSON.

PAT LIVING.—The Church Journal (English) gives a lusty case of preferment. Bishop Hampden, whose consecration was so energetically opposed by the Tractarians, has a son in the ministry. Within a few months his Rt. Rev. father has presented to this fortunate son first to a living of about $1,000 a year. A better chance offering soon, he was presented to a second parish worth $2,500 a year. And still another parish being in the Bishop's gift, and becoming vacant, the same lucky young Rev. is inducted into a third living, worth about $5,000 a year.

Literary Notices.

YOU HAVE HEARD OF THEM. By Q. New York: Redfield, 1854.

HERE is a volume of sketches of people every one has heard of—public characters of the present day—painters, musicians, actors, authors, and statesmen, met by "Q," whom we take to be a musical critic of some note. The book contains anecdotes and conversations of most of the extraordinary men and women now or lately before the public, and will serve to amuse a leisure hour of those who would learn more of VERNET, MOORE, MENDELSSOHN, ANDERSEN, JENNY LIND, Lady BLESSINGTON, LOLA MONTEZ, HENRY CLAY, G. P. MORRIS, CHARLOTTE CUSHMAN, BAYARD TAYLOR, &c., &c. Sold at DEWEY'S.

THE ILLUSTRATED NATURAL HISTORY. By the Rev. J. G. WOOD, M. A. With 450 Original Designs by WM. HARVEY. New York: Harper & Brothers, 1854.

THIS is a neat re-publication of an English work on the ever-interesting theme of Natural History, giving brief descriptions of the various beasts, birds, fishes, reptiles, and insects whose names are usually met with in our current literature. The illustrations are really neat specimens of wood engravings, and add much to the value of the book. We commend it to the purchase and perusal of our young readers. Sold by E. DARROW & BRO.

THE RAT CATCHER, or the Magic Flute. A Story of the Olden Time. Translated from the German by Mrs. H. C. CONANT. New York: Chas. Scribner, 1854.

BEAUTIFUL BERTHA. By Mrs. L. C. TUTHILL, author of "Braggadocia," etc., etc. New York: Chas. Scribner, 1854.

POPULAR TALES. By Madame GUIZOT. Translated from the French by Mrs. L. BORDE. Boston: Crosby, Nichols & Co., 1854.

HERE are three new candidates for the favor of the juvenile reading public—a public which no writer need be ashamed of having entertained and instructed. These works seem well calculated for that purpose, and, with many others of like character, may be found at DARROW'S Book store.

EVENTIDE, a Series of Tales and Poems. By EFFIE AYTOR. Boston: Tiltridge & Co., 1854.

THIS is a fair volume of some 400 pages, containing three tales and a number of short poems, sent forth with a very modest preface, and dedicated to the firesides of the Western World. It seems very well written, portraying scenes of the present stirring time, and no doubt will serve pleasantly to entertain the "eventide" hours of lovers of home,—which is all that is asked by its author. Sold by WANZER, BEARDSLEY & Co.

POEMS by WM. CULLEN BRYANT. Collected and arranged by the Author. New York: D. Appleton & Co., 1854.

IN this little volume we have all the poems of one of whom America may well be proud—the Author of "Thanatopsis," and "The Conqueror's Grave"—in a form very neat and acceptable to "the people." We have been waiting for just such an edition as the one before us, and think it must be popular everywhere. Sold at DEWEY'S.

THE NEWS BOY. New York: J. C. Derby, 1854.

A NEW and unknown writer sends out this thrilling story. It will find many readers, and many admirers, but some, and we among the number, will object to the way in which the religious characters introduced are caricatured.—Otherwise it is of fair moral tone, and calculated to do good. Sold at DEWEY'S.

SOUTHWARD HO! A Spell of Sunshine. By W. GILMORE SIMMS, author of "Vasconselos," &c. New York: Redfield.

IN a different vein from most of his former productions, Mr. SIMMS here gives us pictures of Southern Life and scenery, with a thread of incident connecting them,—the whole forming a very pleasant volume. Sold at DEWEY'S.

PROTESTANTISM IN PARIS—A Series of Discourses, Translated from the French of A. COQUEREL. Boston: Crosby, Nichols & Co., 1854.

WE have here half a dozen discourses by a celebrated French Protestant Divine, illustrating the character of Protestantism in Paris. Sold by DARROW & BRO.

THE LONDON QUARTERLY REVIEW for the October quarter closes the XCVIth volume. It is a very interesting number of that always valuable periodical, as a glance at its contents will show. $3 a year. L. SCOTT & Co., publishers. D. M. DEWEY, agent.

HARPER'S GAZETTEER OF THE WORLD, has reached its seventh number. The sixth, contains a fine Map of British America, and the last, one of Central America. It is a valuable work.—Sold at DARROW'S.

GODEY'S LADY'S BOOK for December came promptly to hand, and is well filled as usual. For the attractions promised next year see the Prospectus in our advertising columns. Notice also, that we club it with the RURAL for $4,00.

THE INDEPENDENT.—This excellent Religious Newspaper is achieving marked and deserved success. For ability and independence it is superior, and has become celebrated. For terms, &c., see Prospectus in our advertising department.

VERMONT MACHINERY FOR ENGLAND.—We noticed the other day, at the works of the Robbins & Lawrence Co., in this village, a beautiful lot of thirty machines, just completed, and about to be shipped for England, to be used there in the manufacture of government arms. They are the first lot completed on a large order (amounting, we believe, to about $100,000) recently given by the government agent, after inspecting the works of different establishments. This machinery is procured, we understand, for the purpose of introducing the American process by which the parts of different guns are made uniform and interchangeable.—*Windsor (Vt.) Chronicle.*

News Paragraphs.

☞ A girl by the name of Ellen White took the small pox in Boston a short time ago, and before her convalescence was completed, started on board the cars for her home in Thetford, Vt. During her brief journey of a few hours she communicated the loathsome disease to some dozen people who were on board the train in which she traveled, several of whom have since died.

☞ In opening a hundred cod-fish, one will find lobsters, whole or in part, in at least ninety. Some will be found entire, and others perfect in form but nearly digested. A lobster weighing not less than a pound has been repeatedly taken from a codfish that would weigh not more than six pounds. The number of lobsters destroyed by the cod in a season must surpass all conception.

☞ The Annapolis Republican says there is now living in the "Swamp," in the lower section of Anne Arundel county, a man by the name of Richard Crandell, who in one hundred and six years old, and is said to be very active and sprightly, and speaks of the improvement he intends to make on his farm like a man of forty or fifty.

☞ The Canal Board, at its last session, ordered an additional $2,500,000 of the work of the enlargement to be placed under contract.—This makes it in the aggregate the amount of $8,500,000 placed under contract this year, and the work has hitherto been let generally at 10 to 15 per cent below the estimates of the State Engineer.

☞ An ounce ball, apparently fired from a musket, passed through the dress of a woman while she was in the garden of her residence at Newburyport, on Friday week. The ball passed through all the folds of her dress near the feet, and buried itself in the ground a short distance from where she was standing.

☞ Within twenty years, about one hundred churches, numbering nearly twelve thousand converts, have been planted along the coast of Africa. Many schools have also been established, which are now in successful operation, and hundreds of natives have received and are now receiving a Christian education.

☞ The debt of the State of North Carolina is $3,330,001. The revenue from all sources is estimated at $200,000. As this sum is not sufficient to defray the State expenses and discharge the annual interest, a scheme will be proposed to the next Legislature to increase the taxes.

☞ The Ohio Journal of Tuesday week says: The Scioto river was frozen over last night. A big dog could walk across it this morning. As the canal is closed also, and there is not sufficient coal in the city for manufacturing purposes, we may expect the article to bring a pretty good price before next spring.

☞ There is danger that the culture of the vine in the old world will be abandoned. In Madeira they are beginning, it appears, to uproot their vineyards. The disease, like that with which the European grape is affected in this country, appears to be a species of mildew.

☞ The Washington Star, alluding to the scarcity of paper, suggests that abundant material for its manufacture may be found in the "waste" from the cotton mills of the South.—Why don't some of our Yankees look into this business?

☞ Efforts have been made by divers to recover the treasure lost in the Yankee Blade, but without success, no trace of it being found.—The wreck had drifted ashore, leaving the engine on the bottom where the ship struck, in about eleven fathoms of water.

☞ One of the most elegant churches in New York, now building in the upper part of the city, is paid for out of the proceeds of an acre of land, left many years ago by a parishioner to one of the clergymen, for the pasturage of a cow.

☞ A pair of pure bred Cashmere goats were recently bought by some gentlemen in Richmond, Va., for $1,500. The wool from another pair of the same lot, when examined by a microscope, compared precisely in fineness with the hair of a $2,700 Cashmere shawl.

☞ The new schooner Grand Turk, loaded with railroad iron, was recently run into by an unknown vessel on Lake Erie, and sank almost immediately. Will be a total loss. Insured for $12,000. Helmsman killed.

☞ In the Canadian Legislative Assembly Nov. 25th, bills were read for the third time abolishing the Feodal Tenure, and increasing the capitals of various Montreal and Quebec Banks to $7,000,000.

☞ The number of prisoners in the Vermont State Prison is 68. The want of religious instruction among the prisoners is complained of, and the appointment of a chaplain recommended by the State papers.

☞ Chevalier Wikoff, who so long courted the rich Miss Gamble, has "writ a book," entitled, "My Courtship, and its Consequences."—He finds, like many others, that Gambling isn't profitable.

☞ The Oswego Times says the barque Arabia went ashore near Sodus on Sunday night week. She has a cargo of 15,000 bushels of wheat from Milwaukee, which, together with the vessel, will probably be saved.

☞ A gentleman who has just returned from Nebraska informs the New York Mirror that the emigrants in that territory are already suffering much for the want of the necessaries of life, and are likely to suffer greatly before next spring.

☞ The Post says cart loads of salt water soaked oranges, from the wrecked steamer Jewess, are being sold very cheap in New York to the detriment of the health of the ignorant persons who eat them.

☞ The Chicago Democrat says: We notice that vessels are constantly getting aground in attempting to enter our harbor. This is particularly the case during a west wind. Measures should be taken to deepen the channel.

☞ M. Godard made an ascension in a balloon, from New York, on Tuesday week, accompanied by several persons. He landed a passenger at Whitestone one hour after he left New York, and left again on his aerial voyage.

☞ The drying house of Jacob Johnson, in Marlborough township, Montgomery co., Penn., containing two tons of gunpowder, exploded recently, killing Henry Whisker and Josiah, his son. The building was entirely destroyed.

☞ The libel suit, Fry vs. J. G. Bennett, of the Herald, is finally disposed of in the Supreme Court, by the refusal to grant a new trial on the application of Bennett. The $10,000 will now have to be paid.

News Brevities.

—— One of the Shetland Islands, Helldisca, was sold lately for $270.

—— David S. Reid has been elected U. S. Senator by the Legislature of North Carolina.

—— At the late election San Francisco cast 10,881 votes; Sacramento, 2,914.

—— Snow fell to the depth of a foot in Worth, Jefferson county, last week.

—— There are in New York city, 216 public schools, with 1,081 teachers, whose salaries amount to over $300,000.

—— A Mr. Marshall, colored preacher in Savannah, has attained the advanced age of ninety-eight years.

—— In St. Joseph, Mo., Langton, a man aged 62 years, has been sent to the penitentiary for 21 years.

—— A marble statue of Marshal de St. Arnaud is to be placed in one of the galleries of the palace of Versailles.

—— Mr. John Tagart, of Keokuk, Ill., lost his life by taking arsenic by mistake for cream of tartar, one day last week.

—— The Post Master General's report will speak more favorably of the working of the cheap postage system, than any since 1851.

—— A majority of the New Jersey Legislature is said to be decidedly opposed to the Railroad monopoly in that State.

—— A large snow storm prevailed at Saratoga on the 22d of Nov., and the sleighing was good.

—— It is stated that the morality of the Court of St. Petersburgh is the lowest in Europe, if Madrid is excepted.

—— A project for a Tunnel under the Ohio river at Louisville, is on foot. It is estimated to cost $1,200,000.

—— Santa Ana has ordered the construction of two more steamships at New York, for the Mexican service.

—— A correspondent of the Baltimore Sun says the Sandwich Islands will be annexed before the fourth of March next.

—— The experiment of running locomotive engines with Anthracite coal, has been very successful at Boston.

—— Accounts from Texas say that General Houston was organizing the Know Nothing party in that State.

—— The Boston Post estimates that $45,000 was taken at the Boston Theatre during the late engagement of Miss Julia Dean, of four weeks.

—— During the six days ending October 28, upwards of 51,000 tickets of admission to the Crystal Palace, Sydenham, were sold.

—— A farmer named McDonald, in the township of Goderich, Canada, succeeded in freeing four bears on the 4th ult., and then shot them.

—— The propeller Hinloken, from Albany for New York with several hundred cattle, sunk on Saturday week in the Hudson river near Athens.

—— A man in Detroit has been fined fifty dollars and sent to jail for sixty days, for whipping his wife the second night after marriage.

—— Gardiner is the first Governor elected by the people in Massachusetts since 1847. The Legislature elect when the people fail of a majority.

—— The venerable Parson Sawyer preached on Sunday last week at Bangor. He is now in his *one hundredth year*, and about the twenty-fifth of his ministry.

—— The publishers of "Ida May," in a published note, say "it is due to all parties to say that Ida May is the production of an author as yet unknown to fame."

—— At Oshkosh, Wis., there is a floating pottery, with a lathe turned by bears. They are said to be contented looking animals, and do not seem to dislike the occupation.

—— Beautiful iron ore in abundance, has been found up the valley of the Platte River, in Nebraska. It has been judged that it will yield thirty per cent.

—— The Report of the Secretary of the Treasury will include the statistics of commerce and navigation, which are not usually furnished till January.

—— It is expected that the American Hotel in Paris, will be completed about the first of May. It will accommodate, when finished, about 1,500 persons.

—— The Journal de St. Petersburgh announces that by an ukase, Prince Menschikoff is appointed Commander-in-Chief, and Governor of all the Imperial forces in the Crimea.

—— Capt. McKay's clipper ship Great Republic, which was nearly destroyed by fire last winter, has been rebuilt at New York and laid on the berth for San Francisco.

—— The Chicago Journal says that the Hotels in that city are entirely inadequate to accommodate the travelers who seek lodgings within them from day to day.

—— The extensive tanning house of Brown & Sons, of Arbroath, Scotland, has failed, with liabilities amounting to £90,000 sterling, or nearly four hundred and fifty thousand dollars.

—— The Viceroy of Egypt has lately ordered 5,000 of Colt's revolvers for the equipment of his cavalry; and the British Board of Ordnance dispatched, some time ago, 10,000 to the Baltic.

—— Several persons died very suddenly in Salisbury, Md., last week, immediately after indulging freely in eating oysters. The symptoms are said to have been those of Asiatic cholera.

—— The Salem Register says that the schooner John, which sailed lately from Boston for Jonesport, Me., was built in Salem, Mass., in 1803, and is consequently fifty-two years old.

—— A man who has long resided in Ogdensburgh has been caught in the deliberate act of firing a building in that place. It is thought he is the author of the many recent fires there.

—— The city of St. Paul, Minnesota, now contains between six and seven thousand inhabitants. A correspondent says,—"Our emigration this fall has not, in the history of Minnesota, been equalled."

—— A flock of eighteen hundred sheep was driven through the town of Frederick, Maryland, a few days since, on their way from Vermont to Fauquier county, Va. They were of fine wool varieties.

—— William Walker, of London, has bequeathed £1,000 to the poor of his native city, Perth, the income to be expended in blankets, coals and oatmeal, in November each year, forever.

—— From the statements of the passengers of the New Era, it is probable that the loss of that vessel, and the melancholy sacrifice of human life, are to be attributed to the neglect of the officers.

THE RURAL FOR 1855.

PREMIUMS FOR SUBSCRIBERS:

ONE HUNDRED DOLLARS for the largest list of Yearly Subscribers to the RURAL NEW-YORKER,—the payment to be remitted according to our Club terms, previous to the 1st day of February, 1855.

EIGHTY DOLLARS for the next (second) largest list, as above specified.

SEVENTY DOLLARS for the third list.
SIXTY DOLLARS for the fourth list.
FIFTY DOLLARS for the fifth list.
FORTY DOLLARS for the sixth list.
THIRTY DOLLARS for the seventh list.
TWENTY-FIVE DOLLARS for the eighth list.
TWENTY DOLLARS for the ninth list.
TEN DOLLARS to each of the *five* persons sending the 10th, 11th, 12th, 13th, and 14th lists, as above.
FIVE DOLLARS to each of the *five* persons sending the 15th, 16th, 17th, 18th, and 19th lists.
THREE DOLLARS to each of the six persons sending the 20th, 21st, 22d, 23d, 24th, and 25th lists.

☞ We also offer the following very liberal list of

CHRISTMAS CASH PREMIUMS.

FIFTY DOLLARS for the largest list of subscribers to the RURAL NEW-YORKER, mailed or mailed according to our terms, on or before the 20th day of December ensuing, (1854.)
THIRTY-FIVE DOLLARS for the next largest list, as above.
TWENTY-FIVE DOLLARS for the next list.
FIFTEEN DOLLARS for the next list.
TEN DOLLARS for the next list.
FIVE DOLLARS for the next list.

☞ Persons competing for Christmas Premiums are not excluded from the February prizes, so that one person may secure *One Hundred and Fifty Dollars, in Cash!*—another *One Hundred and Fifteen Dollars*, &c.

(In order to give Post Masters, Local Agents, &c., a fair and equal chance, Traveling agents, post-riders and citizens of Rochester are excluded from competition for any of the above Premiums.)

SPECIFIC PREMIUMS.

In order to REWARD EVERY PERSON who may aid in extending the circulation of the RURAL NEW-YORKER, we offer to such as do not compete for any of the preceding Premiums, the following liberal gratuities for subscribers forwarded *previous to the 1st of April*, 1855:

THREE DOLLARS, in BOOKS, or a handsomely bound volume of the RURAL for 1854, for THIRTY subscribers.

To every one remitting for twenty copies ($25,) an extra copy of the RURAL and either volume of the WOOL GROWER AND STOCK REGISTER—*or*, THE HORTICULTURIST for 1855.

The same premium to every one remitting for FIFTEEN copies, ($20,)—for TEN copies ($15.)

To every one remitting for six copies ($10,) an extra copy of the RURAL, *or* the HORTICULTURIST for 1855.

For $5 we will send THREE copies of the RURAL, and either vol. of the WOOL GROWER AND STOCK REGISTER.

For $4 we will send one copy of the RURAL, and either Putnam's, *Harper's, the Knickerbocker, Lady's Book*, or *Graham's Magazine* for one year.

For $3, we will send a copy each of the RURAL and the HORTICULTURIST for 1855.

All competitors for premiums are expected to adhere strictly to the following

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR. *Three Copies, one year, $5—Six Copies for $10—Ten copies for $15—Fifteen Copies for $20—Twenty Copies for $25, and any additional number at the same rate.* ☞ *As we are obliged to pre-pay American postage, our lowest Club price to Canadian subscribers is $1,50 per copy.* ☜ *To facilitate mailing, we prefer sending Club papers to one address at each post office, but the names of subscribers will be written on the papers if desired. Club papers sent to different post offices, and names can be sent in at different times. Bills of all specie paying Banks received at par on subscription.*

☞ Specimen numbers, show-bills, prospectuses, &c., sent free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE,
Oct., 1854. Rochester, N. Y.

Foreign Intelligence.

Arrival of European Steamers.

Four European steamers have arrived during the week, viz:—The Liverpool and Montreal steamer Canadian, which connects at Portland (Me.) with the Atlantic & St. Lawrence Railroad, arrived on the 22d; the Cunard steamer Canada arrived at Halifax Nov. 23d; the Hermann, at New York, Nov. 24th, and the Collins steamer Baltic, also at New York, Nov. 25th. The news from Europe by these steamers, is of a highly important and interesting character, being eight days later from the seat of war,—Fighting before Sevastopol continues, and several desperate encounters have taken place between the belligerents; accounts of which vary essentially, according to the sources from whence they are derived.

Seven of the first class English steamers have been taken up for instant service in other quarters. The Alps sailed on the 11th for Toulon. The Europa will go to Kingston on the 18th, and numerous others, including the Indiana, New York, &c., were under orders to embark troops.

The disastrous results of the battle of the 26th to the English is confirmed, though it is not quite so bad as reported. It was all owing to the misconstruction of an order from the commander-in-chief. Lords Ducau and Cardigan rode the light horse over a plain a mile and a half in length, and were exposed to a cross fire full of a Russian battery of 30 guns. The attempt was madness and the result destructive. Out of 609 only 198 returned, and these must have also been destroyed but for a magnificent charge to the rescue by the heavy dragoons, and a brave stand of the Highlanders, which redeemed the day.

A despatch from Menschikoff, sent to Berlin in cypher, says:—"Unusual activity had been observable in the allied camp, and doubtless preparations were being made to storm. Liprendi, reinforced by corps sent by Menschikoff, had attacked the allied camp, and killed 800 men. This report, however, is doubtful, as also a statement that a practical breach was opened in the walls on the same day."

Gen. Canrobert's official report of the battle of the 5th November, is published in the Moniteur of the 13th. He says:—"The Russian army is swollen by reinforcements from the Danube as well as by the combined reserves of all the Southern Provinces, and animated by the presence of the Grand Duke Michael and Nicholas, attacked yesterday, November 5th, the right of the English position before Sevastopol.

"The English army sustained the attack with united firmness and solidity. I supported it by a portion of Gen. Bosquet's division, which fought with admirable vigor. The enemy, who, far outnumbered our force, beat a retreat, with a loss estimated at 8000 to 9000 men. The struggle lasted the whole day. At the same time, Gen. Forey was forced to repulse a sortie made by the garrison, and under his energetic command the enemy were driven back into the place, with the loss of 1,000 killed and wounded. The brilliant day, which was not purchased without considerable loss to the allies, does the greatest honor to our armies. The seige continues with regularity.

The English accounts corroborate the above, but the Russian statement, on the other hand, puts quite a different face on the affair. A telegraphic despatch from St. Petersburgh of the 15th, states that Menschikoff reports, under date of November 6th from Sevastopol, that on the 5th the garrison made two sorties—one against the right flank, which was successful, and resulted in the capture of one of the enemy's batteries, the guns of which were spiked. Loss very heavy on both sides. The second sortie was also completely successful—the Russians having spiked 15 guns. Immediately afterward the French infantry division, pursuing the retreating Russians, attempted to commence the assault, but was thrown back with immense loss.

The British Parliament is further prorogued to the 14th of December. 50,000 French troops are to be sent to the Crimea, England paying half the expenses.

The overland India mail had been telegraphed, with China dates to the 13th Sept. Canton still tranquil. Trade is at a stand. Considerable fighting secretly—result unknown.

The British, French and American Plenipotentiaries were to proceed to a revision of the treaties with China.

From Alexandria, Egypt, it is telegraphed a new levy of troops has been ordered in aid of the Sultan.

THE LATEST.—At Vienna the prevalent opinion was that a few more such victories would compel the allies to raise the seige. Menschikoff appears to be of the same opinion, for in a despatch to Paskiewitch he says:—"It will be impossible for the allies to continue the seige, and I continue to harrass them."

The London Times' Paris correspondent says that Canrobert had assured the French government that the Russians were so weakened in the affairs of the 5th, that for ten days to come they would not be in a condition to resist an assault upon the town; that he intends to make the attempt. He calls the allies' loss 5,000—English, French and Turks.

LIVERPOOL MARKETS.—Messrs. Brown, Shipley & Co. say the market is quiet, with a decline of 2d on wheat and 6d on corn. Other circulars, while admitting the market to favor buyers, shows but little if any change.

Beef and Pork were in good demand. Bacon dull, 36@37s. Flour a shade firmer—5,38@5,45. Tallow advanced 1s.

California News.

Arrival of the George Law.

THE steamship George Law, Lieut. G. N. Fox, left Aspinwall at 12 o'clock on the night of the 15th inst., and arrived at Quarantine, New York, the 21th. She brings the California mails of the 1st inst., $1,568,644 in treasure on freight, and 123 passengers, brought down on the Pacific side by the Pacific Mail Steamship Company's steamer John L. Stevens.

CALIFORNIA.—Since the sailing of the steamer of the 16th, business has been quite brisk. A large amount of goods have gone into the interior, and still the tide continues to flow in that direction.

From the mining regions the news is favorable, though heavy losses have been sustained on some of the streams by the partial floods, the natural consequence of the heavy rains which have fallen lately. Hill and dry diggings are still highly productive, and the announcement of further discoveries of rich deposits are continually being mentioned. Places where gold was not thought to exist up to the past year, have been prospected and found rich in the precious metal. The material evidence in the form of gold dust constantly arriving from the mining regions is the best evidence that the mines are yielding handsomely.

GOLD DISCOVERIES IN LOWER CALIFORNIA.—Gold has been discovered in large quantities in a place called Los Marilos. These placers were abandoned for want of water, but as soon as the rainy season sets in they intend to recommence digging. In the valley of San Rafael it was reported that an Indian found gold on the surface, and that he had brought in near a pound to San Rafael. If the discoveries of gold prove true, Lower California may hope for better things in future.

OREGON.—The Oregonian, of October 16, says: T. G. Robinson, Esq., of this city, returned a few days since from a visit to east fork of Lewis River. Mr. Robinson brought with him some fine specimens of gold, which he obtained by pan washing, only one day's ride from Vancouver.

Capt. Olney and party had returned to the Dalles, finding it impossible to get a fight with the Indians.

A University is to be built at Corvallis. Contracts for the stone and brick have been given.

WASHINGTON TERRITORY.—Dates from Olympia, Puget's Sound, are to Oct. 15.

The steamer Major Tompkins arrived at Olympia on the 9th of October, from Victoria, Vancouver's Island, with news of the English fleet that had been engaged in the attack on Petropoloski. The President, the Pique, and the Virago, arrived at Esquimalt, Vancouver's Island, on the 5th of September.

SANDWICH ISLANDS.—Mr. Miller, the British Consul General at Honolulu, in his speech before the King and Privy Council, Sept. 18, took occasion to say that he should protest against the annexation of the Sandwich Islands to the United States.

On the evening of the 25th ultimo, the first President of Oahu College, Mr. E. G. Beckwith, was inaugurated at the Court House.

AUSTRALIA.—Sydney dates are to Aug. 15th. The receipt of gold for the fortnight ending August 1, was 10,150 ounces. The total export (since the 1st of January, probably,) had been £6,777,501, or equal to $33,000,000.

Marriages.

On the 15th ult., by the Rev. Olney Place, Mr. JAMES M. WILTSIE, of South Marcellus, and Miss JULIA H., only daughter of Alfred Veazie, Esq., of Dilton.

In Durham, Conn., Nov. 15th, by Rev. Mr. Page, Prof. H. WILCOX, Principal of the Wilson Coll. Institute, and CAMBRIE E., youngest daughter of the late P. Parmlee, Esq.

In Henrietta, Nov. 23d, by the Rev. S. W. Streeter, Mr. ARTHUR F. MACKEY and Miss SARAH PERRIN.

Commercial.

BUSINESS AND FINANCE.

THE steamer Geo. Law, from Aspinwall, arrived at New York November 21th, having on board $1,567,541, and the America from Boston on the 22d, took out $561,227 in gold bars and £1,056 in sovereigns. The Atlantic, on Saturday last, also exported $262,000. The aggregate of gold exported for 1854 to the present date is $38,901,000 against $23,956,000 to same time in 1853. The import of Foreign Merchandize for the calendar year, by the semi-official weekly returns to the present date, is $109,775,000, against $174,566,000 to same date last year.

Money is tighter in New York than it has been for a long time previous, and the effects are disastrous on business there and elsewhere.

In this city it is stated that one or two firms extensively engaged in iron manufactures, have stopped payment. It is rumored that a meeting of officers of the several Banks in this city was held on Saturday, with a view to more amicable relations among themselves during the present money pressure.

Stocks are lower generally than they have been since the panic a few months since. Erie reached 91¼ ₹ cent., and Central New York, the lowest ever yet touched, 75¾.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Nov. 21, 1854.

WHEAT quotations remain the same as last week, although a few transactions have occurred outside that figure.—Flour has advanced slightly, selling to the trade at $10,25 @10,62½. Oats have advanced a cent, and Corn five cents per bushel. The combination of Brewers and Maltsters to keep Barley at a dollar failed in its object, and it sells to-day at nine shillings for prime.

Pork is a little better; other meats unchanged.

ALBANY MARKET—Nov. 27.

FLOUR—Our market for Western and State Flour presents no new feature worthy of notice. Western continues scarce and very firm, with sales only in a retail way at the closing prices of Saturday. Sales at $8,62@8,25 for com. to good State and Western; $9,25@10,25 for extra Ohio and Genesee. Corn Meal is firm at the recent advance, with sales to a fair extent at $4,31@4,37 per 100 lbs. Buckwheat Flour is salable at $1@1,22 per 100 lbs.

GRAIN—In Wheat nothing doing. Corn firmer, with sales of Western mixed at 92c. Barley unchanged in value, but more active; sales two and four-rowed at $1,32@1,34 cash, and $1,38@1,39 Wmo. Rye held at $1,35. Oats active and firm; sales State at 51@52c, measure.

HOGS.—Sales 30 dressed Hogs at $5,02½. Market range $5,50@5,75.

BUFFALO MARKET—Nov. 27.

FLOUR—There was scarcely any inquiry this morning, and the sales are consequently few—only 200 bbls. choice Michigan and Indiana at $9,75.

GRAIN—No transactions in grain of any kind, buyers not yet in market. Receipts are all kept back by the succession of gales we have had for the last few days.

EXTENSIVE SALE OF THOROUGH BRED DURHAM STOCK, LEICESTER SHEEP, &c.

THE subscriber, in consequence of continued ill-health, being about to abandon farming, will sell by public auction without reserve, at his farm, adjoining the St. Catharine station of the Great Western Railway, on Thursday, the 7th of Dec., the whole of his valuable stock, comprising several Provincial prize animals of this and previous years.

Terms—12 months credit on approved endorsed paper, with interest. A. C. HAMILTON.
Grantham, C. W., Nov. 20, 1854. 256-W

Advertisements.

ADVERTISEMENTS inserted in the RURAL NEW-YORKER at 15 cents a line, each insertion,—*to be paid in advance.*—Brief advertisements preferred, and we do not wish to give any one more than four successive insertions. Our space is limited, and we wish to accommodate and benefit as many applicants as possible,—at the same time interesting our readers by presenting something new, weekly.

NOTICE.—Having ascertained that Mrs. ALEXANDER, of this city, has been soliciting and receiving donations for the "Home for the Friendless," its Board of Managers would notify the public that she is not, and has never been, authorized to do so. 256-tf

THE INDEPENDENT.

The Largest Religious Paper in the World!
Edited by Pastors of Congregational Churches in New York and vicinity.

Among the contributors to its columns are
Rev. HENRY WARD BEECHER,
Rev. GEORGE B. CHEEVER, D. D.,
Mr. CHARLES L. BRACE,
Mrs. HARRIET BEECHER STOWE,
and many other celebrated writers.

CORRESPONDENTS
from all sections of the Union, from England, France, Germany, Switzerland, Italy, and the Holy Land, contribute to enrich the columns of this JOURNAL.

In addition to its being the largest, it is also the cheapest religious paper in the world; and being published solely with the view of advancing the cause of religious truth, it is sold at the *cost price*. Its proprietors are entirely independent of the paper as a means of support, (being engaged in mercantile business) and are determined to spare no expense to make it unsurpassed either in the variety, richness, or extent of its matter; it will be sold as the following

TERMS.—$2 per annum by mail, if paid *in advance*. Orders for the paper, accompanied by the money, addressed to the publisher, and pre-paid, will be considered at our risk.

NOW IS THE TIME TO SUBSCRIBE,

Whether you wish for the paper immediately, or at a future date. We are daily receiving subscriptions to begin January 1, 1855. Those who wish to commence then should send in their names early, and thus insure the reception of the first numbers of VOLUME SEVENTH.

Our circulation, never so large as at present, is increasing at the rate of
TWO HUNDRED AND FIFTY TO THREE HUNDRED A WEEK!!!

AGENTS.—Clergymen are authorized Agents, and are solicited to engage in the work of extending our circulation. For every five new names they may send, with ten dollars, we will forward a *sixth* copy gratis for one year.

"Put none but Americans on Guard to-night."

KNOW-NOTHINGS!! AMERICANS!!!

THE BOOK FOR ALL OF YOU.

"The Know-Nothing Token," A Wide-Awake Gift For 1855.—Edited by "One of 'Em."

The following distinguished American Writers, on American Subjects, adorn the pages of this truly AMERICAN BOOK:

W. C. Bryant, J. R. Drake, R. W. Emerson, Mrs. L. H. Sigourney, the Hon. J. W. Savage, F. S. Key, Dr. Thomas D. Read, Joseph Hopkinson, H. W. Longfellow, H. Fuller, L. C. Levin, H. F. Gould, the Hon. Daniel Webster, Grace Greenwood, E. Everett, T. Dwight, John M. Mason, John Pierrepont, Dr. Beecher, W. G. Simms, E. P. Whipple, J. G. Percival, L. D. Levin, O. W. Holmes, Emma Brooks, W. D. Gallagher, E. H. Chapin, the Hon. George Bancroft, W. H. Burleigh, the Hon. Caleb Lyon, G. Mellin, L. McLellan, Jr., J. G. Whittier, Chief Justice Marshall, E. Oakes Smith, R. T. Paine, Jared Sparks, Seba Smith, Andrew Jackson.

WITH FIVE ELEGANT STEEL ENGRAVINGS.

Viz., "The Marriage of Washington," "Goddess of Liberty," "Portrait of Washington," "Portrait of Daniel Webster," "Spirit of '76," "Portrait of Martha Washington." Together with "Washington's Farewell Address," "Constitution of the United States," and the "Declaration of Independence."

The following are a few of the strong recommendations of the Press:

The getting up of this nice volume was a happy thought. It awakens and invigorates the noblest patriotic sentiments, and, withal, fortifies patriotism by Bible religion. The volume opens with Washington's Farewell Address, among the richest legacies ever bestowed by a patriot upon his country; and then follows, in prose and poetry, the happiest and most soul-stirring appeals to the reason and heart of Americans, warning them of the danger of foreign influence adverse to their free institutions, and exciting to sleepless vigilance in their perpetuation.

The book gives a clear exhibition of what the "Know-Nothings" are; shows the necessity for such an association; and excites an earnest hope that they may be preserved and prosper as the life-guard of civil and religious liberty.—*Christian Advocate and Journal.*

—This is a sterling manual, full of living truth which must be commended by every editor who is not a Jesuit at heart, and find a response in the soul of every lover of American soil and institutions. Every page in it is of sterling value, and should be committed to memory, and handed down from father to child. The matter in such a book is its own best advertisement. Washington and all the worthies following after him, here speak in the living present, and poets of the soul set to glowing measure the glories of our Protestant birthright.—*Albany Spectator.*

The whole making one elegant 12mo. volume. Price $1. The same in full gilt, sides and edges, $1,50. For sale by booksellers generally.

Copies sent by Mail, on receipt of price

These Sheep are from, or descended from the flocks of the well-known breeders of pure bred Sheep, Messrs. Jewell, Durell, Avery, Wakeman, McIntyre, Brodie, &c. For further particulars address me (post-paid,) at Belleville, Jefferson Co., N. Y.
252-1aeow E. G. COOK.

The Wool Grower and Stock Register is worth $10,00 a year to every one engaged in raising stock. It is furnished for fifty cents.—*Family Visitor.*

GODEY'S LADY'S BOOK FOR 1855.

Twenty-fifth year of Publication by the same Publisher.

The only Lady's Book acknowledged by the ladies of this country as worthy of its name.

PRINCIPAL POINTS OF ATTRACTION FOR 1855.

It contains 160 pages of reading in every month's number—containing with a large number of pages in January, and does so throughout the year.

BEAUTIFUL STEEL PLATES, LINE OR MEZZOTINT, In every Number.

GODEY'S BRILLIANT STEEL FASHION PLATES [colored] In every No.—the only Fashion Plates that are considered as authority.

KNITTING, NETTING, & EMBROIDERING, printed in colors.

MUSIC—TWO PAGES MONTHLY.

EASY LESSONS IN DRAWING—are given monthly.

Godey's Invaluable Receipts, worth alone *Three* Dollars a year—for Cooking, the Toilet, Sick Room, Nursery, and Miscellaneous Housekeeping Receipts.

PATTERNS AND PLANS,
With full directions for Ladies to cut their own dresses.

PATTERNS FOR CHILDREN'S DRESSES,
Both Male and Female.

EMBROIDERY & BRODERIE ANGLAISE PATTERNS Every month—a great variety.

THE NURSERY.—This Department is invaluable to every Mother.

MODEL COTTAGES.
Great attention paid to this Department.

A TREATISE ON THE HAIR.

A most excellent article for the preservation and beautifying of this most valuable ornament to both sexes.

Undoubted Receipts, Model Cottages, Model Cottage Furniture Patterns for Window Curtains, Music, Crochet Work, Knitting, Netting, Patchwork, Crochet Flower Work, Hair Braiding, Ribbon Work, Chenille Work, Lace Collar Work, Children's and Infant's Clothes, Caps, Chemisettes, Bonnets, Cloaks, Evening Dresses, Fancy Articles Head Dresses, Hair Dressing, Bridal Dresses, Mantillas, Riding Habits, Morning and Evening Dresses, Cloaks, Talmas, Robes de Chambre, Capes and Cloaks of fur to season—in fine, everything that can interest a Lady, will find its appropriate place in her own Book.

REMEMBER that the Lady's Book has always given Steel Engravings, and throughout the year, not publishing them in January and February numbers, and then omitting them. In the Lady's Book alone you receive what no other three Magazines can furnish you.

EVERYDAY ACTUALITIES.

This is another series of articles peculiar to this Magazine. Every one of these articles is illustrated with at least eight or ten of the finest wood engravings. This department is very interesting, conveying information in an agreeable form, suitable for ladies and gentlemen, that cannot be obtained elsewhere.

The expense of one number of the Lady's Book, including steel engravings and literary matter, paid for, not taken from English Magazines, far exceeds that of any other Magazine published in this country. We make no exception, and are willing to have the fact tested.

T. S. ARTHUR'S HOME MAGAZINE FOR 1855. Four Copies a Year for $5.

PREPARATORY to new efforts by the VERY LARGE INCREASE OF SUBSCRIPTION during the past year, the publishers of the Home Magazine will GREATLY IMPROVE the coming volumes, and add many leading attractions. The work is to be printed on ENTIRELY NEW TYPE, so that its typography will be equal to that of any magazine in the country.

The Home Magazine, during the year 1855, will contain between 800 and 1,000 double-column octavo pages of carefully edited Reading matter. It will, in addition, be largely illustrated in the best style of Art, with elegant Steel and Colored Engravings, and by several hundred fine wood Engravings of Tales, Scenery, Remarkable Places, and objects in Science, Art, Natural History, Needle-work, the Latest Fashions, Articles of Dress, &c.

ALL FOR $1,25 A YEAR, IN CLUBS OF FOUR SUBSCRIBERS.

The Cheapest Monthly Magazine in the World!

The Editor refers to the literary character and quality of the work in the past for what it will be in the future.—He pledges himself to keep its pages free from everything that is ill-natured, profane, or vulgar; while, at the same time, he will seek to impart thereto the highest possible degree of interest.

It is designed especially for HOME READING, and embraces articles covering the widest range of subjects. Fiction, History, Biography, Philosophy, Science, Wit, Anecdote, Travel, &c., are blended with care and discrimination.

The Editor's own pen will be busy during the year, and furnish, as heretofore, stories, sketches, and one or more original novelettes.

TERMS:

One Copy for one year		$2,00
Two Copies	" "	3,00
Three Copies	" "	4,00
Four Copies	" "	5,00

☞ All additional subscribers beyond four at the same rate; that is $1,25 per annum.

☞ Where Two to Subscribe and $15 are sent, the getter up of the Club will be entitled to an additional copy of the Magazine.

☞ The January number will be made early in December. *Specimen numbers furnished to all who wish to subscribe or make up clubs.*

☞ PREMIUMS.—A variety of liberal premiums are offered. Among these is a library of 200 volumes for the largest number of subscribers sent in by the 5th of April next; 100 volumes for the next highest list; 75 volumes for the next; 50 volumes for the next, and a handsome Family Bible for the fifth highest list. Besides, there are special premiums for all who fail in obtaining any of these, according to the number of subscribers sent.

T. S. ARTHUR & CO.,
255-tf 107 Walnut St., Philadelphia.

HOME PROTECTION.

Tempest Insurance Company, Capital $250,000, Organized December 21, 1852; Chartered March 4, 1853. Homes only Insured by this Company. No one risk taken for more than $3,000.

Many distinguished persons have insured their homes, to the amount of $3,000 each, in this Company, among whom are Ex-President VAN BUREN, Kinderhook; Ex-Governor SEWARD, Auburn.

AUBURN, May 16th, 1850.

To whom it may concern:—We are personally acquainted with many of the Officers and Directors of the Tempest Insurance Company, located at Meridian, Cayuga Co., N. Y. In our opinion they are among the most wealthy and substantial class of Farmers in this county.

J. N. STURIN,
ELMORE P. ROSS,
THOMAS Y. HOWE, Jr.

The above gentlemen will be recognized as the Cashier of Cayuga County Bank, Auburn; Postmaster, Auburn, and Ex-Member of Congress, Auburn, Cayuga County.

N. B.—The public are cautioned to bear in mind the name, (*Tempest,*) and not submit to an imposition daily practiced by two-by-four Mutual Co's.
231-1t T. R. TILLEY, Secretary.

TRUNKS AND VALISES.

THE subscriber would inform the citizens of Rochester and the public generally, that he is manufacturing extensively, a very superior article of sole leather and steel spring Trunks, which he will guarantee to be equal to anything made in the United States.

You may see at PRITCHARD'S Trunk Depot and Sales Room, 78 State street, 1650 Trunks and Valises, and he is now adding to this large stock from 125 to 150 per week—among which you may find Trunks varying from one dollar to fifty. If you should want anything in his line, give him a call, for his motto is, "Large sales and small profits."

A. R. PRITCHARD, No. 78 State St.
Rochester, N. Y., Aug., 1854. 240-W

BUFFALO SEED AND AG'L WARE-HOUSE,

No. 196 Main street, Buffalo, N. Y.

EMERY'S Horse-Powers, Threshers and Separators, Seymour's, Pennock's and Ross' Grain Drills, Hitchcock's and Bailey's Cider Mills.

Together with a full assortment of Hay Cutters, Plows and other Implements, always on hand, at lowest market rates.

N. B.—Country dealers supplied on liberal terms.
244 H. C

Poetical.

(Written for Moore's Rural New-Yorker.)

MEMORY.

When youth's fair hours have passed away,
And each young joy has fled;
When all bright hopes, as yesterday,
Lie silent 'mong the dead;
How sweet to dwell on each bright eve
That once we have enjoyed,
To gaze, as o'er, on skies serene,
And taste joys unalloyed.

As when on ocean's billows cast,
Our shattered barque lies prone,
And, 'mid the fierce and howling blast
E'en hope has well nigh flown;
Affection's chords around the soul
Draw closer, in that hour,
And o'er the sea of memory roll,
Joys, with unwonted power.

Thus when the fierce dark hours of grief
Our aching hearts roll o'er,
And no kind hand with quick relief
Comes in as of yore;
How sweetly joys long gone, return,
And cluster round the heart;
While friendship's altars newly burn,
Fresh hope and life impart.

How fondly in life's darksome day,
When clouds are big with sorrow,
And from on high no kindly ray
Speaks of a glad to-morrow,
Does memory cherish pleasures past
And joys of earlier years;
Thus seeks to wash from cheeks the fast
And bitter flowing tears.

Ionia, Michigan, Nov. 1854. S. A. E.

Rural Sketch Book.

FINDING MONEY:
OR, THE TEMPTATION RESISTED.

William Carter arose from a fitful and uneasy slumber. The night had been cold and windy—such a night as December usually brings among the hills of New Hampshire—William's bed was hard, and the cold wind had found its way through many a crack and crevice in his ruinous cottage; but he might have slept if his mind had been at ease. His wife was a delicate woman; toil and exposure had brought on a lingering illness, and she lay all night moaning with pain and shivering with cold. William arose, and having kindled a fire, went forth into the open air. The clouds were black and heavy, and the winds swept in gusts through the naked trees. Away in the distance the tops of the hills were already white with snow. He had engaged a day's work on a neighboring farm; but it was useless to go, the farmer would not work that day; so he turned away with a heavy step and entered his dwelling. The children were soon stirring, and the pale, suffering mother rose from her couch to prepare the morning meal. A few potatoes were boiled for the father and children, and a cup of gruel for herself.

William Carter and his wife had seen better days; but sickness and misfortune, the fraud of some, and the cruelty of others had driven them forth from their pleasant home (which he had spent the strength of his early manhood to purchase, and forced him to take shelter in their present miserable abode.

"Why can't we have some bread and butter?" said little James, a child six years old, pushing away the potato which was offered.—"We used to have bread and pies; and I don't want potatoes all the time."

An expression of agony passed over the father's face. Bitter feelings were rushing through his heart—murmurings against Providence—repining at his lot—unbelief in God.

"I would bear everything but this," murmured he. "I can bear toil, humiliation and want myself; but I cannot see my children pine for bread, and my wife shivering in this miserable hovel! If there is a God, why does he suffer the rich to oppress the poor, and the strong to crush the weak? I feel sometimes like taking justice into my own hands, and with my own arm avenging my cause."

But the storm was soon over. Softened by the tender, hopeful words of his afflicted wife, his bitterness of spirit passed away. His poverty and his wrongs were all forgotten, in the memory of his sinful anger and murmurings.—The spirit of other days returned—the divine triumphed over the human; and they bowed down before God, and the loving confidence of little children, casting all their cares on His mighty arm, and committing the future to his direction.

A storm was evidently coming on outside. Already the snow began to fall; but there was not wood enough at the door to last two days, and William must go to his neighbor to get permission to cut a few trees, or at least to pick up the limbs that were lying about. He buttoned up his coat and went out. Already a thin white drapery lay over the bosom of the earth, twisted into graceful knots and wreaths. He stepped on something which moved beneath his foot—and, looking down he saw a large pocket-book half covered with snow. A sudden flush of joy flashed through his heart.—Seizing it, he turned his face from the wind to examine the contents. There was a roll of bank-notes, which he unrolled and counted.—His first impulse was to secure the money and throw the pocket-book away. Was it not his own? He had found it; had not heaven sent it in mercy as a relief to his wants—an answer to his prayers? How much good this money would do. Bread and shelter for his wife and for his little ones, whose cheeks were growing pale with want—whose merry smile was changed to anxious looks of care. Thus he reasoned; but conscience whispered, beware! Suffer not the love of gold to make a plague spot on thy heart! The money is not thine; and this may have been permitted as a trial of thy faith!

But perhaps, he thought, I cannot find the owner—then it will be mine; honestly mine; and with the hope that it might contain no evidence of the ownership, he commenced examining the pocket-book again. Mortal, condemn him not too severely—sit not in hasty judgment on the heart of thy erring brother. Thus tempted, perhaps thine own would have been no better. But the examination left no room for doubt. There was the owner's name, fully inscribed—the name of a rich merchant, with whom in days past, William had been acquainted. What a death-blow was this to his wild hopes! The vision of comforts, which had blessed him for a moment, as if in mockery, was snatched away, and he saw again the miserable hut, the pale wife, and hungry children. Dashing the pocket-book to the ground, he stood for a moment gazing on it.

"Tempter! deceiver!" he exclaimed, "why am I thus worked and tantalized?"

And then, as if a sudden thought had struck him, he picked it up, and stepped into a thicket, which afforded a partial shelter from the storm, and seated himself on a fallen tree.—The elements were in commotion, but there was a fiercer conflict in his bosom. He sat there for more than an hour, the rushing wind and the fallen snow all unheeded; but when he rose up the conflict was passed, and the expression of his face, though sad, was peaceful and resigned.

That night, after the children were in bed, William produced the pocket-book, unrolled the bank notes before his astonished wife, and told her how he had found it half hidden beneath the snow.

"What shall you do with it?" she said.

"What *shall* I do with it?" was the reply.

"Return it to the owner. We can bear toil and poverty, but not the reproaches of a guilty conscience."

"I knew it would be thus. When the darkest temptation was on me, and the evil in my heart seemed ready to triumph, I knew that you would not fail to see clearly and approve the right. The storm is now over, and to-morrow I must carry this money to Mr. Carlton. It is about fifteen miles; I will start early, and perhaps he will give me enough to pay my passage back in the stage."

The next morning, long before sunrise, William was on his way. It was hard walking through the new fallen snow; and the wind was cold and piercing; but he pressed resolutely on, and before noon reached the house of Mr. Carlton. He ascended the marble steps and rang the bell. A servant appeared, and, in answer to the inquiry if Mr. Carlton was at home informed him that the gentleman was out, and that he would not be back till dinner, which would be at two. William cast a glance at his threadbare and rusty garments. He did not wish to enter that house, where splendor and luxury would form a striking contrast to his own comfortless home, but he was cold and weary, and would be glad of a seat anywhere near the fire; so he said to the servant—

"I have important business with Mr. Carlton; and, if you please, I will come in and wait till he returns."

The man eyed him from head to foot; and with a slight sneer on his face, which William did not fail to remark, conducted him into the kitchen. Preparations for dinner had commenced. There was baking, boiling and roasting—such a dinner as would have tempted the appetite of an epicure. However, the two hours passed away. Mr. Carlton at length came in, and William gave a bewildered and timid look around the magnificent apartment; and he shrunk as he caught a full view of himself in a mirror, which extended almost from the ceiling to the floor.

"Have you business with me, sir?" said Mr. Carlton, in an impatient tone.

"Yes sir," said William, producing the pocket-book, and handing it to him, "I found this yesterday, and as it bears your name, I have brought it to you."

"Ah! then you found my pocket-book. I am glad to see it again, which I never expected to do."

He carefully examined it.

"All right," he said, "and I am obliged to you for returning it, for it contains valuable papers;" then carelessly placed it in his pocket.

William had no more to say. He arose, and, with no further evidence of gratitude or obligation, he was suffered to depart.

"I am sorry you did not give the poor man something, father," said a fair girl, as she seated herself on an ottoman at his feet. "Did you notice how pale he looked, and how he almost staggered as he rose to go away?"

"Did he? No, I did not notice it. I would have given him something, if I had thought of it—but he is gone now."

"But, father, you might send it to him.—You know him, do you not? I fear he is very poor."

"Yes, I had some dealings with him years ago. Now I do remember that I heard he had lost his farm."

"How far did he come this cold morning to bring you that pocket book?"

"He lives in B——; he must have come fifteen or twenty miles. I ought to have paid him well for it; and I will not fail to do so yet."

Here the dinner bell interrupted the conversation, and the father and daughter proceeded to the dining room.

While the rich man was enjoying his pleasant repast, William Carter, with a sinking heart and a weary frame, turned his steps towards home. He had not tasted food since early dawn and now full fifteen miles lay before him. He felt disappointed, indignant, grieved at the cold and indifferent manner in which his services had been received. Resolutely putting down, however, the evil thoughts which all this occasioned, he raised a silent prayer for help and resignation, and pressed on his way. It was late when he arrived, and he had scarcely strength to cross the threshhold, and throw himself upon his bed. His overtaxed system had given away, and before morning he was raving in the delirium of a violent fever. Then did his poor wife feel that the hand of the Lord was heavy upon her; but her faith failed not. As she watched day after day by the sufferer's couch, bathing his burning brow and soothing his wild frenzy with her loving voice, she was able to say,—"Though He slay me, yet I will trust Him." Oh, blessed sustaining power of faith and hope—faith not in man, but God—hope not of earth, but Heaven! Cling to thy faith, poor woman—make thy heart strong in confidence; for God will not forsake thee! Even now he is preparing the reward. He will not break the bruised reed, nor crush the humble heart.

Did the rich man rest sweetly, as he lay on a downy pillow? Were there no remorseful thoughts when he remembered the careless act of injustice of which he had been guilty?

It was the fifth day of William Carter's sickness and the physician said that night would be the crisis; if he lived through it he might recover. He had fallen into a lethargic sleep. His pale wife sat holding his hand and gazing anxiously on his sunken features and half-shut eyes. The children, with sad faces and noiseless steps, crept round them. There was a rap at the door; it opened; a gentleman entered. Mrs. Carter looked with surprise upon her unexpected visitor. His dress and bearing, so different from those of her humble neighbors, at another time might have awed her; but that was no place to feel the paltry distinction of human society. In the presence of that Power before which the rich and poor, the mighty and the weak, alike bow, men feel that they are equals—that they are brothers. She arose and offered him a chair. He did not seem to notice her, but advancing to the bed, he gazed long and anxiously on the ashy features of the sufferer, while the tears chased one another down his cheeks; then turning away he threw himself into a chair, and wept with uncontrolled emotion.

This the reader may have guessed was Mr. Carlton. He came into the neighborhood and inquired for William Carter, and had been told of his sickness and its probable cause.—The good woman where he stopped had a warm heart and voluble tongue; and little suspecting who her auditor was, she had given full scope to her eloquence, in denouncing the ungrateful man who suffered her poor neighbor to walk fifteen miles and return without even a dinner.

Mrs. Carter stood gazing in silent astonishment on her visitor; when he arose and placing a heavy purse in her hand, said:

"Take this, and let no expense be spared for your husband's recovery. I will call again."

Before she had time to express her gratitude and surprise he was gone.

The next morning William was better—the crisis had passed—the fever was gone; but he lay weak and helpless as a babe; and but for the many comforts which that purse had procured he might have died. He grew stronger day by day; and, at the end of a week, he was sitting supported by pillows in a large arm chair. Mrs. Carter approached the window and exclaimed:

"There comes the stranger who gave you the purse!"

A minute more and he entered the room.—Approaching William he grasped his hand and said earnestly—

"Thank heaven you are yet alive—that you will live! If you had died, I never could have forgiven myself! I have come to make you some atonement for the injustice of which I was guilty;" and he placed a folded paper in his hand. "There," he continued, "when you are able, read that. Do not thank me—it is no more than justice. The pocket-book was of great importance to me; and it cost you dear."

When the gentleman was gone, William opened the paper, and found it a deed to himself of his old house and farm. There was dancing and shouting among the children; and in the hearts of the father and mother a deep and holy joy, mingled with thankfulness and trust in God.

I need not tell of the happy reinstating in their former home, nor how in better days William Carter often gathered his grand children around his knee, and told them of his bitter trials and temptations, and taught them that they who put their trust in God are never forsaken.

THE QUEEN AND THE QUAKERESS.

In the summer of 1818, her late Majesty, Queen Charlotte, visited Bath, accompanied by the Princess Elizabeth. The waters soon effected such a respite from pain in the royal patient, that she proposed an excursion to a park of some celebrity in the neighborhood, then the estate of a rich widow belonging to the Society of Friends. Notice was given of the Queen's intention, and a message returned that she would be welcome. Our illustrious traveler had, perhaps, never before held any personal intercourse with a member of the persuasion whose votaries never voluntarily paid taxes to "the man George, called King by the rain ones." The lady and gentleman who were to attend the august visitants had but feeble ideas of the reception to be expected—It was supposed that the Quaker would at least say, "*Thy* Majesty," "*Thy* Highness," or "Madame." The royal carriage arrived at the lodge of the park punctually at the appointed hour. No preparations appeared to have been made; no hostess or domestics stood ready to greet the guests. The porter's bell was rung; he stepped forth deliberately with his broad-brimmed bearer on; and unbendingly accosted the lord in waiting with, "What's thy will, friend?"

This was almost unanswerable. "Surely," said the nobleman, "your lady is aware that Her Majesty—— Go to your mistress, and say the Queen is here."

"No, truly," answered the man, "it needeth not; I have no mistress nor lady, but my friend Rachael Mills expected *thine*. Walk in!"

The Queen and the Princess were handed out, and walked up the avenue. At the door of the house stood the plainly-attired Rachael, who, without even a courtesy, but with a cheerful nod, said, "How's thee do, friend? I am glad to see thee and thy daughter. I wish thee well. Rest and refresh thee and thy people before I show thee my grounds."

What could be said to such a person?—Some condescensions were attempted, implying that Her Majesty came not only to view the park, but to testify her esteem for the Society to which Mistress Mills belonged. Cool and unawed, she answered, "Yea, thou art right there. The Friends are well thought of by most folks; but they need not the praise of the world; for the rest, many strangers gratify their curiosity by going over this place, and it is my custom to conduct them myself; therefore I will do the like by thee, friend Charlotte. Moreover, I think well of thee as a faithful wife and mother. Thou hast had thy trials, and so had thy good partner. I wish thy grandchild well through hers." (She alluded to the Princess Charlotte.)

It was so evident that the Friend meant kindly, nay, respectfully, that no offence could be taken. She escorted her guest through her estate. The Princess Elizabeth noticed, in the hen-house, a breed of poultry hitherto unknown to her, and expressed a wish to possess some of these rare fowls, imagining that Mrs. Mills would regard her wish as a law; but the Quakeress merely remarked, with her characteristic erasion, "They are rare, as thou sayest; but if they are to be purchased in this land or in other countries, I know of few women likelier than myself to procure them with ease."

Her Royal Highness more plainly expressed her desire to purchase some of those she now beheld.

"I do not buy and sell," answered Rachael Mills.

"Perhaps you will give me a pair?" persevered the Princess with a conciliating smile.

"Nay, verily," replied Rachael, "I have refused many friends; and that which I denied to my own kinswoman, Martha Ash, it becometh me not to grant to any. We have long had it to say that these birds belonged only to our house; and I can make no exception in thy favor." This is a fact.—*Sharp's London Magazine.*

Wit and Humor.

Mr. Slow's Advice.—"Bimelech," said Mr. Slow, extending his arm like a pump-handle, "you are now old enough to understand the words of wisdom—being eleven and a half, in other words half-past eleven—and I wish to advise you never to interfere with nobody, nor to interfere with nothing that don't belong to you. Shet yourself up, like a gold eagle in your pocket-book, and don't get spent in too much concern for others. If people is inclined to go to ruin, let 'em go if they're a mind to—what business is it of yourn? If neighbors quarrel, what business is it of yourn? Let 'em fight it out. Why should you risk your head in trying to save 'em? When you trade, allers look to your side of the bargain; and leave the one you're trading with to look after his. If he gets bit 'taint your fault. Take keer of number one is Scripter, the real golden rule, and he that acts unto it never can die poor. Never have anything to do with Sympathy. Sympathy doesn't pay—'Taint worth one per cent. But if you must be sympathetic because it is popular, be sure before you begin that it aint agoin' to cost you anything, and then p'raps 'twill do to invest in it. Nobody ever lost anything by not being generous, so lay by for yourself what folks expect you to give to poor people and other rogabonds, and when you are old it will not depart from you. You will have something to count on to make you happy. Pay your doctor's bill, confound a hospital, and buy a gravestone full of exalted virtoos. Be careful, Bimelech; allers look arter the main chance, and beware of sympathy."

Excellent Reparter.—The Rev. Dr. M'C——, minister of Douglas, in Clydesdale, was one day dining in a large party where the Hon. Henry Erskine and some other lawyers were present. A great dish of cresses being presented after dinner, Mr. M'C., who was extravagantly fond of vegetables, helped himself much more largely than any other person, and as he ate with his fingers, with a peculiar voracity of manner, Mr. Erskine was struck with the idea that he resembled Nebuchadnezzar in his state of condemnation. Resolved to give him a hit for the apparent grossness of his taste and manner of eating, the wit addressed him with,

"Dr. M'C., you bring me in mind of the great Nebuchadnezzar."

The company were beginning to titter at the ludicrous allusion, when the Rev. regelable devourer replied;

"Ay, do I mind ye o' Nebuchadnezzar?—That'll be because I'm eating among the brutes."

A convincing Proof.—A person who resided for some time on the coast of Africa, was asked if he thought it possible to civilize the natives.

"As a proof of the possibility of it," said he, "I have known some negroes that thought as little of a *lie* or an *oath* as a European."

A Leading Question.—One of the leading questions said to be asked of a candidate for initiation into the mysteries of the Know-Nothings, is—"Will you do your utmost, on all occasions, to renew and perpetuate the potato rot, in order to keep the Irish out of the country?" The candidate must respond, "I will."

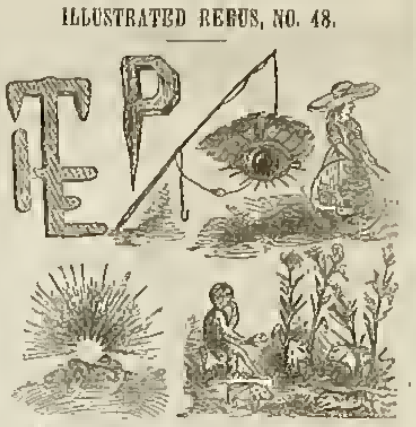
A merchant, being hurried, called upon a waggish neighbor the other day, and asked him if he had a spare clerk to lend him. He was referred to a very thin young gentleman, with a pen behind his ear, as being the sparest one he had!

Chamtaqua Lady.—So your mother is very poor?

Beggar Boy.—She is that! She used to keep a peanut-stand once, but she took a counterfeit one dollar bill and failed.

Youth's Corner.

ILLUSTRATED REBUS, NO. 48.



☞ Answer in two weeks.

(Written for Moore's Rural New-Yorker.)

MISCELLANEOUS ENIGMA.

I am composed of 33 letters.
My 25, 6, 19, 11, 31 is a game at cards.
My 9, 1, 18, 5 is an instrument of music.
My 21, 10, 23, 8, 7 is celerity of motion.
My 22, 20, 7, 23, 11, 7 is actually existing.
My 4, 2, 8, 19, 13, 26 is the power of choice.
My 24, 29, 8, 32, 7 is out of the common course.
My 2, 15, 31, 7, 7, 12 is Irish whiskey.
My 14, 17, 3, 9, 28, 32 is fear.
My 27, 4, 30, 27, 29, 3 is coming together.
My 33, 1, 25, 16 is excitation.
The truth of my whole may be learned by experience.

Rose, N. Y., 1854. e. s.

CHARADE.

My first, by help of needle fine, you cross all o'er and o'er,—
'Tis blue, green, yellow, red, and white, and black, I think, no more;
My second is what all men are, and one alone was not;
What most would have—the fool, the wise, the sober, and the sot;
Yourself, if you're a gentleman, king, beggar, orphan, heir;
My whole is changeful as the wind, it is both here and there,
And ranges all the world, and takes new manners everywhere;
'Tis hot, 'tis cold, 'tis wet, 'tis dry; fish, flesh, fowl, love and treason
Are in it, and are not in it, and so is rhyme and reason.

[*Blackwood's Mag.*

Answer to Illustrated Rebus No. 46.—*The Grand Erie Canal, uniting Lake Erie with tide-water.*

Answer to Miscellaneous Enigma in No. 47.—*The Youth's Corner.*

Answer to Charade in No. 47:

On happiest theme for Grub Street bards;
O little worm, in thee 'tis owing
That beauty walks in silk array,
But 'tis thy skill and splendour showing.
When Thomas takes fair Ann to Church,
And vows he never will forsake her,
Silk-worm for thee is all the gaze,
For thou hast been the mantua-maker.
But if the bride's thine, no bride
Will thou be follow'd to the minister,
For 'tis thy fate to furnish brides,
And be thyself a noted minister.

SHORT-HORNS FOR SALE.

I have several bull calves for sale, (two of them from first premium cows,) and all sired by my first premium Bull Halton (11442.) I can also spare a few heifers, and heifer calves. The prices will range from $200 to $600.

☞ Mr. C. Moore, of Gerry, Chau. Co., is authorized to act as Agent for the Rural New-Yorker, and for the Wool Growers and Stock Register, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$1 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 26 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANTS AND CONTRIBUTORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for 6 months, in advance. For reduction to Agents, and those who form Clubs, see notice on last page.

ADVERTISEMENTS,—If brief and appropriate, will be inserted at 15 cents a line, each insertion. ☞ No Patent Medicine, or deceptive advts, published on any terms.

Rural New-Yorker.

Progress and Improvement.

MORE ARTIFICIAL MANURE HUMBUGS.

MR. MAPES has succeeded so well in palming off on the public his *Improved* Superphosphate of Lime, seeds, plants, &c., by dint of exaggerated statements, and the most unblushing *puffing* in a paper ostensibly devoted to the advancement of scientific agriculture, of which he is editor, that other manure dealers are adopting the same improved method of driving a lucrative business. We judge so, at least, from the receipt of a neat pamphlet of some 60 pages, entitled "Agriculture—its Essentials and Non-essentials; Including an Examination of the properties of Guano and other Manures—by H. N. FRYATT, of Belleville, New Jersey;" and which, on examination, we find to be nothing more nor less than an *elaborate advertisement of Mexican Guano.* We thought such a transparent deception could do no harm, and concluded to take no more notice of it than we do of any other advertisement; for it is impossible to expose one-half the humbugs that are at present palmed off on the credulous portion of the agricultural public,—but being recently in New York, we understood that it was there extensively sold *as a scientific treatise,* and that the dealers in Mexican Guano were secretly making great efforts to get it before the community under this aspect. We also find that a portion of the Agricultural Press give it favorable notice, and urge their readers to purchase and peruse this "excellent little treatise!" We charitably hope that these editors have not read the pamphlet, for we should be sorry to conclude that the conductors of influential Agricultural papers are so profoundly ignorant of the fundamental principals of Scientific and Practical Agriculture as to commend, *after perusal,* so silly and ridiculous a compilation of perverted facts and sophistical arguments.

We do not deem it at all necessary to expose the shallow errors on which the author of this "excellent little treatise" bases his conclusion that the farmers of Great Britain and America, who have for years used both, are sadly mistaken in concluding that Peruvian or ammoniacal guano, obtained from Islands where it seldom or never rains, is *less* valuable than Mexican, African, Saldanha Bay, Patagonian, or other guanos from which the ammonia and other soluble matters have been washed out by heavy rains. As well might he attempt to show that farm yard manure, exposed to the rain and eaves drippings of the barns, is *better* than that carefully preserved in a manure cellar. Are the editors who commend this pamphlet, willing to endorse its fundamental principle, that all fertilizing elements should be presented to plants in an *insoluble* condition? We will not insult our readers by offering proofs that plants can take up their food only in *solution.* Surely, too, these editors are not, at the present day, willing to endorse the assertion that ammonia is *injurious,* rather than beneficial. If they are, we beg leave to commend to their attention the following facts, taken from the results of the Rothamsted experiments on wheat, as published in the *Journal of the Royal Agricultural Society of England.*

In 1844, the unmanured plot gave 16 bushels of wheat per acre. The *mean of nine plots,* dressed with artificial mineral manures, (including superphosphate of lime, phosphate of magnesia, phosphate of potass, silicate of potass,) was 16¾ bushels. The mean of three plots dressed with artificial mineral manure, and 65 lbs. each of sulphate of *ammonia,* was 21 bushels per acre.

In 1845, the unmanured plot gave 23 bushels per acre; a plot dressed with 252 lbs. of *carbonate* of *ammonia* (dissolved) at three times during the spring, gave 27 bushels; a plot top-dressed at *four times* with 168 lbs. each of sulphate and muriate of *ammonia* gave 32 bushels,—while another top-dressed *at once* with 168 lbs. each of sulphate and muriate of *ammonia* gave 33½ bushels per acre.

In 1846, the unmanured plot gave 18 bushels; a plot dressed with 224 lbs. sulphate of *ammonia* 27½ bushels per acre.

In 1847, the unmanured plot gave 17 bushels; a plot dressed with 150 lbs. each of sulphate and muriate of *ammonia,* 26½ bushels per acre.

In 1849, the unmanured plot gave 19¼ bushels; a plot dressed with 200 lbs. each sulphate and muriate of *ammonia* 32½ bushels per acre.

In 1850, the unmanured plot gave 15¾ bushels; a plot dressed with 200 lbs. sulphate and muriate of *ammonia,* 27 bushels.

We might easily bring forward a vast array of similar results, but we think the above is sufficient to convince any candid mind that at least *ammonia* is not *injurious* when properly applied.

"Spent bone-black," the pamphlet says is "useless;" and Mexican guano is of great value, *because it contains a large quantity of phosphate of lime.* Some three years ago Messrs. ELLWANGER & BARRY, of this city, received from New York several barrels of "Spent bone-black," for which they paid a mere nominal price;—we believe the cost of the barrels and cartage,—at which price a considerable quantity could be obtained, *farmers who had been in the habit of carting it away as manure having found little or no benefit from it.* We obtained from Messrs. E. & B. a sample of this bone-black for analysis, and it was found to contain 75 per cent. of *phosphate of lime.* Now, according to the advertisement, the Mexican guano contains, at most, only 60 per cent. of phosphate of lime; why, then, is "Spent bone-black" "useless," and Mexican guano the cheapest of all artificial manures? The phosphate of lime in Spent bone-black is not *more soluble* than in Mexican guano; and according to the pamphlet it is *insolubility,* rather than solubility, that is desirable in artificial manures.

EXTRACTS FROM THAER'S WRITINGS.

IN reading any standard author it has always been our practice—and it is one we would commend to all our young readers—of writing out, in a book kept for the purpose, any notable facts or opinions met with. The labor of writing not only serves to impress them upon the mind, but they soon become useful as reference. The following passages, extracted according to this practice, from "The Principles of Agriculture by ALBERT D. THAER" will not, we hope, prove unacceptable to our readers:

The Science of Agriculture rests on *Experience,* and nothing else should be required or expected from it but that which appertains to a practical science.

Whoever has accomplished one experiment, whatever may be the peculiarity of the circumstances under which it was made, and has given a faithful account of it, has well contributed to the advancement of science, and consequently to useful practice, and has entitled himself to the gratitude of his contemporaries and of posterity. It would surpass the power of any single individual to accomplish any considerable number of these experiments, and it could not even be expected from him. *It is the duty of the Government* to place some well educated men in a position to employ their time and talents in investigating the secrets of nature for the advancement of agriculture and the general good.

Science would have made much greater progress if the false shame with which they conceal every unsuccessful experiment, and the exaggerated manner in which they often relate all those in which they have succeeded, had not retarded its progress.

An experiment is a question addressed to nature. When such a question is properly put nature will necessarily reply either yes or no.

Agriculture ought to borrow from every science the principles which she employs as the foundation of her own: and although the sciences do not form an indispensable part of the farmer's education, he ought, nevertheless, to have a general knowledge of them.

As it is impossible that an occupation like that of agriculture can be exempt from casualities and accidents, a certain tranquility of mind must be united with the necessary activity in order to secure a happy life. Whether this be attained by the consolations of philosophy or religion, the agriculturist must learn to support misfortune with resignation; he must forget all the evils which it was impossible for him to foresee, all those hopes which have ended in disappointment, so soon as he has, by the adoption of prudent regulations, diminished as much as possible, their annoying consequences.

Rural life, despite the pleasures which attend it, and with all its occupations, has so many hours of idleness, that it scarcely satisfies an active mind, that possesses no other object of employment. In choosing an accessory study, the accomplished agriculturist will not find any one more consonant to his feelings than Natural History. He, better than any other person, can abandon himself to the consciousness of living in the bosom of Nature, and investigating her sublime laws; and so far from interrupting his usual occupations by this pursuit, he will almost always be able, pleasingly and usefully to unite them.

Every intelligent farmer will be guided in the choice of land rather by the quality of the soil than by the extent of the property; for the want of fertility can seldom be compensated by an increased number of acres.—There are farms which are absolutely worth nothing, and which, when everything is taken into account never repay the expense of cultivation; and, consequently for the growth of corn, a thousand acres of such land are not worth so much as a single acre of good land.

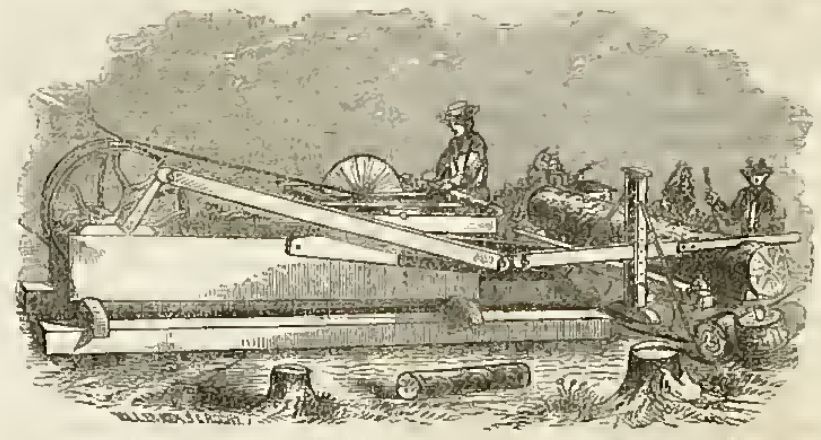
Dung, which is evacuated by cattle on permanent pasture land, is lost for all agricultural purposes; but those farmers who use their fields alternately as pasture and arable land, derive some portion of benefit from it. Even then, however, it is not nearly so profitable as when mixed with the straw or litter in the stable or farm-yard, and properly collected. A great part of that evacuated in the fields is evaporated by the action of the sun and wind, or falls in the dust and is destroyed by insects: but the luxuriant tufts of grass which spring up wherever it falls, and the increased fertility of those parts of enclosed pastures on which the cattle lie down, or where they are milked, tends very satisfactorily to prove that it is not so completely wasted as some persons would have us to believe.

A milch cow ought to be allowed 18 lbs. of straw and hay, for food, per day, during the 190 days of winter, and 2 lbs. of litter—3,800 lbs. per year; and, likewise, a mixture of vegetables or roots per day, or 50 bushels per year. During the 175 days of summer, a pasturage of 3 acres of clover and grass, and 2 lbs. of litter every night, or 350 lbs. per year.

When no description of hay can be obtained for feeding the cows, it is usual to give them all kinds of refuse, independently of the husk of corn and the residue of the grain; and when they are near calving, a mash, composed of meal, bruised corn, oil-cakes, or other matters of a similar nature, are provided, to keep up their strength a little.

Among the ordinary corn-straw, that of wheat is undoubtedly best adapted for fodder; next in value is the straw of oats and barley, which is also, generally speaking, more abundant in leaves; the least nourishing of all is that of full grown rye.

FEED LIBERALLY.—It is generally acknowledged that cattle of any kind, when well fed and looked after, repay much more fully the judicious outlay incurred for their maintenance, than ill-kept animals repay the niggardly expenditure incurred in keeping them alive.—Profit is derived only from the excess above that which is absolutely necessary; the quantity of nourishment which just keeps an animal alive, is to a certain extent lost. This we say is generally acknowledged, but we are sorry to say, not so generally practiced upon.



HALLOCK'S IMPROVED COMBINED CROSS-CUT AND CIRCULAR SAW-MILL.

THE machine represented in the above engraving is a happy combination of two already in use, and presents several advantages readily apparent. It can be moved from place to place without much trouble, and can thus be taken into the woods or elsewhere, and used for sawing stove and railroad wood, stave timber &c., &c., working up the whole tree, with considerable saving in the matter of chips and splitting. It can be run with horse, steam, or water power, and will cut from twenty-five to forty cords per day. One or two horses furnish sufficient power to carry either saw singly with the requisite force and velocity. The machine is manufactured by E. D. HALLOCK, at whose Agricultural Warehouse, (No. 24 Exchange St., Rochester,) it may be obtained. Price of the combined machine $75. The machine with only one cross-cut saw can be sold for $35; with two, (cutting two blocks of stove wood at once,) $50. Cap auger attachment, extra.

COBS OR NO COBS, THAT IS THE QUESTION.

THAT corn cobs contain a considerable amount of nutritive matter cannot be doubted. According to Dr. SALISBURY, 1,000 lbs. of ears of corn contain about 200 lbs. of cobs, and these 200 lbs. of cobs contain of woody fibre 127½ lbs.; of matter separated from the woody fibre by a weak solution of potash, 45½ lbs.; of sugar and extract, 13½ lbs.; of protein compounds, 9½ lbs.; of gum, resin, &c., 4 lbs. The *sugar and extracts and protein compounds* are the principal substances of value. Animals would probably be able to digest and assimilate the greater portion of the fibre soluble in potash water. The large amount of insoluble woody fibre is doubtless of no *nutritive* value. On the whole, we should judge on theoretical grounds that corn cobs are capable of affording to the animal *about as much nutritive matter as the same amount of good wheat straw.*

We do not know whether scientific or practical men first suggested the use of corn cobs as food. We suspect, however, as in most other cases, practice took the initiative, and science *afterwards* shouted "all right, go-a-head." Be this as it may, cobs at the present day are quite extensively used as food, the method of preparing them being simply to grind corn and cob together in the ear. This saves the labor and expense of shelling the corn, and avoids all waste. Some of the best farmers of our acquaintance—men who fatten from fifty to one hundred beeves every year—are in the habit of feeding out all their corn in this way, feeling quite satisfied that this is much more economical than using clear corn meal. On the other hand, there are as equally good and experienced farmers who think the nourishment in the cobs is not worth the money it costs to grind them.

Let us make an estimate. In this city the charge for grinding a bushel of corn ears is four cents; for a bushel of shelled corn five cents. Two bushels of ears, weighing say 80 lbs., are equal to a bushel of shelled corn, weighing 60 lbs., and 20 lbs. of cobs. Say, too, that it costs one cent to shell a bushel of corn. We pay, therefore, for shelling and grinding 60 lbs. of corn, six cents, and for grinding 60 lbs. of corn and 20 lbs. of cobs, eight cents; or, in other words, we pay two cents for grinding 20 lbs. of cobs. We get a *ton* of ground corn cobs, therefore, for *two dollars.* Some will object to our estimate of one cent a bushel for shelling. Leaving the cost of shelling altogether out of the question we still get a ton of ground cobs for three dollars. This year, with hay, straw and all cattle foods exceedingly scarce and high, it will certainly, we think, be more profitable to grind corn in the ear than to shell it before grinding. We should be glad of the experience of our correspondents on this subject.

THE SUCCESS OF THE FARMER.

THE success of the farmer is in proportion to the amount of knowledge he brings to bear upon his profession, and not on the strong hands or capital employed, nor any other exterior advantage. Like most other undertakings, it depends on the *mind* of the man.—The hands are the instruments by which the plow is guided, or a scythe or fork is wielded, and strong ones are necessary for the work; but they are only the *instruments* of the controlling intellect which plans, devises, arranges and controls the whole. Dolts do not make the best farmers, but the men who think are they who will succeed here just as they will anywhere else.

If this be true we can see at a glance where improvement in agriculture is to commence.—The farmer is required to be a thinking man, and he is the *best* farmer who brings the *best trained intellect* to the work—the soundest logic, the best judgment and the purest heart. It is true that men acquire considerable skill in most pursuits by mere repetition of their processes; by habit a farmer may go through the yearly routine of sowing a crop, reaping and harvesting the same, just as his father had done, without ever thinking of the reasons which should decide his course. A certain degree of success will often attend such farming, but let anything new occur to break in upon the habit or routine of things, and our imitator is at his wits' end at the first corner. *Mere instinct* never invented anything new, but it may repeat old processes skillfully.

The farmer is styled the "Lord of the Soil," and certainly the appellation pertains to him, if he has the ability to appreciate the high station. This ability is the result of knowledge. This knowledge, too, enables him to unite science and art, which is necessary to constitute a good farmer. This union must be derived from book learning, which by too many has been considered wholly superfluous and its teachings distasteful. What other art or science is supposed to be attainable in any considerable degree without reading or study? Why should the farmer alone rely on intuition—on instinct for his improvement, and be directed in his employment by habit? Why should he consider himself nothing more than the *head tool* of his implements and but the mainspring of their movements, while the mechanic and the artizan, by their science, seem to infuse intellect into them.

If knowledge be necessary in any occupation, it is pre-eminently so in that of the farmer. The mechanic has no call to investigate the elements which are the *basis* of the material of *his* handicraft. His stock is before him, and his tool, guided by the unerring hand and practiced eye of professional skill, gives form and finish to his work. Not so with the business of the farmer; he may as readily learn

its mechanical parts, but he has problems to solve and mysteries to investigate. He should be familiar with the component parts of the substance on which he bestows his labor—their relative proportions, their affinities, their separate and compound agencies, and the influence of other bodies in their adaptation to the results he is laboring to obtain. In short, he must know the necessary and intimate connection between cause and effect.

I have said that the profession of agriculture requires more study than that of the artisan. If this be true, it is fortunate for the farmer that he can command more time for its acquisition. Winter is comparatively, and to him more peculiarly, a season of leisure. Those who do not possess books on this subject can readily borrow them. But a farmer is the last person who should live by borrowing. Let me recommend a better course. Let an agricultural library be established by an association in the town, consisting of a select number of standard works upon this subject, with the lighter productions and periodicals of the day. General knowledge, independent of mental enjoyment, is important in all occupations—not only as it may direct the hand, but as it calls into exercise other energies conducive to the common good. H. G. EASTMAN.

AGRICULTURAL CIRCULARS.

My attention has been recently directed to a circular, issued by the Board of Agriculture for the State of Massachusetts, containing inquiries on the late drouth, respecting its effect on different crops and on lands variously manured and tilled, together with inquiries on various other subjects of great interest and importance to all people, and particularly so to those who are directly engaged in agricultural pursuits.

Among all the interrogatories, of which there are twenty-three, there are none relating to the increased or diminished fertility of improved or cultivated lands. Why is it that an inquiry on a subject of such magnitude as affecting directly the most important interests of our common country, has not a place among the agricultural statistics of every County and State in the Union? The United States census tables can contain the number of pounds of beeswax produced in a given time, but not the number of acres required to produce 600,000,000 bushels of corn! The Massachusetts Board of Agriculture can issue inquiries on the "extent of the potato disease the present season," but not a word respecting the diminished fertility of the soil in the production of the potato, or the other crops common to our country.

Few facts in agricultural knowledge have come more plainly under my observation than the decrease in the elements of fertility in every State and section of country to which my inquiries and investigations have extended. The gradual, yet constant extinction of the better grasses in the grazing sections of New England, and the increase of not only the least valuable species, but also of such as are worse than none, is now a fact admitted by nearly every dairy farmer therein. Still, there are some who yet wonder why they cannot maintain on the same acres the same or an equal number of cows that their fathers did before them—not regarding the fact that the daisy, June grass and brake are now substituted for the timothy and clover which formerly occupied their pastures and meadows. But this decrease in fertility, and consequently in value, is not confined to the rocky hill-sides of New England or the other grazing sections of our country, as the diminution of cultivated products is constantly and truly informing us.

For example, we will only note the decrease of the following products, in the State of New York, for the period of five years preceding 1850, in round numbers:

Of Potatoes the decrease was	7,000,000 bushels.
Peas and Beans,	1,000,000 "
Flax,	1,900,000 pounds.
Wool,	3,000,000 "
Wheat and Buckwheat	621,000 bushels.
Of Cattle, Swine and Sheep the decrease for the same time, viz., from 1845 to 1850, was over	3,752,000 bushels.

Intelligent wheat producers in the recently settled portions of Illinois and Wisconsin, report that the "inexhaustible soil" of even those sections produces per acre nearly one-half less bushels of wheat now than when new.

If a diminished productiveness to such an extent is not sufficiently alarming to awaken and direct thereto the attention and inquiries of every friend of American interests, then is our appeal in vain. But as an ardent laborer in every cause having for its object the improvement of Agriculture, I will not sorrow as those without hope, but faithfully trust that an awakened attention to this important point will speedily effect for the correction thereof a controlling influence in every agricultural society and publication in our country.—When premiums shall be awarded for the best of effectual methods for increasing or continuing in its present state the fertility of the soil,—when awards of large sums for equestrian exhibitions and accidental productions of a mammoth size shall be directed to purposes of some practical utility and substantial value in the advancement of our agricultural interests, we, as farmers, shall see the dawning of a better day—the glimmerings of a light that shall be unto us the realization of the "good time coming." ONEO.

Tioga co., N. Y., 1851.

IMPURE AIR IN WELLS.

EDS. RURAL:—Having often read accounts of deaths of persons entering wells containing impure air, and having occasion to dig one the past summer, I took the precaution, before any one entered the well, to try a lighted candle. I found on the last morning of digging (the depth being about thirty feet) that the candle would not burn lower than about ten feet. For the purpose of expelling the gas which had accumulated during the night, I first went to drawing the tub, which I used for drawing up dirt, up and down the well as fast as possible, but found no benefit from so doing. I then went to throwing water down, but with like result. I had about given up the idea of doing anything more at my well at present, when the thought struck me that I would try the experiment of letting down fire, never having heard of such a remedy. I accordingly procured a bottle and filled it with light materials, such as chips and shavings, hooked it on to the rope and let it slowly down. After remaining a few minutes I drew it up, tried my candle and found it to burn as bright as on the surface, the foul air being completely eradicated, so that the well could be worked in perfect safety. Whether this remedy has ever been tried by any one else, I do not know. If such remedy would have the desired effect in all cases when tried, it certainly would be valuable information to those digging or cleaning wells.

Harrellus, Nov. 22, 1851. P. D. HOWE.

USE ALL YOUR LAND.

How often do we see men adding acre to acre, for the sake of having a large farm to cultivate, when they have never yet tilled one-half of the land which they possessed in the first place. They have cultivated, perhaps, five or six inches of the surface, and have never made the least use of the eight, ten, perhaps twelve inches which lie immediately below it. A few years ago there was a premium offered in Kentucky for the best ten acres of corn.—The average crop of the competitors was 122 bushels per acre. Now, if that quantity of corn can be produced on an acre, is it not folly for you, intelligent reader, to add more land to that which you already possess, until you have made the latter capable of producing that number of bushels, or as near it as may be? You know very well that you can raise these 122 bushels a great deal more cheaply off of one acre than if you had to cultivate three or four for that purpose. Why then buy more land until you have brought under cultivation what you already have, both surface and subsoil? The latter may not be very productive when you first throw it up, but by proper treatment you can most assuredly make it so, unless it is of a very peculiar character.—*Piedmont Whig.*

A MAGNIFICENT FARM AND FARMER.

A VERMONT paper says:—"Among the conspicuous men in the Vermont legislature is Mr. B. G. Brigham of Fairfield. He owns and cultivates 1,300 acres of land. Among his barn-yard items are two hundred and twenty cows, twenty horses, and five yoke of oxen.—In his dairy he makes butter only. The average yield of butter from the milk of each cow is one hundred and fifty pounds. Two huge dasher churns are set in motion by two horse-powers, and the butter is 'worked' by the old fashioned paddle. His stock of cattle consume about five hundred tons of hay annually; twenty thousand pounds of pork, five hundred bushels of wheat, from four to five hundred bushels of corn, one thousand bushels of oats, and from one to two thousand bushels of potatoes, are among his yearly products. 'The Man of Uz,' in his best estate, could not do better than this. Mr. Brigham himself is got up with a breadth of beam, and in a style of magnificence proportionate to the extent of his possessions and agricultural products; he stands six feet four in his boots, and weighs by one of Fairbank's patent balances, 300 lbs. precisely."

MEANS GRASS.—*(Sorghum Halapense)*—This is a native of Syria, and belongs to the same genus as broom corn. It has recently been introduced to notice in this country by some experiments made in Massachusetts and New York, where its cultivation has been attended with considerable success. It can be cut several times in a season, and is consequently well adapted to soiling.

IMPORTANCE OF DRAINING.—By a recent decree of the French government, 100,000 francs, about $20,000, are devoted to encourage the manufacture of draining tiles for agricultural purposes in the provinces.

Agricultural Miscellany.

OUR MONTHLY JOURNAL.

THE WOOL GROWER AND STOCK REGISTER closes its sixth volume with the issue for December. Since July last, when it was enlarged to 32 octavo pages monthly, and otherwise improved, this journal has rapidly increased in popular favor and circulation—so much so that we have resolved upon still further improvements. In order to make the work what is desired, however, a large outlay is necessary. To meet which the price will hereafter be $1 per annum—or 50 cents a volume, the volumes commencing with January and July. It may be proper to remark in this connection, that the W. G. & S. R. is not, as many suppose, a re-print of the RURAL NEW-YORKER, but almost entirely distinct in both contents and objects. Whenever an article is copied from one paper to the other the type are reset, so that the expense is the same as though the matter were derived from any other source. Hence the expense of publishing each journal is considerably larger than it would be were one a re-print of the other—as is the case with some of our contemporaries.

Our design is to make the W. G. & S. R., continually, a reliable and standard work on all matters pertaining to the breeding, rearing and management of Domestic Animals,—and hence intrinsically valuable to every one engaged or interested in Stock Husbandry. We shall cheerfully forward specimen numbers to all applicants. Both the RURAL and W. G. & S. R. will be furnished one year for $2,50.

WOOL GROWING IN TENNESEE.

THE last General Assembly of Tennessee presented a gold medal to MARK R. CORKILL, Esq., as a testimonial of esteem for his devotion through a long life devoted to the advancement and development of the agricultural resources of that State, especially in wool growing. In replying to the gentleman who presented the medal, Mr. C. says:

"At the World's Fair at London, in 1851, the premium for the golden fleece was awarded to Tennessee. Germany, Spain, Saxony, and Silicia were there; the competition was strong, honorable, and fair. Nature gave me the advantage in climate, but the noble lords and wealthy princes of Europe did not know it, neither did my own countrymen know it until we met in the Crystal Palace of London before a million of spectators. Whilst their flocks were housed six months in the year, to shelter them from the snow of a high latitude, and were fed from the granaries and stock yards, mine were roaming over the green pastures of Tennessee, warmed by the genial influence of a southern sun—the fleece thus softened and rendered oily by the warmth and green food, producing a fine, even fibre."

TO MAKE HENS LAY PERPETUALLY.—Keep no roosters; give the hens fresh meat, chopped up like sausage meat, once a day—a very small portion, say half an ounce a day, to each hen—in winter, or from the time insects disappear in the fall till they appear again in the spring. Never allow any eggs to remain in the nest for what are called nest eggs. When the roosters do not run with the hens, and no nest eggs left are in the nest, the hens will not cease laying after the production of twelve or fifteen eggs, as they always do when roosters and nest eggs are allowed, but continue laying perpetually. If the above plan were generally adopted, eggs would be as plentiful in winter as in summer. One reason why hens do not lay in winter as freely as in summer is the want of animal food, which they get in summer in abundance in the form of insects.—*English Paper.*

We think that to fulfil the requirements of the above, article fowls in this climate would require some protection, more than roosting in the apple trees and open sheds, and exposed situations; and in addition to animal food, which is indispensable (and there is none better than lard mixed with Indian meal) they must have gravel and lime, *ad libitum*.—EDS.

PLOWING IN GUANO.—A correspondent of the *Country Gentleman*, in reply to an inquiry as to the best method of applying guano on clay land, says:

I have tried it on clay land that had been in grass for five years. On one half the field I plowed it in to the depth of about seven inches, and on the other half harrowed it in, and planted it all to corn, and staked off an equal number of hills from each part. It all came up equally well, but by the early part of summer there was a marked difference in the two parts of the field, which continued throughout the season; and upon husking, that which had been plowed in (and staked off upon planting,) produced nine bushels, while that which had been harrowed in, produced but five bushels, showing the advantage of plowing it in, even in heavy clay soil. The soil was a slate, and the amount used about two hundred lbs. to the acre.

WHEN SPRING COMES every good farmer will have a plot or field or garden, where he can *profitably* apply all the manure he can save or make during the winter. Every shovelful of manure judiciously applied will increase the amount of his harvest. *Now is the time to think of this, and make arrangements and preparations, and act accordingly*

VARIOUS MODES OF CURING HAMS.

The matter of curing being one of the most interesting points in connection with the management and general economy of swine, it will probably be of some interest and value to the reader, if we give a few of the most careful and successful processes of performing the operation in different sections of the country.

Massachusetts raises and cures pork on a small scale only, but it is generally of a character not surpassed in richness, flavor and delicacy, whether pickled or smoked. In curing bacon and hams, a superior method is to put two quarts of butter-salt into an iron kettle, place it over a slow fire, stirring it occasionally, so that it will not bake, and, while the salt is dissolving, the ham is placed on a bench near the fire, and a tea-spoonful of saltpetre rubbed smoothly with the hand on the flesh-side of the ham, which soon dissolves and disappears.—The hot salt is then taken from the kettle, a table-spoonful rubbed on the ham by the hand, the operation continuing until the ham sweats, which indicates that the salt has penetrated through the ham. This quantity of saltpetre is for a ham of twenty pounds, which may be cured in ten minutes, the operation commencing before the animal heat is entirely out, and it is fit for the smoke-house, where it will be ready for use in ten days, or it may remain with perfect safety for a year, or longer, before being used.

Curing hams in New York State is frequently done in the following manner,—the quantity being one hundred pounds: Take four and a half pounds ground rock salt, four ounces saltpetre, and four pounds brown sugar; mix the salt and saltpetre, and with it thoroughly rub each ham all over, powdering it with the mixture, and pack down in a tight, clean cask, sprinkling over each layer its due proportion of sugar; head the cask tightly, and after four days commence rolling it briskly back and forth, so that the surface of each ham may be wet with the brine spontaneously produced, the rolling to be repeated three times a day, until the brine is all absorbed, when the meat is ready for the smoke-house.

In Virginia, the hams of young, thrifty, fat hogs, weighing from 100 to 175 pounds each, were taken, cut, rounded, the under surface of each sprinkled with a spoonful of powdered saltpetre, and then covered thickly with a mixture of Liverpool salt two-thirds, and ground alum one-third, then packed in boxes, the leg inclined downwards, for the salt to penetrate. They remain in the salt four or five weeks, are then hung in the smoke-house, sometimes rubbing them previously with hickory ashes, and are smoked every day with chips of oak, hickory, &c., the fire being smothered so as to get all the smoke and but little heat. Early in March, or before the fly comes to deposit its eggs, the hams are taken down, and each one covered on the flesh or inside part thickly with dry, weak ashes. They are then taken separately, and placed on shelves to keep dry, each by itself. Good salting, (using saltpetre,) good smoking, and dry keeping, are considered indispensable.—*Boston Traveller.*

HALF ROTTED HAY.

We suppose every farmer has observed how much more greedily cattle will eat corn husks and stalks that are partially rotted and mouldy, than they will those that are sound and bright. S. W. Johnson, in a recent letter to the Country Gentleman, gives the following account of the mode of managing or curing hay on the Alps, by which it seems they reduce their hay to a similar state with the husks above named.

The hay, he says, is cut here several times during the summer, as I saw it being mowed in many fields where its height was not more than three or four inches. Owing to this frequent cutting, and the abundant rains that fall in the highlands, the grass is very fine and thick-set, and of an intense color. On account of the variability of the weather, a peculiar method of curing hay is practised. One observes numerous little log barns, fifteen by twenty feet square, and ten feet high, scattered over the lower Alps. Into these shanties the hay is thrown while half dry and thoroughly trodden down. It shortly ferments, and the hay becomes dark brown in color, and forms quite a solid mass, which may be cut with a spade. Prof. Fraas, of the Munich University, says, in his "Principles of Agriculture," that this so called "brown hay" is as good as the ordinary hay; it is, in fact, preferred by cattle, and appears to be more nourishing.—*Maine Farmer.*

LEAVES AS A MANURE.—The *Boston Cultivator* says;—Leaves are valuable as manure and as bedding for animals. They answer as good a purpose for litter as straw, and this is worth here $15 a ton. We do not mean to say that leaves will last as long, but while they do last they are as good. Vast quantities might be collected at little expense. A farmer in this vicinity keeps several men and a team employed for several days every year, after the fruit and forest trees have shed their foliage, gathering and storing leaves. They are used as litter for horses, cattle and swine. He says the manure that is mixed with leaves is so much better than that mixed with straw, that the difference can be perceived in crops to which it is applied.

COMPOST.—At every leisure opportunity, collect materials for the compost heap. It is almost incredible what an amount of fertilizing matter may be accumulated in one season, by the exercise of a little industry. All the waste matters about the barn and dwelling house,—the bones, refuse straw, weeds, scraps of old leather, cloth, bristles, horns and hoofs of cattle, &c., &c., should be carefully saved up, and placed in the compost heap. Loam, muck, the scrapings of the door-yard,—which every true farmer desires to see neat and unincumbered—should also be added. "Economy is wealth," says the old adage, and in no department of industry is it more essential and indispensable than that of farming.—*Ger. Tel*

Inquiries and Answers.

GYPSUM ON WHEAT AND TIMOTHY GRASS.—Will some of your experienced farmers please inform a young farmer what effect plaster has on wheat, barley and oats, and on timothy and other cereal grasses? I can get plaster for $4 per ton. Will it pay to use it at that price on the crops named? How much should I sow per acre? I found last year great benefit from it on clover and Indian corn.

A YOUNG BEGINNER.

POLAND OATS.—I am informed that Poland oats are grown to a considerable extent in Western New York. Will some of the numerous readers of the RURAL who have grown them be kind enough to inform an inquiring Wolverine whether they are as valuable as cracked up to be? There are said to be two kinds,—if so, which is the best? WM. DEERE.

Calhoun Co., Mich., Nov. 25, 1851.

FOUL IN THE FEET.

EDS. RURAL:—Noticing an inquiry through the RURAL of the 11th, as to what would cure the cough in calves, and the foals in cattle, I would state that I never had calves troubled with the cough, but last spring I had several cows, as also did my neighbors, affected with the foul, which consists in the hoof swelling out nearly to the knee, causing the cows so much pain that they can scarcely walk, and also making their milk bloody. I found on examination that the hoofs were rotting, in between them, and they looked as if they would split apart. I tried several remedies proposed by one and another, but they did no good. At last I took a half-inch rope and drew through between the hoofs until I cut away all of the rotten flesh, and made it bleed pretty freely.—I then turned up the hoof and poured in spirits of turpentine, until it was wet all over; then sprinkled in pounded blue vitriol freely. Two applications effected a cure for those troubled the worst. S. B. NEWELL.

Stanfordville, N. Y., Nov., 1851.

In answer to the same inquiry Mr. J. P. YOULEN, of West Rupert, Vt., writes:

FOUL in cattle is caused by the dirt getting in between the claws, and causing an inflammation of the frog of the foot, and is readily cured with the same medicine used for sheep.—Cleanse the dirt out of the hoof; then take one half pound gum powder, one-half pound alum, one gill of the oil of blue vitriol to one gill of water; burn the alum and pulverize it; then put the ingredients together in a glass or stone vessel, (it will destroy any other kind, such as iron, brass, or copper,) and then it will be fit for use. Apply the medicine to the parts affected once or twice, and your cattle are cured of the foul. P. YOULEN.

BOARD FENCE.—The following statement may furnish in part a reply to B. G. S.:—Twenty years ago this month, I built about 15 rods of board fence in front of my yard and garden in the following manner:—The posts were chestnut saplings, from 5 to 8 inches in diameter, and but 7 feet long, and prepared the winter previous, by peeling and flattening on one side 4½ feet of the butt end. They were then laid up in a condition to season through the summer. The posts were set 2½ feet in the ground *top end down*; the dirt was put in and pounded hard, inch by inch, from the bottom to the top of the hole. The four boards were 16 feet long and 12, and 7, and 7 and 6 inches wide, with a cap on top 6 inches wide, taking care to break joints alternately on the posts.—I then plowed and banked up on the outside, and raised the ground on the inside for border beds and shrubbery. The fence still stands, answering all the purposes for which it was made and has not had the amount of one ½ lb. of nails nor ½ an hour's time expended on it since first set.—J. S. B., *Castile, Wyoming Co., N. Y.*

TEXAS CATTLE.—Several lot of Texas cattle have been sold in this market during the summer and fall. On Friday, a small lot from Holland county, Texas, sold for $15 a head. They were driven nearly or quite 500 miles, and it might be a matter of astonishment how they could be sold at so small a price. The thing is explained when we say that they subsisted all the way on grass, and kept in tolerable order; they never had an ear of corn in their lives. An attempt was made to feed them with corn and provender at the stock yards, but they ran away from it. Texas cattle are about the nearest to wild animals of any now driven to market. We have seen some buffaloes that were more civilized.—*St. Louis Intelligencer.*

CATTLE MARKET.—The largest market ever known was held at Smithfield, on Monday.—From the returns furnished, it appears that the beasts were 5,668 in number, and the sheep 46,950. The supply, even at the "Grand, Christmas Show," has never been so large.—Besides these, there was a large number of calves and pigs. At a very moderate calculation, the value of the animals offered for sale would amount to a quarter of a million sterling.—*English Paper.*

TIMOTHY scarcely ever fails, on a well-drained bog, with a properly prepared surface.

Orchard and Garden.

WORMS ON QUINCE TREES.

I HEARD various accounts of the disease now threatening the entire destruction of the quince tree, but they so conflict with each other, that they are entirely unsatisfactory. There is one matter, however, upon which they all agree, that it is the work of an insect or worm.

The practice of grafting pears on quince stocks has become so common, that it is important to know whether the stump on which the graft grows will in time be subject to this affection; if so, to endeavor to find a preventive.

Many persons are in the habit of examining their quince trees twice a year, April and October, and if they succeed in finding the worm in April, it has been eating the tree all winter, and done all the harm it can; and if in October, it has bored so far into the trees as to render it almost impossible to get at it without cutting away large portions of the tree, and when accomplished seems "like locking the door after the horse is stolen."

I have some trees which a few years ago bore smooth, large and round fruit. Three or four years ago they became unhealthy and gradually declining, the limbs and fruit became knotty, the latter entirely worthless, the trunk bored full of holes, almost destroying vitality.

Determined if possible to stay their depredations, in the month of May of last year I carefully removed the earth from the trunk of the trees, together with the loose bark and decayed wood, that I might have this portion of the tree smooth, and thus be enabled to discover at once any change that might occur.—In the fore part of June the wasps, hornets and blow-flies collected on spots over the tree nearest to the ground, and on the most healthy parts, and from which there was a slight discharge of moisture, that they fed on upward, and appeared to be very fond of, as they could not be driven away, and must have appropriated much to their use that should have been given to fruit. The discharge gradually increased until the tenth of July, when it became dry, and instead of sap a substance resembling sawdust was exuded. Upon examination I found just beneath the bark, in all the parts affected, from one to four worms of the order Lepedoptera, with black heads, from half an inch to an inch in length. The bark over them had not been eaten; they prey exclusively on the wood.

The trees from which they were destroyed last year, exhibit no marks of the worm having wintered with them through last winter, but they have been again pierced, and within a few days I have taken many worms; but find the health of the trees much improved, and am satisfied that destroying these worms every summer will entirely restore the health of the trees and quality of the fruit. The latter part of July and fore part of August is the proper time to destroy them.

In addition to what is said above, it should be remembered that the pear on quince stock may be secured entirely against the quince borer by burying the quince stock in planting below the surface. The borer works only at the surface. The quince is not so readily injured by deep planting as other trees, and sends out lateral fibres on all sides.—*Soil of the South.*

CALIFORNIA FIG TREES.

WHEN our citizens purchase figs in our market, they have but little conception of the size of the trees that have yielded the delicious fruit they are now tasting.

We have written this communication beneath the magnificent fig trees in the fruit garden of E. L. Beard, Esq., of San Jose. We have just measured two of a group of ten fig trees, the least of which measures 2½ feet in circumference. The trees of the group are forty feet high, and the largest measures 5½ feet in circumference; the limbs eleven feet from the ground measure 2 feet two inches in girth; limbs four feet from the ground 3 and 3½ feet in circumference. The leaves upon the trees measure 18 inches across. This may seem incredible, yet, these are facts. The fruit is now just ripening, and one specimen before us measures eight inches in circumference. Such fruit can be easily raised, and will be by those who make California their "home." The fruit gardens of Mr. Beard now present a cheerful sight. Pear trees are bending beneath the weight of their fruit, which hangs in *ropes* and clusters, causing the entire trees to assume the appearance of weeping trees.—There are no grounds in the State that present a finer appearance than those we name; young orchards of acres, numbering thousands and tens of thousands of trees, are coming into bearing, giving promise of future abundance.—Surely such effort on the part of our cultivator, deserves a corresponding reward.—*California Farmer.*

PROFITS OF PEAR GROWING IN ENGLAND.

PEAR growing, it will be seen from the following extract, cannot be an unprofitable culture in England, with all the defects of climate. If we were to go into some details in this way, says the *Horticulturist*, in regard to profits of Pear trees here, we might make some statements that would surprise people:

An observation of M. de Jonghe, in one of your late numbers, to the effect that England, from mismanagement, is tributary to Belgium, for pears, induces me to remark the high price at which the fruit is retailed in Covent Garden. I have seldom been able to purchase first-rate winter-fruit, such as Winter Nelis, Beurre Rance, Easter Beurre, or Ne plus Meuris, under 6d. apiece, and never under 4d. Now let us suppose an acre stocked with pyramidal trees, at six feet apart, there is room for 1210. In good condition, they surely ought to produce two dozen pears each; but let us suppose that every other tree is absolutely barren every alternate year; the average will then be a dozen fruit per tree. Let us now assume that even of this dozen one-half is cracked, pecked, rotten, or otherwise unsaleable; there will remain half a dozen in good condition. Let us halve these again, and suppose that only three can be retailed at the full price of 6d., and that the other three will only produce 4d. each. We have thus 2s. 6d. per tree, or £152 per acre. What the retailer's profit is I know not, but assuming him to be content with 52 per cent., he will pay the grower £100. Now £100 an acre seems an enormous return, even after allowing that the tree, at 1s. 6d. each, must have originally cost £90, and that annual expenses, such as rent, taxes, and labor, have to be deducted. Hence we may conclude, either that pear growers are driving a most lucrative trade, or else that amateurs must not, on an average of years, expect a return from their pyramidal trees of even six good fruit from each. The culture of standards is usually considered more profitable than pyramids. If so, market gardeners, who almost always plant standards, will actually realize larger profits than those I have indicated above.—S. B., *Bromley, in Gard. Chron.*

THE STRAWBERRY.—There are many varieties of this fruit. The common, native strawberry, however, is that to which I desire to invoke attention in this article. I have seen it grown in gardens of a size equal to the largest of the best foreign and improved varieties, and of a flavor superior to either. All that is necessary in the cultivation of it, is to take up the plants in August, or September, and set them in beds of well prepared earth, in rows twenty inches apart, and from eight to ten inches in the rows. The next spring they will send forth runners, which should mostly be taken off as fast as they appear, and the soil filled with old compost. The second season after setting, they will be in full bearing, and the ground between the rows should then be covered with straw, to prevent the fruit coming in contact with the dirt. Frequent irrigation with soap suds, will be necessary from the time they commence blossoming, till they begin to fruit.—*Germantown Telegraph.*

GOOD GARDENING.—One of our fellow citizens who owns and cultivates half an acre of land, says that he has raised from it all the vegetables he shall want for his family use, and now has a surplus worth from thirty to forty dollars to dispose of. Besides, he already raises about fifty varieties of fruit, and says that in five years he will produce one hundred varieties of fruit from this half acre. This man cultivates his land intelligently, and, consequently, to some purpose.—*Bangor Whig.*

THE DIELYTRA SPECTABILIS.

THE *Dielytra Spectabilis* was sent to England from China, about ten years ago by Mr. FORTUNE, the collector of the London Horticultural Society, and since that time has bloomed among the finest European collections, eliciting unqualified praise, wherever introduced. At first its cultivation was confined to the conservatory and green-house, but recently it has been found well adapted to out-door culture, and there has developed its native luxuriance and beauty, beyond all expectation. It is thus spoken of by the *Horticulturist:*

"What adds immensely to its value is its entire adaptation to either house or garden culture, and that it requires only the simplest treatment, out doors or in, to ensure perfect success. It is a plant for the million. In the garden it is as easily grown as a common Paeony, requiring no more than a good deep and rich soil—the richer the better. It is also one of the easiest plants to multiply—just as easy as a Dahlia. We propagate it exactly in the same way, viz., by cuttings of the young shoots, taken off in spring, and placed on a gentle bottom heat. Plants struck thus, and bedded out as are Verbenas, Petunias, &c., will bloom finely a long time toward the latter part of the season; and by these succeeding the plants that are allowed to remain in the ground, it may be had in blossom nearly all summer. It can also be very easily increased by taking up the plants and dividing the roots in spring, before it commences to grow. We feel confident that it will make an excellent window or parlor plant. A large plant put into a pot or box in October, and kept dry the early part of winter in a cool room, where the temperature will be about 40°, or just above freezing, and then brought into a temperate heat about the middle of February or first of March, will soon be a beautiful object.

The annexed wood-cut is given to illustrate in some degree its habit of growth. We remember seeing in an English journal an account of a plant that measured upwards of thirty feet in circumference and five feet high, with upwards of two hundred spikes of blossoms at once. The shoots are succulent, almost transparent, and attain the height of two to three feet. The leaves are somewhat like those of the Paeony in form, and the flowers are produced on the young shoots in heading racemes, each having from ten to twenty flowers. These are a brilliant rose color, and in form resemble somewhat a small fancy work bag. The corolla consists of four petals; the two large ones, forming the most showy part of the flower, are compressed and turned backwards at the point, and the two small ones, which project below the others, adhere to each other, and cover the stamens. These latter are whitish. On close examination, the flowers are no less curious and wonderful than they are beautiful."

Mr. FORTUNE described it as one of the most popular plants in China. It belongs to the natural order Fumeriee—Fumeworts of LINDLEY'S "*Vegetable Kingdom*"—and, as a French writer truly says, is the queen of them all. It has been variously called *Dicentra, Dielytra,* and *Didytra.* In England and in this country it is almost universally written *Dielytra.*

Domestic Economy.

RECIPE FOR WASHING.—Put two tablespoonfuls of spirits of turpentine to one of soft soap, and use the same as common soap. It will reduce the labor one-third and the soap will go further. It has been tested here to the satisfaction of those who have tried it. J. S. F.

A GOOD PLAIN CURRY.—Cut up undone or fresh veal, rabbit, or fowl—if the latter, take off the the skin. Roll each piece in a mixture of a large spoonful of flour and half an ounce of curry powder. Slice two or three onions, and fry them in butter, of a light brown.—Then add the meat, and fry all together till the meat begins to brown. Put all into a stew-pan, pour in boiling water enough to cover, and simmer very gently for two or three hours. A little broth is used instead of water, for cooked meat. Serve with plain boiled rice.

APPLE JELLY.—Wash and cut the apples in two or three pieces, to see if there be any worms in them; put them in a bright brass or porcelain lined kettle, and cook until the apples are done; take out and strain the juice from them, and put them on the stove again, and boil until they begin to look dark; then add one-third as much sugar, by weight, and boil until they become a jelly; put into cups or tumblers, and tie paper over the tops.—This is excellent for making jelly cakes. Try it.—*Ohio Cultivator.*

EGGS, CONVENT FASHION.—Boil four eggs for ten minutes, put them in cold water, peel and slice thin one onion, put into a frying pan one ounce of butter; when melted, add the onion, and fry white; then add a teaspoonful of flour, mix it well, add about half a pint of milk, till forming a nice white sauce, half a teaspoonful of salt, and a quarter ditto of pepper; when nicely done, add the eggs cut into six pieces each, crossways, toss them up—and when hot through, serve on toast.

DOMESTIC economy is a Science—a theory of life, which all sensible women ought to study, and practice. None of our excellent girls are fit to be married, until they are thoroughly educated in the deep, and profound mysteries of the kitchen. See to it, all ye who are mothers, that your daughters are all "accomplished" by an experimental knowledge of good house-keeping.—*Ohio Farmer.*

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office, For the week ending Dec. 26, 1854.

Alden Adam, Jerseyville, Illinois, improvement in hay and cotton presses.

Gottlieb Bucksein, Philadelphia, improved arrangement of devices for applying power to fire engines.

Asa Cram, Boston, improvement in the hood stand, or cloth's horse.

A. B. Crawford, Wooster, O., improvement in clover hullers.

Augustus Eliners, Boston, improvement in seats for public buildings.

Fletcher Felter, Perth Amboy, improvement in feathering paddle wheels.

C. B. Gallagher, San Francisco, improvement in converting reciprocating into rotary motion.

Elias A. Hibbard, Winchester, Va., rotary cooking stove.

Jos. Holton, White Township, Pa., improvement in knitting machines.

Whirlon E. Kidd, New York, improvement in moulds for pressing bonnet fronts.

Daniel B. Martin, Washington, N. J., improvement in steam boilers.

Angus W. McDonald, New Creek Depot, Va., improvements in tanks and cisterns for supplying locomotives.

Jordan L. Mott, of Mott Haven, N. Y., improvement in stoves.

James Newman, of Birmingham, England, improvement in making metal rods and tubes. Dated November 28, 1854. Patented in England March 23, 1854.

A. D. Perry, Newark, improvement in breech-loading firearms.

E. K. Root, Hartford, improved machine for boring chambers in the cylinders of firearms.

Daniel B. Shibley, of Boston, improved pianoforte action.

Nathaniel Spooner, New York, improvement in moulds for pressing bonnet frames. Dated November 28, 1854. Ante-dated Nov. 10, 1854.

Wm. Talbot, Sandford, Me., improvements in looms for weaving bags.

Wm. Tinsley, Glenn's Falls, improved matress box.

Edward B. Tracy, New York, inclined sliding valves.

George Tugnot, New York, improved rotary lathe.

Daniel Van Fleet, Sandusky City, planing machine.

Wm. Wakely, Homer, improvement in metal drills.

Theodore B. Weed, Williamsburgh, improvement in sewing machines.

Wm. Wheeler, Acton, Mass., improvement in washing machines.

Henry Richards and Charles F. Wilson, Boston, improvement in windlasses.

Osgood G. Baynton, Haverhill, assignor to Nehemiah Hunt, of same place—improvement in binding guides for sewing machines. Dated November 28, 1854; ante-dated June 1, 1854.

Thomas J. W. Robertson, New York, assignor to himself and Alfred E. Beach, of same place—improvement in sewing machines.

Arad Woodworth, 3d, of Boston, and Geo. Chamberlin, of Olean—improvement in machinery for making rope and cordage.

IMPROVED GAS CHANDELIERS.

MANY attempts have been made to improve the general character and design of gas chandeliers, by rendering them more ornamental and artistic, while, at the same time, their usefulness should not be impaired. They have been made to assume various shapes, but still there was wanting in many of them a tasteful elegance appropriate to the purposes of which they are intended. One of the most artistic efforts in this branch of manufacture is now on view at Mr. Odell's ironmongery establishment, Bold-street, London. The chandelier is suspended by twisted cords, executed in bronze, and through these cords the pipes are ingeniously introduced. At the base is a figure of Hercules, armed with his darts, in the act of slaying the Lernæan, or many-headed hydra, which are represented by the branches of the chandelier. The effect of the figures is appropriately relieved by spreading leaves of burnished gold, introduced in various parts of the design. The chandelier is of artistic bronze, and combines a degree of classic elegance and novelty of design of which an article of this kind could scarcely be considered susceptible. Two other chandeliers, wrought in antique bronze, complete the set. These are also beautifully finished to correspond with the principal.

WATER FILTERS.—O. Sunley has made the following improvement in filters, for which he has taken measures to secure a patent. A suitable cylindrical vessel is divided into two filtering parts, one of which contains charcoal dust and the other clean sand, &c., for purifying the water. The water is admitted at the bottom of the vessel, and flows upwards and over the top, and fills pure and limpid in a reservoir. The impure and foreign substances can in this manner be washed out at the bottom in a concentrated state, with a very little water, thus affording an easy means of keeping the filter in a proper condition for purifying the water.—*Scientific American.*

CARVING MACHINE.—An improvement in pantograph carving machines has been invented by E. Allen, of So. Windham, Ct., the nature of which consists in the combination of two pantographs in such manner, that a tracer and cutting stool applied thereto may be capable of moving, not only every point in a plane, as in a single pantograph, but also perpendicularly to the plane, for the purpose of tracing over an undulating surface, and cutting a corresponding one. By this combination, statues, bas-reliefs, and ornamental combinations of an extremely complicated character, may be carved to pattern with great accuracy. Measures have been taken to secure a patent.

THE *London Times and Gazette* announces that the lecturers at the Charing-cross Hospital school have sent to a candidate for the honor of becoming a colleague an intimation that he could not be received until he had sacrificed a favorite moustache.

HOME-MADE FURNITURE.

In the present pecuniary troubles, many a wife finds an unusual necessity for practising the strictest economy in household matters.—Perhaps house-keeping is just to be commenced, and the great problem is, how much furniture and how many conveniences can we afford to procure. A little money must go as far as possible. Such would perhaps like to be initiated into the art of making cheap articles of furniture, both useful and ornamental. Many a neat and comfortable sofa or lounge, chair, stand, bed, book-shelves, &c., &c., have we seen, that cost its owners almost nothing.

A few boards, a little stuffing, and a few yards of shilling calico, put together with ingenuity, will give a tasteful and even elegant air to an otherwise bare and comfortless room. Most of the work we shall describe can be done by the females of the household, and we are sure will afford them more pleasure and comfort than the so-called "ornamental" worsted-work, bed-quilt piecing, &c. And in almost every family there is enough mechanical ingenuity among the boys, if not among the girls, to do the sawing and nailing.

A simple *Lounge* can be made by taking a broad, thick plank, strengthening it by nailing on cross pieces underneath and inserting four short legs; add a cushion filled with any material you wish, and add a valance of the same to conceal the legs. A back and either one or two ends may be added, if desired, by nailing on boards and cushioning them like the seat.

A *Cot Bedstead* many of you know how to make. Take four sticks about four feet long and three inches square, bore an inch hole through the middle of each, and put a round stick, six feet long, through, and pins through the ends; arrange these like the four legs of a saw horse, then to form the sides, connect the head and foot posts by nailing a rod or strip of board on to their tops; take a piece of bagging 6 feet by 4, stretch it across and nail it firmly on to the side pieces. To strengthen this, make a narrow head board, nail on a small rod at each end, and bore holes in the side-pieces to receive them. By lifting this head-board out, the bedstead can at any time be folded together and laid aside, if not wanted.

A convenient *Seat* for children, or for the garden, is made like the cot bedstead, with the head-board omitted. The sticks for the seat should be one foot long, those for the legs, one foot six inches long. Bind a bit of carpeting for the seat. These are so light, and so easily folded and carried about with one hand, as to be very convenient.

Hanging Book Shelves are another article of furniture easily made, and very convenient. For a small size, take three planed boards one-fourth of an inch thick, let the largest shelf be about 30 inches long by 8 wide, the others each one inch narrower and two inches shorter than the one below it. If convenient, paint, or oil and varnish them. Bore a gimlet hole in each of the four corners, take a stout cord and pass it down through one hole in each shelf, taking care that it is at the same corner of each, then pass it up through the remaining holes in the same end, making a knot in the cord under each shelf for it to rest upon. Pass a cord through the other end in the same manner, and tie the four ends of the cord together a foot and a half above the upper shelf, and hang it up.—*Ohio Cultivator.*

THE MINIE RIFLE.

A CORRESPONDENT of the London Times writes as follows relative to the effectiveness of this rifle:

The immense superiority of the Minie rifle and bullet, not only over the common musket but even over the common rifle, was incontestibly proved at Alma. Many of our fellows were slightly wounded, but none of the Russians were so. The Minie ball makes no slight wound. The effect on the Russians, judging from their dead, seemed awful. When it struck, it tore all before it. Some of their wounded told us that men were wounded by Minie bullets, after they had passed through the bodies of their comrades. The immense majority of the enemy were wounded through the head, generally struck about the throat or under the chin, for the men fired upward as they ascended the hill. The common musket ball at such a range would have done no great damage, but here the balls had come out through the top of the skull, rending the bone as is done by a hatchet.

MACHINE FOR FILING SAWS.—The filing of saws by machinery in an accurate manner, and to operate equally well on saws of different sizes, is a matter of no small importance. Various machines have been invented to accomplish this object, and some have been illustrated and noticed in our columns. An improvement on those heretofore used has been made by C. W. Buck, of Norway, Me., which consists in having a cross bar in the file frame to which adjustable holders are attached, and which, by being moved laterally, (the bar) through slots in the frame which holds the saw, the teeth of the saw are filed with great exactness. Mr. Buck has taken measures to secure a patent for his improvement.

MORTISING MACHINE.—R. P. Benton, of Rochester, N. Y., has taken measures to secure a patent for an improvement in the feeding of the stuff into mortising machines, whereby mortises may be cut in stuff the required length and depth by self-acting devices, which receive motion from the shaft of the cutter.—There is a rotary screw rod operating upon a slide, and an adjustable crank which gives a reciprocating motion to the bed on which the stuff is fed in, the latter being so adjusted that the cutter will operate upon the stuff to cut the required depth and length of mortise and no more. This mortising machine may be attended by a boy; in practice it has operated well.—*Scientific American.*

Educational.

EVENING SCHOOLS.

The school system of most of our Northern States is ample for the general education of the people, and is provided at a cost quite within the means of the humblest and poorest citizen, provided he can find time to attend the schools. We venture to say there is not a young man to be found in New England or New York, who has been really anxious to obtain a liberal education, and possessed sufficient courage and nerve to pursue a favorite object with steadiness and undertaking energy but that has accomplished the undertaking—It is only necessary to fix the aim at any desired point, and then never stop short of it. The actual expense of the school is not the great obstacle in the way of persons who have arrived at man's estate destitute of an education. It is the want of time, the cessation from labor, the stopping of wages, and the consequent cutting off of supplies, which hinder many a young man, and indeed many a middle-aged man, from acquiring at least the rudiments of an education.

There are hundreds, especially in cities,—a large portion of them foreigners by birth, new comers to our shores and to the precious advantages afforded by our schools,—who can neither write nor read, but who are sincerely anxious to do so. Their children can attend the public schools,—at least those not old enough to work,—while the parents themselves, and the older children, are compelled to labor for a living. Unless, therefore, some means are provided, whereby the rudiments of an education can be obtained without trenching materially upon the time necessarily devoted to their daily employments, this latter class must remain forever shut out from the benefits of an illuminated intellect, and the country consequently suffer from a horde of ignorant superstitious, and unprofitable citizens.

In view of this state of facts, many city boards of education, (ours among the number,) have established evening schools, where persons employed at laborious occupations can assemble after the labors of the day are done, and receive instruction from a competent corps of teachers detailed for the purpose. There are two such schools now in operation—one in the eastern and one in the western portion of this city—and are well attended by just such persons as are shut out from the privileges of the day schools. The scholars of the latter are prohibited from attending in the evening, so that the class designed to be benefited by the evening schools can receive the undivided attention of the teachers; and the amount of good accomplished by them is incalculable. While the long evenings of the autumn and winter continue, these schools are kept open. The gleaming windows of the school-room rival in brightness the illuminations of a cotton-mill; but the object of that illumination is in the former instance of infinitely greater importance, clothing the mind, instead of the body, in habiliments of beauty, and elevating blinded and depressed humanity to the true position designed it by the Creator.

A YOUTHFUL PRODIGY.

The following is from the Paris correspondence of the N. Y. Express:—"The prodigy of to-day is a little boy of nine years of age, who possesses the most wonderful talent for drawing; not the school-boy sketches of peaked faced cats and tumble-down houses, but masterpieces of the art are executed by him. He is the son of one of the heads of the Sevres porcelain factory, and is thus ever surrounded by graceful and beautiful models for his pencil. His manner of drawing is in itself something out of the common way. Does he wish to execute a horse, it is not by the head he commences, (I mean no pun,) but by one of the hind legs or the tail; it is not his pencil that moves onward, but the paper which gradually pushed by the child's left hand underneath the massive lead, receives the lines proportion and shades intended by the little designer. A short time since the Emperor and Empress, with their suite, visited the factory. The boy's father was not there, but in his absence his youthful representative did the honors, and talked very glibly to their majesties. After a time they joined him, and when he was discovered it was with an elegant and astonishing drawing of the imperial carriages before the door, and, what was more astonishing still, the persons in the carriages were all portraits of their Highnesses and their accompanying suite."

This gift is evidently inherited; he being the son of the head of a porcelain establishment.—In making stone the clay is moved. If this is so in making porcelain, and undoubtedly it is measurably so, it would account for his moving his paper instead of the pencil.—*Phrenological Journal.*

AMHERST COLLEGE.—The Rev. Dr. Stearns was inaugurated as President of Amherst College on the 22d instant. An address was delivered by the retiring President, Rev. Dr. Hitchcock, and another by the new President. Dr. Hitchcock was also installed as pastor of the college church. The sermon was preached by Rev. Dr. Leavitt, of Providence, his brother-in-law.

METHOD.

Dispatch is the soul of business, and nothing contributes more to dispatch than method. Lay down a method for everything, and stick to it inviolably, as far as unexpected incidents may allow. Fix one certain hour and day in the week for your accounts, and keep them in their proper order; by which means they will require a very little time, and you can never be much cheated.

Whatever letters and papers you keep, docket and tie them up in their respective classes, so that you may have instant recourse to any one.

Lay down a method also for your reading, for which you allot a certain share of your mornings; let it be in a consistent and consecutive course, and not in that desultory and unmethodical manner in which many people read scraps of different authors, upon different subjects. Keep a useful and short commonplace book of what you read, to help your memory only, and not for pedantic quotations. Never read history without having maps, and a chronological book, or tables, lying by you and constantly recurred; without which, history is only a confused heap of facts.

One more I recommend to you, by which I have found great benefit, even in the most dissipated part of my life, that is, to rise early, and at the same hour every morning, how late soever you may have sat up the night before. This secures you an hour or two at least of reading or reflection, before the common interruptions of the morning begin; and it will save your constitution by forcing you to go to bed early at least one night in three.—*Selected.*

A LOVE OF LITERATURE.—Were I to pray for a taste which should stand me in stead under every variety of circumstances, and be a source of happiness and cheerfulness to me during life, and a shield against its ills, however things might go amiss, and world frown upon me, it would be a taste for reading. Give a man this taste, and the means of gratifying it, and you can hardly fail of making him a happy man; unless, indeed, you put into his hands a most perverse selection of books.—You place him in contact with the best society in every period of history—with the wisest, the wittiest, the tenderest, the bravest, and the purest characters who have adorned humanity. You make him a denizen of all nations, a cotemporary of all ages. The world has been created for him.—*Sir John Herschel.*

DEFECTIVE EDUCATION.—It is said that out of 400 young men just now seeking British Government employment, only 30 could pass the following examination, simple as it is, viz: To write a good business note; take down a paragraph from a standard author from dictation; write out the names of the different counties in England, and exhibit a knowledge of the four first rules of Arithmetic. Of the incompetents it is said that the majority were offshoots of the aristocracy, and not of the middle class whom Cobbett used to conjure to "turn away their eyes from Somerset house."

Variety.--Grave and Gay.

LITTLE drops of water,
Little grains of sand,
Make the mighty ocean,
And the beauteous land.

And the little moments,
Humble though they be,
Make the mighty ages
Of eternity.

THE best cough mixture that has yet been made, consists of a pair of thick boots, mixed with lots of air and plenty of exercise. People who hug the stove and grow lean, will please notice.

A CROWN boy boasted that his father had a horse, when his companion, of poorer parentage, replied exultingly:—"And my father has a horse and a saw too."

IT is in Utah that the demise of a married man is adequately mourned. One of the Mormon Elders recently deceased, is deplored by *twenty* inconsolable widows.

MRS. PARTINGTON is anxious to know, if the compass has a needle and thirty-two points, how long it will take a woman with such a needle to make a shirt.

THE church of God is often the most prosperous, when she has least in her coffers, fewest in her temples, and nothing but hostility in the world.

BE slow to choose a friend, and slower to change him; be courteous to all; scorn no man for his poverty, worship no person for his wealth.

ADVERSITY overcome, is the brightest glory; and willingly undergone, the greatest virtue. Sufferings are but the trials of valiant spirits.

THE greater part of men have no opinion, still fewer an opinion of their own, well reflected and founded upon reason.

HE is rich who receives more than he spends; he, on the contrary, is poor, who spends more than he receives.

THE idle should not be classed among the living; they are a sort of dead men who can't be buried.

AN Irish editor, in speaking of the miseries of Ireland, says:—"Her cup of misery has been for ages overflowing, and is not yet full!"

SOMETHING must be left as a test of the loyalty of the heart—in Paradise, a Tree; in Israel, a Canaanite; in us, Temptation.—*Cecil.*

WHEN a noble life has prepared old age, it is not the decline that it recalls, but the first days of immortality.

MAN ought always to have something which he prefers to life, otherwise life itself will appear to him tiresome and void.

A WANT of confidence has kept many a man silent. A want of sense has made many persons talkative.

HE that preaches gratitude pleads the cause of God and men; for without it we can neither be sociable nor religious.

Useful Olio.

AN HOUR AT THE ASSAY OFFICE.

THE *New York Evening Post*, under the above title, gives an interesting account of the operations of the Assay Office in that city, which we propose to furnish to the readers of the RURAL; dividing it into such portions as will not mar its arrangement or break the continuity:

What becomes of the gold? Doubtless this is the question that some of the readers of the *Evening Post* are often puzzled to answer,—They know all about the digging, grinding, and washing of it in the mountains and streams of California, and its transmission over the Isthmus till it reaches the port of New York. They hear of its safe arrival in the trusty hands of Adams's and other express companies, but after that they know nothing of it except when they are reminded of its presence by the sight of some bright, newly-stamped five or ten dollar piece, which, however, has a proverbial facility for taking to itself wings, before the possessor has had time to reflect whence it comes or whither it goes.

If our inquisitive readers will take a walk with us to the rather venerable looking (at least for New York) granite building adjoining the Custom House, in Wall street, and now occupied as the United States Assay Office, they will be able to satisfy their curiosity. Mr. Batterworth, the superintendent, of whom we make our first inquiries, informs us of the objects of the Assay Office, namely, the determination of the value of the gold brought into our city, and the preparation of it for coinage by the United States Mint at Philadelphia, or for transhipment, in bars to foreign countries. This view of its duties is not, however, agreed to by all parties, though it has been approved by the Secretary of the Treasury, Mr. Guthrie.

Our readers will bear in mind that the Assay office, where the melting, refining, parting, and other operations upon the gold are performed, is in the rear of the building fronting on Wall street. The latter is occupied by the Sub-Treasurer's office and weighing room, and by the private rooms of various incumbents of government offices. But before we witness the processes referred to, let us visit the Treasurer's weighing room, which is in the front building. Here all the deposits, whether in bars or dust, (generally, however, in dust,) are first brought, and here their original weight is ascertained. The dust, which lies in, it may be, half-peck boxes on the floor, is not, as might be inferred from the name, a fine, bright yellow powder, but looks rather like dingy, brass-colored granite, broken by a hammer into the fineness of ordinary Turk's Island salt. After weighing, the deposit is carried into the Treasurer's vault, in the Assay Office proper, whence it is taken and melted.—The melting is done in crucibles containing two or three gallons, over a coal furnace heated to an intensity that would satisfy Nebuchadnezzar himself. The poor, swarthy melter, who superintends with a long handled ladle, say ten feet in length, even at that distance turns to a most copperish hue of complexion, and has to abandon the work in a few hours for the rest of the day. There he stands, watching the boiling yellow fluid, alternately covering it up and stirring it with his long pole, until in an hour or two the contents of the crucible can be dipped out and the molten mass poured into moulds, by which it it is shaped into bars of about three hundred ounces each.

The gold is then returned to the vault of the Melter and Refiner, a cell some twelve feet square, with two iron doors, secured by four locks, and with granite walls, put together with cannon balls inserted between the stones in such a manner as to defy the most ingenious and persevering burglar. Four men are appointed to sentinel this depository at night, and a similar provision is made for the Treasurer's vault, where the gold that has gone through all the processes which are appointed for it, is placed.

On entering this vault in company with Mr. Morfit, the courteous Assistant Melter and Refiner, we were not at first impressed with the appearance of what was there exhibited. Usually one derives his idea of such places from his readings in fairy tales and in the Arabian Nights, where we are told of caves so full of precious metal and jewels that the mind craves a little variety in the way of something more common-place. Not so here, however. In one corner there were perhaps a couple of wheel-barrow loads of silver, as pure and white as the goat hunter, clambering over the hills of Potosi, pulled up with the roots of the sapling he was supporting himself by. In another corner was, perhaps, the same bulk of gold, weighing about four times as much. In such a situation it was not unnatural to think how pleasant it would be to trundle that glittering heap off for the benefit of whom it might concern, and how little one would object to its weight, if such a task were imposed. But how much it expanded one's estimate of what he saw, when informed that that diminutive pile of golden bricks was worth half a million! To what excellent uses could it not be applied! A house in Fifth avenue, ditto Newport, railroad stocks, reputation as a patron of philanthropic societies and foreign missions—all the possible amenities of life are suggested by that little heap in the corner.—There it lay, as Hood says:

Gold! Gold! Gold! Gold!
Bright and yellow, hard and cold;
Molten, graven, hammered and rolled;
Heavy to get and light to hold;
Hoarded, bartered, bought and sold;
Stolen, borrowed, squandered, doled;
Spurned by the young, but hugged by the old
To the very verge of the churchyard mould;
Price of many a crime untold!
Gold! Gold! Gold! Gold!
Good or bad a thousand fold!

THE great law of social life is "Do unto others as you would they should do unto you."

THE CHIEF ENGINEER OF SEBASTOPOL.

IT is well known that by far the greater part of the corps of scientific men in the service of the Russian Government at the present day are foreigners—English, Germans, French or Americans—who have been induced by the liberal offers of the Czar to cast their fortunes in the Muscovite service. But it is not generally known that the Chief Engineer of Sebastopol, he who built the fortifications, deepened the harbor, and rendered the city almost a second Gibraltar, was an Englishman. Such was the fact, as we learn from an English paper. His name was Upton, and thirty years ago he was the Chief Engineer of the Dunchurch and Stamford Railroad, and superintended all the great improvements on the Holyhead Road. His talents and abilities were of a high order, and acquired for him the respect and confidence of the Commissioners of the roads upon which he was engaged. Unfortunately, being a man of expensive tastes, he lived beyond his means, and, for the purpose of procuring money, defrauded the Holyhead Road of many small sums, exceeding in the aggregate $10,000. The frauds were discovered, and he was held to bail to answer the charge.

On the day before the commencement of the trial, he accidentally obtained information that he would be indicted for forgery, as well as for fraud, and, if found guilty, would probably be hanged. He retired to his couch, however, as usual, at his hotel in Northampton, but arose at an early hour, and went out to take a short walk before breakfast. He extended his walk to the railroad depot, and took the cars for London. In that city, by some means, he got a recommendation to the Russian authorities, and receiving from them the appointment of engineer, was soon on his way to the Crimea. He was there employed upon various fortifications in the Black Sea, and some years previous to his death, which occurred twelve months since, he was the chief engineer at Sebastopol. He found Sebastopol in a very inefficient state, and at once proceeded, by dint of labor, science and Russian money, to render it the strong fortification which it is at the present day. The Emperor was so much pleased with the result of his labors, that, among the other high honors, he conferred upon him the rank of Lieut. Colonel.—*Boston Journal.*

AGES OF ANIMALS.

A BEAR rarely lives more than twenty years; a dog lives twenty years; a fox fourteen or sixteen; lions sometimes live to the age of seventy. The average of cats is fifteen years; a squirrel and hare seven or eight; rabits seven. Elephants have been known to live to the age of four hundred years. When Alexander the Great had conquered one Porus, King of India, he took a great elephant, which had fought very valiantly for the king, named him Ajax, dedicated him to the sun, and then let him go with this inscription:—"Alexander, the son of Jupiter, hath dedicated Ajax to the sun." This elephant was found with this inscription three hundred and fifty years after.—Pigs have been known to live to the age of thirty years; the rhinoceros to twenty. A horse has been known to live to the age of sixty-two, but average twenty-five or thirty.—Camels sometimes live to the age of one hundred. Stags are long lived. Sheep seldom exceed the age of ten. Cows live about fifteen years. Cuvier considers it probable that whales live one thousand years. The dolphin and porpoise attain the age of thirty. An eagle died at Vienna at the age of one hundred and four years. Ravens frequently reach the age of one hundred. Swans have been known to live three hundred years, and the tortoise a hundred and seven.

CREDIT AND CHARACTER.

THERE is no lesson more important for the young, than that which inculcates *promptness* and *punctuality*, not only in all momentary dealings, but in every transaction of life.—Nevertheless, it is a common error with many to disregard both qualities, and thus to impair confidence, destroy credit, and weaken character. Only let it once be understood that an individual is reliable and may be depended upon, and the character of that man will be established upon a rock of adamant. This is one great secret, not only of success in trade, but of confidence, esteem, and respect among friends and neighbors. It forms the soul and source of an enlarged credit. Reliability is indeed not only a great virtue, but it is absolutely essential in our dealings with one another, and in every phase and condition of life.—Never make a promise that you do not intend to perform, and be especially careful to avoid entering into an engagement that you know it will be almost impossible to fulfil. The consequence of such an error must be to impair confidence, induce caution, and excite distrust.

FOUR GOOD HABITS.—There were four good habits a wise and good man earnestly recommended in his counsel, and also by his own example, and which he considered essentially necessary for management of temporal concerns. These are Punctuality, Accuracy, Steadiness and Despatch. Without the first of these, time is wasted; without the second, mistakes the most hurtful to our own credit and interest, and that of others, may be committed; without the third, nothing can be well done; and without the fourth, opportunities of great advantage are lost which it is impossible to recall.

ONE of the greatest evils of the world is, men praise rather than practice virtue. The praise of honest industry is on every tongue, but it is very rare that the worker is respected more than the drone.

IF you are disquieted at anything, you should consider with yourself, is the thing of that worth, that for it I should so disturb myself, and lose my peace and tranquility.

Sunday Reading.

DEATH AND HEAVEN.

BY JOEL P. BRIGGS.

The righteous weep; yet every tear's a gem
By angel beauties borne
To grace the Saviour's blazing diadem,
At the ascension morn.

The righteous suffer, and their frames decay,
Again from death to rise;
Jesus shall come to bear them all away
To yonder skies.

There's a victory o'er all mankind,
Impartial to the just;
It conquers clay, but spares the steadfast mind;
The Saviour's trust.

A beam of glory leaves the world of love,
And o'er their features plays;
The soul, rekindled at the source above,
Seems all a blaze.

A song exceedingly beautiful is heard
From that delightful tongue,
And "Jesus, Jesus!" is the sweetest word
In notes among.

A whispered farewell, and an angel smile!
The mortal race is run;
And still the spirit hovers for awhile,
Ere glory's won.

"I am with Jesus," is the last we hear;
The lips are cold and calm;
Upon those features rests no shade of fear,
He's with the Lamb!

DEATH OF JOHN RANDOLPH.

THE following beautiful specimen of "word painting," we extract from "Party Leaders," a new work by Joseph G. Baldwin:

Randolph, in fast declining health, reached Philadelphia, whither he went to take passage from that port. He was too late for the Liverpool packet. He exposed himself to the inclemency of the weather, took cold, which aggravated his disease and hastened its final termination. He was put to bed—his deathbed—in his lodgings, at the City Hotel. The idiosyncracies which had, of late years especially, marked his demeanor, distinguished the last hours of his life. The sudden bursts of petulance which disease wrung from him; the affecting kindness and tenderness which disease could not take from him; the rambling conversation in the intervals of acute suffering, in some passages as brilliant as ever—the last gleams of the sinking lamp, the groanings of remorse, which a review of his past life, at the bar of a stern self-judgment, drew from his contrite heart; the fervid prayer; the hesitating hope; the trust qualified by self-condemnation, in the Saviour, whose name he professed; the concluding act, ere the curtain fell upon the last scene of earth, when propped up by pillows, he called witnesses to his confirmation of his will, providing for the freedom and support of his slaves, and the last conscious words which fired his eye and braced his sinking frame, as, speaking in this connection, he laid his skeleton hand strongly upon the shoulder of his faithful servant, John, and said with emphasis—"especially for this man." And then, —this last charge upon his conscience off—his mind wandered away to the light, and the scenes, and the friends of the *Early Day;* and, the mutterings of the voice growing gradually fainter, as he passed on into the thicker shadows of the *dark valley*, the fluttering pulse stood still, and John Randolph, of Roanoke, was numbered with the dead! (June 24, 1833, aged 60.)

They carried him back to his solitary home, and buried him—in death as in life, unsocial and isolated—in the forest of Roanoke. In the soil of Virginia he loved so well, they laid the corpse of her faithful and devoted son.—They left him to rest, after the long fever of his troubled dream of life was over, in an humble and sequestered grave, beneath two stately pines. There let him sleep on! The gloom of their shade, and the melancholy sighing of the wind through their boughs, are fit emblems of the life which was breathed out in sadness and in sorrow.

THE RIGHT KIND OF PREACHING.—It was a beautiful criticism made by Longinus upon the effect of the speaking of Cicero and Demosthenes. He says, The people would go from one of Cicero's orations, exclaiming, "What a beautiful speaker! what a rich, fine voice! What an eloquent man Cicero is!"—*They talked of Cicero;* but when they left Demosthenes, they said, "*Let us fight Philip!*" Losing sight of the speaker, they were all absorbed in the subject; they thought not of Demosthenes, but of their country. So, my brethren, let us endeavor to send away from our ministrations the Christian, with his mouth full of the praises, not of "our preacher," but of God; and the sinner, not descanting upon the beautiful figures and well-turned periods of the discourse, but inquiring, with the brokenness of a penitent heart, "What shall I do to be saved?" So shall we be blessed in our work; and when called to leave the watch-towers of our spiritual Jerusalem, through the vast serene, like the deep melody of an angel's song, heaven's approving voice shall be heard. —*Dr. Clark's Sermon.*

Moss will grow upon grave stones, the ivy will cling to the mouldering pile; the mistletoe springs from the dying branch; and God be praised, something green, something fair to the sight, and grateful to the heart, will yet twine around and grow out of the seams and cracks of the desolate temple of the human heart.

FAITH.—Faith does not consist in thinking that thy sins are comparatively little, and therefore may be forgiven; but in knowing that they are very great, and believing that, though they are ever so many and great, past or present, Christ's blood is above them all.

Ladies' Department.

CONDUCTED BY A——E.

(We copy the following beautiful little poem from BAYARD TAYLOR'S recently issued work entitled "Poems of the Orient:")

CAMADEVA.

The sun, the moon, the mystic planets seven,
Shone with a purer and serener flame,
And there was joy on Earth and joy in Heaven
When Camadeva came.

The birds, upon the lofted tamarind spray,
Sat side by side and cooed in amorous flame;
The lion sheathed his claws and left his prey
When Camadeva came.

The sea slept, pillowed on the happy shore;
The mountain-peaks were bathed in rosy flame;
The clouds crept down the sky—to mount no more
When Camadeva came.

The hearts of all men brightened like the morn;
The poet's harp then first deserved its fame,
For rapture sweeter than he sang was born
When Camadeva came.

All breathing life a newer spirit quaffed,
A second life, a bliss beyond a name,
And Death, half-conquered, dropped his idle shaft
When Camadeva came.

THE LITTLE SISTERS.

"You were not here yesterday," said the gentle teacher of the little village school, as she placed her hand kindly on the curly head of one of her pupils. It was recess time, but the little girl addressed had not gone to frolic away the ten minutes, not even left her seat, but sat absorbed in what seemed a fruitless attempt to make herself mistress of a sum in long division.

Her face and neck crimsoned at the remark of her teacher, but looking up, she seemed somewhat re-assured by the kind glance that met her, and answered,—"No, ma'am, I was not, but sister Nelly was."

"I remember there was a little girl who called herself Nelly Gray, came in yesterday, but I did not know she was your sister. But why did you not come? You seem to love to study very much."

"It was not because I didn't want to," was the earnest answer, and then she paused and the deep flush again tinged that fair brow; "but," she continued after a moment of painful embarrassment, "mother cannot spare both of us conveniently, and so we are going to take turns. I'm going to school one day and sister the next, and to-night I'm to teach Nelly all I have learned to-day, and to-morrow night she will teach me all that she learns while here. It's the only way we can think of getting along, and we want to study very much, so as to sometime keep school ourselves, and take care of mother, because she has to work very hard to take care of us."

With genuine delicacy Miss M—— forbore to question the child further, but sat down beside her, and in a moment explained the rule over which she was puzzling her young brain, so that the difficult sum was easily finished.

"You had better go out and take the air a few moments, you have studied very hard to-day," said the teacher, as the little girl put aside the slate.

"I had rather not—*I might tear my dress*—I will stand by the window and watch the rest."

There was such a peculiar tone in the voice of her pupil as she said, *I might tear my dress*, that Miss M—— was led instinctively to notice it. It was nothing but a sixpenny print of a deep hue, but it was neatly made and had never yet been washed. And while looking at it, she remembered that during the whole previous fortnight Mary Gray had attended school regularly, she had never seen her wear but that one dress. "She is a thoughtful little girl," said she to herself, and does not want to make her mother any trouble. "I wish I had more such scholars."

The next morning Mary was absent, but her sister occupied her seat. There was something so interesting in the two little sisters, the one eleven, and the other eighteen months younger, agreeing to attend school by turns, that Miss M—— could not forbear observing them very closely. They were pretty fuced children, of delicate forms, and fairy like hands and feet—the elder with dark lustrous eyes and chestnut curls, the other with orbs like the sky of June, her white neck veiled by a wealth of golden ringlets. She observed in both, the same close attention to their studies, and as Mary tarried within during the play time, so did Nelly; and upon speaking to her as she had to her sister, she received the same answer, "*I might tear my dress.*"

The reply caused Miss M—— to notice the garb of her sister. She saw at once that it was of the same piece as Mary's, and upon scrutinizing it very closely, she became certain that it was the same dress. It did not fit quite so pretty on Nelly, and was too long for her, too, and she was evidently ill at ease when she noticed her teacher looking at the bright pink flowers that were so thickly set on the white ground.

The discovery was one that could not but interest a heart so benevolent as that which pulsated in the bosom of that village school teacher. She ascertained the residence of their mother, and though sorely shortened herself by a narrow purse, that same night, having found at the only store in the place a few yards of the same material, purchased a dress for little Nelly, and sent it to her in such a way that the donor could not be detected.

* * * * *

Very bright and happy looked Mary Gray on Friday morning, as she entered the school at an early hour. She waited only to place her books in neat order in her desk, ere she approached Miss M——, and whispering in a voice that laughed in spite of her efforts to make it low and deferential—"After this week sister Nelly is coming to school every day, and oh, I am so glad!"

"That is very good news," replied the teacher kindly. "Nelly is fond of her books, I see, and I am happy to know that she can have an opportunity to study them every day."—Then she continued, a little good natured mischief encircling her eyes and dimpling her sweet lips—"But how can your mother spare you both conveniently?"

"O, yes, ma'am, yes, ma'am, she can now. Something happened she didn't expect, and she is as glad to have us come as we are to do so." She hesitated a moment, but her young heart was filled to the brim with joy, and when a child is happy it is as natural to tell the cause as it is for a bird to warble when the sun shines. So out of the fullness of her heart she spoke and told her teacher this little story.

She and her sister were the only children of a very poor widow, whose health was so delicate that it was almost impossible to support herself and daughters. She was obliged to keep them out of school all winter, because they had no clothes to wear, but she told them that if she could earn enough by doing odd chores for the neighbors to buy each of them a new dress, they might go in the spring.—Very earnestly had the little girls improved their stray minutes, and very carefully hoarded the copper coins which usually repaid them.—They had each nearly saved enough to buy a calico, when Nelly was taken sick, and as the mother had no money beforehand, her own treasure had to be expended in the purchase of medicine.

"O, I did feel so bad when school opened and Nelly could not go, because she had no dress," said Mary. "I told mother I wouldn't go either, but she said I had better, for I could teach sister some, and it would be better than no schooling. I stood it for a fortnight, but Nelly's little face seemed all the time looking at me on the way to school, and I couldn't be happy a bit, so I finally thought of a way by which we could both go, and I told mother I would come one day, and the next I would lend Nelly my dress and she might come, and that's the way we have done this week. But last night, don't you think somebody sent sister a dress just like mine, and now she can come too. O, if I only knew who it was, I would get down on my knees and thank them, and so would Nelly. But we don't know, and so we're done all we could for them—*we've prayed for them*—and O, Miss M——, we are all so glad now. Ain't you, too?"

"Indeed I am," was the emphatic answer.—And when on the following Monday, little Nelly, in the new pink dress, entered the school-room, her face radiant as a rose in sunshine, and approaching the teacher's table, exclaimed, in tones as musical as those of a freed fountain, "I am coming to school every day, and O, I am so glad!" Miss M—— felt as she had never done before, that it is more blessed to give than to receive. No millionaire, when he saw his name in public prints, lauded for his thousand dollar charities, was ever so happy as the poor school teacher who wore her gloves half a summer longer than she ought, and thereby saved enough to buy that little fatherless girl a calico dress.

A MOTHER'S LOVE.

Bright upon the altar of every heart should burn the holy fire of a Mother's love. Akin is it to that of Deity itself, filling the soul with holy aspirations, which lead us heaven-ward, and teach us that beyond the darkness of the sombre grave, its fullness shall be only felt.

Black, indeed, is that soul that has not some time known the soothing comfort of a Mother's love. When bowed down by care, or racked with pain, has not the gentle voice of thy sainted Mother whispered sweet comfort and ministered like an angel of mercy to thy relief? In moments of reflection, and when alone, has not memory brought back the gentle echos of her voice, which, falling upon thine ear, like the murmuring of the gentle brooklet, beneath the calm soft moon-light; or the dulcet strains of the aeolian's softest cadences—bathed thy soul in bliss, and given thee a peep into the brightness of Heaven, which she awaits to share with thee?

Gentle reader, if thy mother live, love, cherish, honor and obey her; and by acts of kindness smooth her path to the "grave, whither thou goest!"

If she live in eternity, remember her undying love for thee! Remember her sainted look as she knelt by thy bedside and poured out at the throne of the Everlasting, her heart's most earnest prayer for thy happiness, present and to come! Remember this, and show by every act of thine that thy mother "being dead, yet speaketh" unto thee with a voice of an unsullied and translated soul!

MARRIAGE.—We celebrate the wedding, and make merry over the honeymoon. The poet paints the beauties and blushes of the blooming bride; and the bark of matrimony, with its freight of untested love, is launched on the uncertain ocean of experiment, amid kind wishes and rejoicings.—But on that precarious sea are many storms, and even the calm has its perils; and only when the bark has weathered these, and landed its cargo in the haven of domestic peace, can we pronounce the voyage prosperous, and congratulate the adventurer on his merited and enviable reward.

THE love of admiration is the canker upon the heart of many a lovely woman. It is vanity in its worst form. It insinuates itself into the moral nature, and either makes the woman an object of vulgar stare or public notoriety. When her beauty is gone, the absence of the stimulant to her weakened nature leaves her irritable and disappointed. Beauty is a dangerous inheritance, and requires a special duty from the owner of it. The destiny of a beautiful woman is nobler than to be stared at by a vulgar crowd, or flattered by heartless society.

GOOD nature, like the bee, collects sweetness from every herb. Ill-nature, like the spider collects poison from honeyed flowers.

WRITTEN FOR THE RURAL, TO ILLUSTRATE THE CUT, BY L. WILMOTH.

Peaceful slumbering on the ocean,
Night and silence reign around;
Scarce a zephyr's gentle motion,
Stirs the tide with rippling sound.
Luna's disk in radiance beaming,
Half concealed in floating cloud,
Lights with rays like silver seeming,
Tapering mast, and spar, and shroud.

Darkness, from her presence flying,
Hides itself in caves afar;
While the deep blue vault o'erlying
Gleams with many a radiant star,
Throughout Nature's wide dominion,
Not a sound of life is heard;
Folded is the downy pinion
Of the ocean's restless bird.

Who would dream the gentle zephyr
Ever could change to howling blast?
Or that murky cloud could ever
Over the sky like night be cast?
Sleeping waters tossed in surges,
By the wave compelling storm,
Till the barque its fury urges
Meets with wreck in direful form!

Thus too oft in peaceful slumbers,
Life's broad ocean seems to rest;
While the barques, in countless numbers,
Floating on its quiet breast,
Soon by swift tornadoes scattered,
Wildly tossed on maddened wave,
Sink at last, all wrecked and shattered,
Deep into an ocean grave.

Miscellaneous.

(For the Rural New-Yorker.)

REFLECTIONS OF VENICE.

Leaves from a Traveler's Note Book—No. IV.

There is a glorious city in the sea,—
The sea is in the broad, the narrow streets,
Ebbing and flowing; and the salt sea-weed
Clings to the marble of her palaces.
* * * * * *
* * And from the land we went
As to a floating city—steering in,
And gliding up her streets as in a dream,
So smoothly—silently. —ROGERS.

IT is impossible to conceive anything more singular and astonishing, or more beautiful and sublime, than the appearance of Venice when viewed for the first time from the sea. All the encomiums that have ever been lavished upon the splendor of the scene, do not express one-half the beauty it presents: rising, as it does, like a gorgeous exhalation, so gradually and majestically from the waters of the Lagoon, it appears not like a reality, but rather like the phantasm of a beautiful dream—like an enchanted city in a fairy land. But as you approach nearer to its sea-girt palaces, the splendor of the novel scene begins to fade, although the interest and wonder grows; all that history has recorded, and poetry sung or imagined of this romantic city, comes fresh to the memory, awakening feelings and associations that are wholly indescribable; its palaces, though majestic, appear forlorn, and their time-worn, crumbling facades serve but to remind one that its former realm of enchantment has passed away, that its ancient Doges have long ceased to exist, and that this "proud and floating city of the sea" has become but a manacled slave, for the only banners that now flout over it are, alas! those of Austria, and its only glory is that of the past.

Entering the city, one cannot help noticing the strange and solemn stillness that pervades it. No rattling carriages rumble over stony pavements, no sounds of the trampling hoofs of horses fill the air,—the silence is alone broken by the melancholy cry of the gondoliers and the splash of their oars, coupled with the murmuring sound of human voices.

The gondola is the sole means of conveyance; it is a row-boat about twenty-five or thirty-feet in length, sharp at each extremity, like an Indian canoe. In the centre of the finest of them is a covered pavilion with windows in the side, that can be opened or closed as the occupant wills. The gondolier stands upright, and rows with his oar always and only upon one side, guiding the boat with astonishing dexterity, and forcing it rapidly along the water of the boat-thronged canals. The gondolas have always a sombre, gloomy appearance, the paint, furnishing and everything appertaining to them being black. Why this particular color is selected it is impossible to say, although several curious surmises concerning it have been made. Byron's description of a gondola is inimitable:

"Didst ever see a gondola? for fear
You should not, I'll describe it you exactly:
'Tis a long covered boat, that's common here,
Carved at the prow; built lightly but compactly,
Rowed by two rowers, each called gondolier,
It glides along the waters, looking blackly,
And like a coffin clapt in a canoe,
Where none can make out what you say or do.

"And up and down the long canals they go,
And under the Rialto shoot along
By night and day, all paces, swift and slow;
And round the Theatres, a sable throng,
They wait in their dusk livery of woe;—
But not to them do mirthful things belong,
For sometimes they contain a deal of fun,
Like mourning coaches when the funeral's done."

The Piazza San Marco, usually the first place visited by travelers, is the only spot of ground, of any size in Venice. It is in the form of a parallelogram, with the Church of St. Mark at one extremity; the other three sides are bordered by the Ducal Palace, or Palace of the Doges, and other splendid edifices of a similar style of architecture. In front of St. Mark's Church are three bronze pedestals, in which are inserted three lofty masts of a flaming red color, which were placed there to celebrate the victories obtained by the Venetians over Cyprus, Candia and the Morea: from these masts once proudly floated the gold and silken banners that represented the three provinces of the Republic of Venice; the flags of Austria have unfortunately displaced them.

The Church or Cathedral of San Marco is a singular and grotesque combination of opposite styles, the beautiful Gothic and the rude Oriental being inharmoniously blended—what it lacks, however, in taste and elegance it makes up in richness and novelty. Beautiful mosaics, splendid columns of rare and costly marble, exquisite arabesques and richly sculptured basso-relievos are jumbled together with but little regard to style or harmony. But when it is considered that the church is built of the fragments of different splendid edifices brought home by the ancient Venetians from the different countries they had conquered, it does not appear at all singular that the building presents the curious medley that it does; some of the columns are Grecian, some Moorish, some Gothic, surmounted with Doric, Ionic or Corinthian capitals; some of them are of white, some of black and some of reticulated marble of different hues, while a portion are formed of bronze, porphyry, verd-antique, serpentine, and other precious materials. The relics preserved in the church are numerous, and were they not *rather apocryphal* would be of incalculable value. Among them are a piece of the robe of our Saviour, some of the earth that was saturated with the blood that flowed from his wounds at the time of his crucifixion, a small fragment of the pillar to which he was bound when he was scourged, and *of course*—for no collection would be complete without it—a piece of the true cross; but more precious than any or all of these, are *the remains of St. Mark himself*, whose ashes were brought from Alexandria and deposited within the church!

Close to the Cathedral is the Campanile, or bell tower, an enormous brick structure about three hundred and fifty feet in height. An ascent to the summit repays one well for the laborious task, as a truly magnificent view is thus obtained of Venice, with its numerous labyrinthine canals. Conspicuous above all of them is the Grand Canal that winds through the city in the form of an inverted letter S.

The Ducal Palace that bounds one side of the Piazza is built in the form of a square, with its front supported upon a double range of arches. The rooms within the Palace are splendidly decorated, and the greater portion of them ornamented with beautiful paintings upon the walls and ceilings by the most celebrated artists of the Venetian school. Pre-eminent among them are those of TINTORETTO, TITIAN, and PAUL VERONESE. Nearly all the paintings represent the battles, victories and other memorable incidents connected with the Republic. In the Grand Council Room is a beautiful representation of Paradise, by TINTORETTO—the largest picture ever painted upon canvass, being eighty-four feet in length by thirty-four in width. The ancient Senate Room of the Three Hundred, as it is called, is extremely interesting, from the fact that all the affairs of the Republic were deliberated upon and arranged within it. Adjoining it is the hall where the Council of Ten held their meetings and concocted some of the foulest crimes that ever blackened the pages of history.

The Palace is separated from the Carceri, or public prison, by a narrow canal. The prison is a fine yet dark and gloomy building, which in appearance corresponds well with the use to which it was devoted. It is connected with the Palace by a covered bridge, elevated about twenty feet above the level of the canal—the celebrated Ponte del Sospiro, or Bridge of Sighs. Over this bridge, in former times, criminals, after receiving their condemnation from the Council of the Ten, were conducted to a cruel confinement or mysterious death. Well may it be called the Bridge of Sighs! Even now, it is impossible to cross it without shuddering at the remembrance of the many wretched victims that have passed over it never to return.

Crossing the bridge, you enter at once into the Prison, and, conducted by a guide, descend with lighted tapers to the dungeons below in which the prisoners of state were confined.—They are exceedingly small and so constructed that not a ray of light, even the faintest, could enter them. Some of the cells, reeking with damp odors, are below the surface of the water. To the passage-ways that lead to them are several arches with iron bars across them, upon which the miserable victims were suspended until dead. In one of the rooms, in which the criminals were drawn and quartered, there are several small holes in the pavement, communicating with the canal; they have grooved gutters leading to them, through which the blood of the butchered convicts was discharged. A door opens upon the canal from this apartment, from which, no doubt, the dead bodies were cast into boats, to be carried to the main land for burial. J. M. H.

Rahway, N. J., Nov. 1854.

THE PRINCESS AND THE TUTOR.

An emperor's daughter, who was delighted with the profound learning, the lively wit, and the strict adherence to the precepts of morality and religion, which characterized her tutor, one day inadvertently made this remark to him:

"What a pity that so fine a soul as yours is not in a more agreeable body!" He made in reply, the following inquiry:

"In what sort of vessels, madam, is your father's wine preserved?"

"In earthen vessels," was the answer.

"Can that be possible?" replied he. "Why, every citizen preserves his wine in earthen vessels; I should have thought gold or silver ones would have been more suitable to the dignity of an emperor."

"You are right!" exclaimed the princess, "and henceforth this mark of respect shall not be omitted."

In a few days, however, she again accosted her tutor on this subject, saying:

"In the muddy vessels you recommended, my father's wine was spoiled; the spirit evaporated; while that wine which was placed in earthen ones improved in quality."

"Very possible," rejoined the philosopher. "So also with virtue and knowledge; the more humble the exterior of that in which they are contained, the more luxuriantly they will flourish, and the more forcibly excite our admiration."

THE PHILOSOPHER AND THE CHILD.

A PHILOSOPHER once asked a little girl if she had a soul. She looked up into his face with an air of astonishment and offended dignity, and replied:

"To be sure I have."

"What makes you think you have?"

"Because I have," she promptly replied.

"But how do you *know* you have a soul?"

"Because I *do* know," she answered again.

It was a child's reason; but the philosopher could hardly have given a better.

"Well, then," said he, after a moment's consideration, "if you know you have a soul, can you tell me what your soul is?"

"Why," said she, "I am six years old, and don't you suppose that I know what my soul is?"

"Perhaps you do. If you will tell me I shall find out whether you do or not."

"Then you think I don't know," she replied, "but I do: it's *my think*."

"Your *think*!" said the philosopher, astonished in his turn; "who told you so?"

"Nobody. I should be ashamed if I did not know that, without being told."

The philosopher had puzzled his brain a great deal about the soul, but he could not have given a better definition of it in so few words.—*Reaper.*

AMERICAN BENEVOLENCE.—There is no element of the American character that seems to stand out in bolder relief than the disposition to succor the unfortunate. It matters not how violent the excitement of party strife, or what sectional diversity of opinion may exist, the moment that it becomes known that a sister city is stricken down by pestilence or by fire, a struggle ensues as to who shall come earliest to the rescue. This is, indeed, a noble trait in the character of our people and shows that, however much we may be reproached for lust of acquisition, there is still a redeeming spirit of fraternal kindness which soars above the selfish sordidness usually incident to frail humanity.—*National Intelligencer.*

THE pride of no person in a flourishing condition is more justly to be dreaded, than that of him who is mean and cringing under a doubtful and unprosperous fortune.

RURAL NEW-YORKER

ROCHESTER, DECEMBER 9, 1854.

SPECIAL NOTICES—TO AGENTS, &C.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THOSE who are forming clubs, (20 to 50 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ IN remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ IN writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County and State. Write all names plainly.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ SPECIMEN numbers of the RURAL cheerfully forwarded to all disposed to aid in augmenting its circulation. We will send to your own, or the address of friends, all the necessary documents—extra numbers, show bills, prospectuses, &c. It will afford us pleasure to respond to all requests in this line.

Our Next Volume—Briefly.

THE next volume of "Moore's Rural New-Yorker," will be printed upon new copper-faced type, with a new Hoe power press, and be rendered unusually attractive in its exterior appearance, by new designs for its title and other headings, and tasteful arrangement. The proprietor is determined to make his periodical still more worthy of the immense and increasing patronage it receives.

THOUGH unauthorized by us, the above paragraph from a late number of the *Daily Democrat* newspaper, is, like the generality of news in that excellent diurnal, mainly correct. The truth is, that we have resolved to render the forthcoming volume of the RURAL NEW-YORKER far superior, in every and all respects, to either of its predecessors, or any contemporary journal,—and if abundant means and facilities, and a disposition to use them liberally will avail, the laudable object shall be satisfactorily accomplished. This is strong language, we are aware, but earnest and well considered,—frankly uttered because sincerely believed. Grateful for the large measure of support already accorded, and anticipatory of the unexampled increase which we confidently expect during the ensuing year, we have made such arrangements to augment both its value and attractiveness as will render the RURAL still more deserving its rapidly increasing National Circulation.

IF the items mentioned by the *Democrat* prove as anticipated,—as represented by artists and manufacturers,—the RURAL for 1855 will present a greatly improved and beautiful appearance. The new type and press will enable us to print *better* and *faster* than heretofore,—so that we can probably strike off and mail, in the same time now occupied, from ten to twenty thousand copies *more* than our present edition. But there are other essentials of greater importance, in our estimation, than *appearance or speed in printing*. The *matter* of a paper, rather than its *manner*, should receive the first and greatest attention. Hence we shall give this feature of the RURAL precedence in labor and expense—sparing no reasonable effort to improve its CONTENTS. Our arrangements with former and new Assistant Editors and Contributors (about whom more in a week or two) are such that we can safely promise there will be no deterioration in any department, and that the whole paper will be sustained in Value and Variety, and Richness and Reliability of Contents.

—Such are our designs—our anticipations and determinations. We may fail in some details, but not for the want of earnest endeavor. Meantime those who desire the eminent prosperity and success of the RURAL can materially promote the same by instituting measures to augment its circulation in their respective neighborhoods. But *that* is a point which we did not intend to introduce, though proper action on the part of friends is most essential to the complete success of our enterprise.

Congressional Proceedings.

THE Thirty-third Congress commenced its second session on Monday last. The session cannot last longer than till the fourth of next March, as the term of the present Congress then expires. It is not very probable any new or startling measures of legislation will be adopted this winter, as a large portion of the members will have to compose their official robes about them so as to present the spectacle of a decent and dignified political death. We might say, in a funeral oration over them, what MARK ANTONY said over the dead body of CESAR. "The evil men do lives after them; the good is often interred with their bones," if we only knew of their doing any good.

The telegraph announces that both branches organized on the first day. A letter was read in the Senate from Mr. ATCHISON, of Missouri, resigning his position as President of that body, whereupon, on motion, Hon. LEWIS CASS was called to the chair. A joint committee of the two Houses was appointed to wait on the President and inform him of the organization, and that they were ready to receive any communication he might be desirous to make. The President's Message was then received and read, after which both Houses adjourned.

Great Snow Storm.

A SNOW STORM, unprecedented in length and violence, has been raging here for the past few days. On Friday, the 1st inst., a few inches of snow fell, which was slightly increased up to Saturday night, at which time a regular storm set in. The snow fell uninterruptedly all through the day, Sunday, and Sunday night.—Monday brought no abatement, and up to the present time (Tuesday afternoon) the snow continues to fall thick and fast. There is probably three feet of snow upon a level, but the wind has piled it up in huge drifts like waves of the sea.

Of course an effectual veto is put upon all outside operations, and the streets of our city have rarely presented a more lonely and desolate appearance. The railroads are blocked up, and an army of men are constantly at work clearing the track. The immense motive power of the Central is called into requisition for the same purpose, but the road is scarcely opened before it is drifted full again. A train left on Monday morning for Buffalo, composed of three locomotives and one passenger car, and, proceeding at a slow rate to a point about five miles west of this city, came in collision with another train, drawn by two locomotives, and coming down. The sky was so thick with the falling snow that the engineers could not see, and hence the collision. The engines and tenders were all damaged more or less, but no further harm was done. Another train on the Lockport and Niagara Falls road ran off the track at the junction of the Charlotte road, a mile west of the city, and the two engines drawing it were badly damaged.

The storm is not alone confined to this locality, but extends to a great distance East and West. The telegraph announces the following depths of snow in various localities up to the evening of Sunday. Of course it must have been greatly increased since then:

Buffalo ten inches, Lockport 12, Medina 12, Brockport 18, Newark 20, Canandaigua 18, Geneva 10, Seneca Falls 10, Auburn 18, Syracuse 24, Oneida 30, Rome 18, Utica 18, Little Falls 20, Fort Plain 18, Fonda 12, Schenectady 9, Troy 12, Albany 15, Hudson 12, Poughkeepsie 12, Catskill 12, Newburg 6, Hondout 8, Carmel 12, New York 2, Oxford 16, Norwich 15, Shelburne 14, Hamilton 39, Oriskany Falls 36, Waterville 36.

SPRINGFIELD, Dec. 4.—The fall of snow here has been very heavy. It is at least a foot deep on a level. Owing to the wind it is much drifted. The train which left the city of New York for Boston last night has not yet reached this point, and it is understood to be blocked up near Hartford.

Close of Canal Navigation.

THE Canal Commissioners fixed upon the 5th inst. as the day for closing the canals and suspending navigation; but one higher in authority than the Commissioners, to wit., Jack Frost, promulgated an edict to close them the latter part of last week. The Superintendent, however, not recognizing his right to interfere, sent out an iceboat to break the chain of Mr. Frost. Old Boreas and the other allies on that side came to the rescue, and made prisoner of the foraging iceboat, which, together with a great number of other craft, are placed in durance vile for the winter. A boat loaded with corn broke down the gates of a lock east of this city, and prevented boats passing the latter part of the week, and before the damage could be repaired navigation was closed entirely. Now let the Contractors go to work on the enlargement with all due diligence.

TELEGRAPHIC FEAT.—The President's Message was telegraphed entire over Monse's line from New York to this city on Monday night, notwithstanding the severe snow storm which was raging at the time, rendering the isolation of the wires imperfect, and greatly disturbing the electric action. The transmission commenced at ten o'clock on Monday evening, and at half-past six on Tuesday morning the presses of the *Democrat* and the *American* were at work.—While the citizens generally were fast locked in the arms of sleep, the telegraph and the compositor were busy forwarding the message and putting it in type. Very few men stop to inquire as they glance over the morning news, how much of labor and tireless vigilance *a three cent newspaper costs.*

Kossuth's Prophecy.

WHEN the siege of Sevastopol was first proposed, Kossuth expressed the following decided opinion on the subject, which seems now quite likely to be realized:

"To take an intrenched camp, linked by terrible fortresses, and an army for a garrison in it, and new armies pouring on your flank and rear, and you in the plains of the Crimea, with also no cavalry to resist them, is an undertaking, to succeed in which, more forces are necessary than France and England can ever unite in that quarter for such an aim. Ask about it whichever staff officer has learned something about tactics and strategy. And in that position is Sevastopol, thanks to your Austrian alliance, which, having interposed herself between you and your enemy in Wallachia, made the Czar free to send such numbers to Sevastopol as he likes.

You will be beaten, remember my word! Your braves will fall in vain under Russian bullets and the Crimean air, as the Russians fell under Turkish bullets and Danubian fever. Not one out of five of your braves, immolated in vain, shall see Albion or Gallia again. But I will tell you in what manner Sevastopol is to be taken. It is at Warsaw that you can take Sevastopol.

☞ AN English clergyman has undertaken to preach the gospel in coal pits, and is quite successful.

Synopsis of the President's Message.

WE can only give, this week, a glance of the principal points of the Message. In the opening, the President congratulates the country upon its favorable position as regards the harvests, and the health and prosperity of the people. Although the former have been less abundant than in previous years, they are ample for our own use and afford a partial supply for exportation; although diseases have prevailed during the past summer, general health has been again restored. He then takes up the subject of international law, reiterates the Monroe doctrine, repudiates European interference with the policy of the United States on this continent, and takes the position that "free ships make free goods." Negotiations have been carried on with various powers for the protection of neutral property. The reciprocity and other treaties with Great Britain are alluded to, and a commission recommended for the purpose of determining the boundary line between Washington Territory and the British possessions, and to settle the claims of British corporate companies in that Territory.

The President does not see anything in our affairs with France likely to disturb amicable relations; thinks the chances of a favorable settlement of difficulties with Spain much better; commends the efficiency of the Japan expedition; and considers our negotiations with the various American governments in a favorable position. The President goes into a lengthy and labored argument in defence of the bombardment of Greytown, and subsequently turns his attention to domestic affairs, giving a synopsis of the report of the Treasury department. The whole amount of revenue received during the year is $73,569,705; expenditures, exclusive of redemption of public debt, $51,018,347.

A reduction of duties, an increase of the army and navy, a modification of the Judicial system of the United States, and other matters of public interest are recommended, but want of space and limit of time prevent our noticing them at present.

Missing Man.

SIDNEY SMITH, of Greenwich, Washington Co., N. Y., left his home on the 30th of October, for Macon, Ingham Co., Mich., since which time nothing has been heard from him. Mr. SMITH never reached his destination, and his family and friends are greatly alarmed and distressed by reason of his unaccountable absence, and fear he may have been foully dealt by.—He was about fifty years of age, tall and well proportioned, light eyes and hair, and weighs about 170 pounds.

Any information in regard to him forwarded to NELSON G. MOSS, Greenwich, Washington Co., N. Y., will meet with due reward. Exchange papers please copy.

A BATTLE.—A remarkable fight between an Eagle and an owl occurred at Amsterdam, Va., a few days ago. The eagle seized upon the owl, but found his prey too weighty to be carried off, and in the scuffle the owl fastened his claws in the eagle's thigh, and held his enemy so tight as to make it impossible for him to escape. While in this condition, a gentleman passing by and hearing the scuffle, approached and easily captured both the combatants. The owl was one of the largest of his species, and the eagle measured over six feet across the wings.

A GRACELESS SCAMP.—A gentlemanly looking individual obtained admission a few days ago to the Convent of the Sacred Heart, in St. Louis, and in passing through the chapel appeared to be overcome with feelings of devotion, and knelt before the altar as if in prayer. The Sister who attended him, not wishing to disturb his devotions, left him for a short time. On her return she found the scamp had gone, taking with him a great quantity of jewelry from about the image of the Virgin over the altar. On the same day he stole a valuable gold watch from a priest in St. Patrick's church.

HYDROPATHY.—A Mrs. Leifer, who keeps a millinery establishment in Toronto, Canada, observing a woman from a rival shop examining very attentively the bonnets in her show-window, thought the observer was about purloining her patterns. So she resolved to disturb her musings, and ascending to an upper window, threw a pailfull of water on her observant rival. The result was a wetting and a lawsuit, in which the woman of water came out second best, being fined six dollars.

☞ THE Washington Star says a son of Jas Gordon Bennett, the noted conductor of the New York Herald, through the favor of the French Emperor, is being educated at the French Military Academy. Hence Bennett's love for Louis Napoleon.

☞ THE Common Council of Sacramento passed an ordinance fixing the city taxes for the present year at 2¾ per cent., of which two per cent. is for general purposes, one half of one per cent. to be applied to the sinking fund and one-fourth of one per cent. for school purposes.

☞ THE School Commissioners of Baltimore propose to establish a floating school for the education of boys desirous of becoming seamen. The scarcity of mariners seems to make some such plan necessary.

☞ SOME idea of the commerce of New York may be gathered from the fact that the fees paid to the pilots taking vessels to and from that city, now amount to about two hundred thousand dollars a year.

☞ A bronze statue of the Hon. Thomas Corwin, is to be executed by a Mr. Jones, as soon as $5,000 is subscribed by the people of Ohio. Commissioners to raise the money have been appointed.

☞ NEBRASKA covers an area of 342,938 square miles—equal to over 219,000,000 of acres of land, Kansas has an area of 126,283 square miles, equal to over 80 million acres of land.

News Paragraphs.

☞ A case has been decided in the U. S. Circuit Court at Baltimore, against a railway, for not transporting live stock by the earliest freight train to the market, by which much loss was sustained in the falling of the market price. The court held that when a railway company agrees to transport live stock, it must be done by the earliest train, or they are liable for the damages that may occur.

☞ A joint resolution has been passed by the California Legislature, instructing the representatives of that State in Congress to exert themselves to obtain an appropriation for the sinking of wells in the Humboldt Desert, Utah Territory, for the relief of emigrants, cattle and other trains, journeying overland by that route to and from California.

☞ A young man in Alexandria, Va., is in the habit of going to the banks of the Potomac every day after dinner, and throwing into it a piece of fresh cooked mutton, weighing about two pounds. He thinks that he is required to minister to the wants of two souls in the other world. He is an industrious jeweller, and in all other respects is perfectly sane.

☞ THREE deserters from the U. S. army recently received from twenty-five to fifty lashes at Newport, Ky., and were drummed out of service. One of them was sentenced to wear a chain and ball upon his leg, but as the newspapers say he was drummed out with the others, he will probably constitute himself a court to remit that portion of his sentence.

☞ THE tide of emigration that is sweeping towards Texas is immense. The Port Gibson Herald of a late date says that upon a single route, that lies through Port Gibson and Rodney, there passed within the previous twenty days between four and five thousand persons. These emigrants are principally from Lower Tennessee and the upper part of Alabama.

☞ A few days since, a gentleman of New Albany, opposite Louisville, Ky., while amusing himself by throwing sticks into the river for his dog to swim after, noticed that the animal acted as if he had got a heavier load than he bargained for. He succeeded in reaching shore, however, bringing with him a large salmon that had seized his hind leg for a "bite."

☞ JOSHUA MAIN, member elect of the Assembly for Jefferson Co., N. Y., had a narrow escape from drowning recently, in consequence of the upsetting of a boat in which he was crossing the Chaumont bay, in company with two others. They were in the water an hour and a half before they were rescued.

☞ THE case now on hearing before the Court of Errors and Appeals, says the Trenton (N. J.) True American, involves an amount between $200,000 and $300,000. The defendant in the case is Col. Thorn, who flourished in Paris some years ago, in a style equal to that of Louis Phillippe.

☞ FOUR Wyandotte Indians arrived in Cincinnati a few days since, and endeavored to obtain admission into several of the hotels, without success, and after wandering about the streets for several hours, they sought shelter in the Hammond street station house.

☞ IT is stated that the U. S. District Attorney at New York is engaged in investigating the circumstances attending the late disastrous wrecks of the Arctic, New Era, and Jewess, and proposes to lay the evidence obtained before the Grand Jury for action.

☞ THE present number of invalids in the new military asylum, near Washington, is about 45; and when all the intended buildings are completed, the establishment will accommodate about 200. Col. Payne, of the U. S. army, has been elected governor of this institution.

☞ THE estimate of whale oil in the hands of importers and speculators in the United States at the present time, is as follows:—New Bedford, 42,421 bbls.; Fairhaven, 8,375; Nantucket and Martha's Vineyard, 6,000; Westward, 9,000. Total, 71,796 bbls.

☞ WILLIAM SMITH, for killing Welch's best circus pony by striking him on the head with a mallet, has been committed to jail in Philadelphia, in default of $1,000 bail. He had the care of the circus horses, and says the pony attempted to bite him.

☞ THE Lake Superior News of the 27th ult. says:—By private letters, we learn that the bodies of Sir John Franklin and his men have been found by Dr. Kane's party, frozen and perfectly preserved. From our authority, we have the right to believe it to be true.

☞ THE Government has received advices direct from Commodore Perry, who was at Macao on the 9th of August. Nothing is said by the Commodore respecting the health of the squadron, and it is concluded that all are well. Com. Perry was on his way home overland.

☞ THE statue of the Gladiators, which will be remembered as one of the most beautiful specimens on exhibition at the Crystal Palace, has been purchased by Mr. Risque, of Washington City, for the sum of $3,000.

☞ THE expenses of the corporation of the city of Melbourne are said to be wholly paid from licenses to public houses, and the fines of drunkards, granted and imposed by the police court.

☞ THE Boston Mail "hangs out its banner" with the name of Edwin Forrest as Native American candidate for the next Presidency. Some papers think the Vice Presidency would be more appropriate.

☞ THERE are forty establishments in the United States engaged in the manufacture of locomotive engines, which, it is estimated, turn out in busy times at least 120 locomotives in a year. About 9,000 hands are employed.

☞ JUDGE LUMPKIN, of the Supreme Court in Georgia, has decided that a person to whom a slave is hired for a year is entitled to no abatement of the price because of the death of the slave after the commencement of the term.

☞ A man named Morgan, who shot Mr. Parsons, editor of the Tyler Telegraph, in Texas, about eighteen months ago, was tried at the late term of the Cass County Court, found guilty and fined one cent.

☞ D. C. MCCALLUM, Superintendent of the New York and Erie Railroad, is doing all he can to discountenance the use of ardent spirits by the men in his employ. He will not allow liquor to be sold at any stations.

☞ BILLIARDS were invented by Henrique Devinge, a French artist, in the reign of Charles IX, about the year 1571, and at once came to be a most fashionable and captivating game.

☞ GEO. A. LEAVITT, convicted of robbing his father of fifteen dollars at Manchester, N. H., has been sentenced to one day solitary confinement, and State prison for life at hard labor.

News Brevities.

—— Prince Albert is 35 years of age.

—— Hon. T. H. Benton lectured in Baltimore on the 5th. Subject—"The Pacific Railroad."

—— The only adventurers remaining in the Polar regions are the party of Dr. Kane.

—— Sir John Franklin's expedition consisted of 130 men.

—— Flour is retailing in St. Paul at $10 per bbl. Wheat delivered at the mill brings $1,10.

—— Gov. Gorman has appointed Dec. 21st as a day of Thanksgiving in Minnesota.

—— Of the 281 Unitarian ministers in this country, fifty, or more than one-fifth, were born in Boston.

—— Judge Caldwell, of Ohio, has resigned his position as one of the Judges of the Supreme Court of that State.

—— Three fugitives from slavery passed through Syracuse on Thanksgiving night.—They are now in Canada.

—— News has just been received that Henry A. Wise has received the Democratic nomination for Governor of Virginia.

—— On twenty acres, in Jefferson county, N. Y., 30,000 pounds of hops were raised the present season.

—— The tolls on the Erie Canal shows a decrease at the close of the first week in November of $369,351.

—— Buffaloes are very abundant on the Red river beyond Minnesota, and many hunters will follow them this winter.

—— The New York Evangelist has been sold for $20,000, to Mr. Bidwell, one of the editors, and another party.

—— The Ohio river, at Wheeling, Va., was in fine navigable condition on the 30th of Nov., and steamers were arriving and departing freely.

—— One thousand laborers have been discharged from Mt. Savage Iron Works, in consequence of the heavy decline in iron.

—— A great revival has taken place in the State University of Mississippi, which has resulted in the conversion of seventy students.

—— A Philadelphia paper says the portraits of Wm. Penn and Gen. Lafayette have been withdrawn from Independence Hall.

—— There was an extensive fire in Bridgeport on the 26th ult. Loss about $60,000, of which half was covered by insurance.

—— A French gardener has discovered that by painting his hot-houses with gas-tar, all the insects so destructive to plants and fruit, die.

—— During the recent session of the Vt. Legislature, Miss Lucy Stone received seven votes for the office of Brigadier General of Militia.

—— At Concord, N. H., on Thanksgiving day, snow fell to the depth of ten inches, making the first sleighing of the season.

—— The Cincinnati Commercial says a new batch of counterfeit X's on the State Bank of Ohio is getting into circulation.

—— The London Times correspondent in the Crimea is understood to be a Mr. Russell, an Irishman, and his salary is £1,500 a year.

—— Statistics respecting the loss of life by shipwreck, show that over 7,000 lives have been lost by this means in the last 8 months.

—— The Central University, a Baptist institution in Minnesota, chartered by the last Legislature, will be located at Minneapolis.

—— The State Bank of Indiana had in its vaults, on the 31st of October, $1,086,968 in gold and silver. Its circulation at the same time was $2,803,648.

—— It is said that out of two hundred sailors on board the United States ship Saratoga, on her trip to Japan, only seventeen drank a drop of liquor.

—— Mahogany cutting, in Honduras, the present season, has been highly successful, and about eleven million feet have been brought into market.

—— In Greensboro', N. C., a letter, dated the 10th ult., says that fifty conversions of young ladies have taken place in the Edgworth Female Academy.

—— A clerk on an Illinois river boat has been detected in selling portions of the freight and appropriating the avails to his own use.—He is in jail at St. Louis.

—— During the past year, $269,000 has been contributed for charitable purposes by citizens of Boston, besides a large amount in private charities not made known.

—— One of the New York papers states that Messrs. Duncan, Sherman & Co. helped one of the Wall-st. banks through a tight place a few days since, by loaning it $600,000.

—— At the municipal election in Hartford on Monday week, there were twenty-three distinct tickets in the field. No one who was not on more than one ticket was elected.

—— The Indianapolis papers state that a wagon load of the notes of the Stock Banks were returned one day last week upon the Auditor of the State of Indiana.

—— Detroit is overrun by robbers just now. Cyrus Harman, a printer, was robbed by three ruffians in front of the Mayor's House. The rogues must be hard up to rob a printer.

—— It is ruled by the Post Office Department, that postmasters on returning newspapers to publishers not taken from the office, must frank them as on post office business.

—— M. Guizot's publisher in Paris has given the following advertisement: "In the press, a History of Washington and of the Revolution of the United States of America."

—— Intelligence has been received that the Bentonites in the Missouri Legislature have offered to coalesce with the Whigs to defeat the re-election of Mr. Atchison to the U. S. Senate

—— A native Indian, by the name of Abraham Quady, the last of the tribe which formerly inhabited the island of Nantucket, died in Nantucket on the 26th ult., aged 83 years.

—— The locomotives, in passing through the neighborhood of Marion, Ohio, are obliged to blow their whistles till they get out of the woods, in order to keep the deer off the track.

—— Sevastopol is pronounced with the accent on the penult, being analogous to Constantinople, Adrianople, etc. The termination is derived from a Greek word, meaning a town.

—— Four men have been arrested in New York for robbing one of the freight cars which was shattered by the recent collision on the 4th Avenue, of $200 worth of boots and shoes.

—— The accounts of the Louisiana sugar crop, published in the New Orleans papers, are all unfavorable. They say the amount produced will fall short at least one-third, compared with last year.

Literary Notices.

OUT-DOORS AT IDLEWILD; or, the Shaping of a Home on the Banks of the Hudson. By N. P. WILLIS. New York: Charles Scribner. 1854.

Few of the many volumes Mr. WILLIS has given to the public will live longer or more worthily than this. It is made up of weekly letters written from his country home near Newburgh to the *Home Journal*, which he edits in conjunction with the poet MORRIS. The title well describes its character, and it is enough to say that it is written as only WILLIS can write of the varied incidents of life in the country, as seen by one of extended experience and acquirements. Sold by E. DARROW & BRO.

HISTORY of the Origin, Formation, and Adoption of the CONSTITUTION OF THE UNITED STATES; with Notices of its Principal Framers. By GEO. TICKNOR CURTIS. In two volumes. New York: Harper & Brothers.

THE subject of this work is one of much interest and importance to every American citizen, and we are glad that it has been taken hold of by one so well qualified for the task. This volume first treats of the Constitutional history of the United States from the commencement of the Revolution, to the adoption of the articles of Confederation, and then goes on to notice its framers, WASHINGTON, HAMILTON, MADISON, FRANKLIN, GOVERNEUR MORRIS, KING, PINCKNEY, WILSON and RANDOLPH,—which concludes the present volume. Sold at DARROW'S, Main St.

IDA MAY. A Story of Things Actual and Possible. By MARIE LANGDON. Boston: Phillips, Sampson & Co., 1854.

WE have read this popular story, and think its character and execution will justify the verdict already pronounced upon it by the press and the public. It is well written, and thrillingly interesting, and though critics may point out a few improbabilities in the plot, and inaccuracies in the delineation of character, no one can deny it a large share of that truthfulness and spirit which made "Uncle Tom's Cabin" so universally popular. Sold by WANZER, BRADSLEY & Co., Rochester.

HOME SCENES AND HOME SOUNDS; or, the World from my Window. By H. MARION STEPHENS. Boston: Fieldings & Co. 1854.

THIS is a volume of Tales, Sketches and Poems, gathered from the pages of various periodicals and newspapers, and here presented in a neat come-at-able form to the author's many admirers. It will be likely to win more such, for it is of that class of books which one can take up at odd moments, and open to something readable and interesting. Sold by WANZER, BRADSLEY & Co.

THE HORTICULTURIST.—The December number of this model monthly in all that pertains to Horticultural and kindred affairs, is one of the best ever issued. Since the work was removed from Albany to this city, it has been most ably sustained editorially and publicationally, while its circulation has been greatly augmented.—We trust the new volume, commencing with January, will have thousands of additional subscribers, which we are confident it will merit.—Believing that many of our subscribers will be glad to secure the *Horticulturist*, we have made such arrangements that we can furnish it and the RURAL for $3. See Prospectus in this paper.

HARPER'S MAGAZINE for December, commences a new volume of this widely circulated monthly. New attractions are promised, though if none were added, every subscriber would get his money's worth. We will send the RURAL and this magazine for the ensuing year, on the receipt of $4, to one or separate addresses.

BLACKWOOD'S MAGAZINE for November, contains literary and political matter of much interest. New York: L. SCOTT & Co. DEWEI.

LEGISLATION IN THE OLDEN TIME.—The following act of Assembly was passed in Virginia in 1792:

"An act for the punishment of scandalous persons. Whereas, many babbling women slander and scandalize their neighbors, for which their poor husbands are often involved in chargeable and vexatious suits and costs in great damages. Be it therefore enacted by the authority aforesaid, that in action of slander, occasioned by the wife, after judgment passed for damages, the woman shall be punished by ducking; and if the slander should be so enormous as to be adjusted at greater damages than five hundred pounds of tobacco, then the woman to suffer a ducking for each five hundred pounds of tobacco adjudged against the husband, if he refuses to pay the tobacco."

A DANGEROUS RAILROAD.—A correspondent of the Hamilton Spectator, speaking of the number of lives which have been lost on the Great Western Railway, says, that "since the opening of the road, the passenger trains have run in the aggregate about seven hundred thousand miles, during which they have killed upwards of seventy-four passengers, and wounded and maimed over eighty-two, who had no control over their own actions,—thus giving a passenger killed to every 9,500 miles traveled, while in the State of New York, taking twenty railways, (2,075 miles,) we find, according to the State Engineer's report for 1853, that there was only one passenger killed for every 198,635,149 miles traveled, and one injured for every 6,212,050 miles traveled, or giving the Great Western the unenviable position of having killed in the ratio of nearly 10,500 to 1."

THE GUANO TRADE.—There sailed from the Chincha Islands during the month ending Sept. 30, 45 vessels, (all guano laden,) registering 25,173 tons. Of the above number, 19 vessels, 11,597 tons, sailed for ports in Great Britain; 12 vessels, 8,020 tons, for ports in the United States; 5 vessels, 2,324 tons, for ports in France and her colonies; 3 vessels, 816 tons, for ports in Holland; 2 vessels, 676 tons, for ports in the Italian States, and 4 vessels, 1,640 tons for ports in Spain. Eight of the above vessels, registering 6,338 tons, were American.

Foreign Intelligence.

Arrival of the Africa.

THE steamship Africa arrived at New York Nov. 29, with Liverpool dates to the 18th.

A panic seems to have ensued in the fight fighting before Sebastopol. Despatches, both Russian and British, say "the seige progresses with regularity." Both parties are in want of reinforcements—the besiegers much more than the besieged. The Russians, however, begin to be short of ammunition.

The rapid reduction by battle and disease of the allied force, now reduced to 50,000, has caused great alarm in England and France, and strenuous efforts are now being made to send reinforcements.

An occurrence of the most horrible nature has taken place. The great Hospital in Sebastopol was set on fire by the shells of the allies, and was burned to the ground, with all its inmates—*two thousand sick and wounded*. This frightful circumstance is passed over as quietly as possible in the English and French papers.

VIENNA, Nov. 15.—Dispatches from Balaklava, of date the 11th, have been received this evening, according to which another great battle has been fought. The Russians are said to have lost 9,000 men. The loss of the allies was also great, but they remained masters of the field.

Dispatches from Prince Menschikoff announce that the operations of the seige continued, and that the allies were intrenching themselves strongly on the left flank of their position. Sickness is on the increase in the allied camp. The cold is very severe at night.

Official Russian news, via Vienna, states that from the 5th to the 9th nothing of importance had occurred at Sebastopol. The allies were fortifying their position on the left bank of the Chernaya as strongly as possible. The Russians occupied the right bank. The bombardment of the city continued, but the breaches were always repaired.

THE DANUBE.—A dispatch from Hermannstadt states that several Turkish detachments are close to the Bessarabian frontier. Bubulagh is occupied by the Turks.

Vienna letters say that Omar Pacha has received orders from Constantinople to send all the troops that were in Wallachia to Moldavia, and to carry on operations vigorously. This confirms with the more probable statement that all the men he can spare are to be sent to the Crimea. Fifteen hundred cavalry had already been sent from Shumla to Varna, to be embarked. October 21, 2,500 Egyptians arrived at Constantinople—being the first instalment of 10,000 men sent by the new Viceroy of Egypt.

THE BALTIC.—Advices from St. Petersburgh are to the 7th of November. They report the English fleet to have left the Baltic altogether. Snow had fallen. There was no disposition to forward more produce overland. Two Finland ships had been chartered, and were being loaded with wheat. A private letter, of the 10th, says that winter had set in with unusual severity. Dantzic advices mention that snow there is a foot deep, and the lesser channels around the town icebound. (12th Nov.) There is a great deal of grain and timber at Dantzic ready for shipment, but no prospect of getting it off.

THE FLEETS IN THE BLACK SEA.—Stormy weather prevailed. The Turkish ship-of-war had been lost, and some Egyptian ships (names or number not reported) were missing—supposed also wrecked. The squadrons under Admirals Hamelin and Dundas were in Katcha Bay, with divisions at Balaklava and Kamiesh Bay. Sailmakers and smiths of the fleet were employed in making sandbags and horseshoes.

Admiral Lyons has cut off the communications between Taman, Anapa and the land, and is watching the Sea of Azoff.

California News.

Arrival of the Star of the West.

THE Star of the West arrived at New York December 2, bringing 260 passengers and $737,000 in specie, with California dates to the 9th of November, brought down by the steamer Cortes.

Amongst the passengers are Senator Weller and Hon. J. A. McDougal, member of Congress.

The news from California is of but little importance. In commercial matters little or no change had occurred. No business had been done. Galego and Haxall flour closed at $12,50@12,75. Clear bacon 16 cents. Now hams 16½. Lard 17. Clear pork $22.

The mining news is of a favorable character.

The steam frigate Susquehannah was at Honolulu on the 20th Oct., and was hourly expected at San Francisco, as well as the Mississippi.

Her British Majesty's ship Amphitrite arrived at San Francisco on the 8th, and the British and French squadrons were expected to leave soon after the arrival of the next mail.

The vacancy in the supreme judgeship, occasioned by the death of Judge Wells, had not been filled by the Governor.

Various candidates were spoken of, the most prominent being Judge Fields of Marysville.

The steamship Sonora from Panama, arrived up on the 1st November.

The official returns of the recent State election are published, and show the combined democratic majority on the congressional vote to be 12,315.

The Mormons have been ordered out of San Francisco by the 1st May next.

Another insurrection had occurred among the State prisoners at Corte Madera. Nineteen attempted to escape, but were overpowered by the keepers, and one of them it was said was shot dead.

Mr. W. Sherman had been elected Comptroller of San Francisco.

The Alta Californian was urging the establishment of a stage and mail route across the plains.

Admiral Despointes had dispatched the French brig of war Obligado to Guaymas, San Blas and Acapulco, it is said with the object of prosecuting an inquiry concerning the death of Count Boulbon.

The citizens of Carson valley were urging an annexation of that place to California.

The Pioneer train on Adams & Co.'s Express for St. Louis, by the way of Salt Lake, started from Los Angeles on the 1st Nov. The attempt to re-open an overland express from Acapulco to Vera Cruz had been temporarily frustrated by the refusal of Alvarez and his party in Acapulco to grant passports to agents from that city through the country, under control of the revolutionists.

The arrival of overland emigrants were large, and they are thought to be nearly all in. Various encounters with the Indians are reported.

Marriages.

In Bath, Monday morning November 27th, by the Rev. Almon Gregory, CARL WOLF, of Buchenal, Grand Duchy of Baden, Germany, to ANNA CLEMENT, daughter of the late Schuyler Strong, Esq.

At Grove Bay, on the 16th of November, by the Rev. Jeremiah Porter, BYRON P. LINDSLEY, Esq., and Miss FRANCIS J. INGALLS, daughter of Jonathan Ingalls, all of that city.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Dec. 1, 1854.

THE cold storm has put a stop to all operations in the market, and there is nothing either bought or sold except for present necessities. The Canal is closed and the Railroad embarrassed, so that no produce is moving towards the Eastern market. We have quotations standing as last week, in absence of any transactions.

The money market still continues tight, and specie movements below the usual standard of weekly imports.

NEW YORK MARKET—Dec. 4.

FLOUR—Transactions in flour are to a moderate extent and prices are without important change. In the better grades there is rather more doing. We notice some export inquiry for good common brands. Sales $7,81½@8,12½ for common to straight State; $8,25@8,50 for choice, favorite and fancy do.; $8,25@15 common to good Ohio, Michigan and Wisconsin; $9@10,50 extra Ohio; $10,37½@11,50 do. Genesee. Only one or two well known brands commanded the outside price. Tuscarora in Canadian are limited at $8,62½ in bond, and $9,25@10 duly paid. Rye flour without important change. Demand small—sales of superfine at $5,50. Corn meal in fair supply, and dull at $4,44@50 for Jersey, and $4,75@81½ Brandywine. Buckwheat flour in good demand at $4,37½@50 per 100.

GRAIN—No important change in Wheat. Sales good white Canadian in bond on p. t.; fair white Southern at $1,93; good white Canadian at $2,10 duly paid. Rye is only moderate supply and firmly held at $1,31, or thereabouts. Not much inquiry for Barley, and market without important change. A sale of good four-rowed reported at $1,32. Corn much firmer; sales at 88@90c Western mixed delivered; 91c yellow Southern; 94@97c for round yellow. Oats in large supply and dull at 60@62c State; 54@55c Western.

PROVISIONS—Sales of mess Pork at $13,25½; $11,-31½@12 for prime; $14,25@37½ for clear, and $12,12½ for Ilda mess. Sales of Lard at 10@10½c for barrel, and 10¼@10½ for kegs. Butter sturdy; sales at 13@20c for Ohio, and 20@24 for State. Cheese steady at 10@11c.

ALBANY MARKET—Dec. 2.

FLOUR—Transactions this morning were confined to the supply of the home demand, and comprise but a few hundred barrels. Included in the sales were some small lots of extra Genesee at $11,12½. The bulk of the sales, however, were at the following ranges:—$8,62@9,25 for com. to good State and Western; $9,25@10,25 for good to fancy do.; $10,25@11 for extra Ohio and Genesee.

GRAIN—A cargo of 300 bushels Genesee wheat was sold at $2,37½. Barley meeted a little better. Sales about 9,000 bus. at $1,35@37½ afloat, for prime four-rowed, and $1,35, cash, for inferior do. Oats—52c for State.

NEW YORK CATTLE MARKET—Nov. 29.

At Washington Drove Yard—Offered for day 2,000 Beef Cattle; during the week 1,500. Prices—Beeves range from 9 to 10c per lb. Cows and Calves, $30, $40 to $75.—Veal Calves, $4 to 6. Swine, corn fed, $4,50@5,00. Sheep from $1,00 to 8. Lambs, $3 to 6.

At Brownlee's—At market, 641 Beef Cattle, 20 Cows and Calves, 20 Veals, 6,040 Sheep and Lambs. Prices—$8,-50@9,50 per 100 lbs. for Beeves; Cows and Calves range at from $30 to $60. Veals sold at from 6½@6c per lb. Sheep range at from $2,25 to $5,00. Lambs, $2,00 to $5,00.

At Chamberlain's—At market 699 Beeves, 104 Cows and Calves, 69 Veal Calves, 4,679 Sheep and Lambs.

Prices of Beef ranged at from $7,00 to $9,50 per 100 lbs. Cows and Calves at from $20 to $60. Veal at 5@6½c per lb. Sheep $2@5,00. Lambs $1,18@1.

1,000 YOUNG MEN

CAN readily make over 100 *per cent.* with a small capital, in a new, respectable, and easy business, to universal demand. This is no patent medicine nor book business. For full particulars address, post-paid.

251-2t COOK & CO., Detroit, Mich.

BOOK AGENTS WANTED,

IN every County in the Union, to sell THE UNIVERSAL HISTORY OF THE WORLD FROM THE CREATION TO THE YEAR 1750, by John Von Muller. Revised and brought down to the present time, by W. K. Murray, Esq. Complete in one royal octavo volume of over 1,000 pages. Elegantly illustrated with numerous engravings from original designs, by S. W. Rowse. Any comment respecting the fitness of Mr. Von Muller for the preparation of a work of this kind will be entirely superfluous, known as he is to the literary and scientific world. It will suffice to say that the mechanical execution of the work is every way worthy of the contents, and that the book is admirably suited to the wants of the American people.

"The value of this work, as a comprehensive historical manual, has been fully tested."—N. Y. Tribune

"We have seen no work of the kind so complete and admirable in all respects."—Providence Tribune.

Sold only by subscription. Good inducements offered to Agents. J. E. STICKNEY, Publisher,

257-3m No. 19 Washington St., Providence, R. I.

The Wool Grower and Stock Register is worth $10,00 a year to every one engaged in raising stock. It is furnished for fifty cents.—*Faculty Visitor.*

Advertisements.

ADVERTISEMENTS inserted in the RURAL NEW-YORKER at 16 cents a line, each insertion,—*to be paid in advance.*—Brief advertisements preferred, and we do not wish to give any one more than four successive insertions. Our space is limited, and we wish to accommodate and benefit as many applicants as possible,—at the same time interesting our readers by presenting something new, weekly.

☞ The circulation of this paper is several thousand greater than that of *any other* published in this State, out of New York city,—and we believe it largely exceeds that of any other Agricultural or similar journal (monthly, semi-monthly or weekly,) in either America or Europe.

20 FARMS FOR SALE IN ORANGE CO., VIRGINIA

THESE farms contain from one to seven hundred acres; are situated upon a Plank Road and R. Road. Price from five to fourteen dollars per acre. Good buildings, all necessary timber; a loam soil, clay sub-soil, adapted to grain or grass, really improved; the water and climate are good. Sheep do well here; are sustained without hay or grain.

C. J. WOODPORTH, Agent,
25t-11* Fredericksville, Orange Co., Virginia.

WANTED—MALE AND FEMALE AGENTS TO SELL IDA MAY

Throughout the United States.

This is one of the most intensely interesting stories of SOUTHERN LIFE AND MANNERS

that have emanated from the American Press. The commendations bestowed on this book are unanimous and *hearty*. Illiterate men of eminence pronounce it to be a perfect gem of art, while the general reader finds in the development of the plot the most absorbing interest. Up to the fifth day after publication the orders exceeded 14,000. And the increasing demand for the book, *especially where the first copies were sold*, leads the publishers to believe that the number of readers will be unlimited.

Active and enterprising persons, possessing small means, can make a profit of from $4 to $8 per day.

Circulars giving particulars in regard to terms, can be had by addressing the publishers, post-paid.

PHILLIPS, SAMPSON & CO., Publishers.
Boston, Nov. 25, 1854. 257-2t

THE HORTICULTURIST

And Journal of Rural Art and Rural Taste.

THE HORTICULTURIST is a Monthly Journal, devoted to HORTICULTURE and its kindred Arts, RURAL ARCHITECTURE, and LANDSCAPE GARDENING. It is edited by P. BARRY, the author of that popular work, *The Fruit Garden*, and for many years the Horticultural Editor of the *Genesee Farmer*. Mr. BARRY is universally acknowledged to be one of the best Pomologists in the world, and eminently fitted for this responsible station. He is aided by the best Horticulturists in the country.

ITS SIZE AND APPEARANCE.

THE HORTICULTURIST is a Magazine of forty-eight pages, without advertisements; and when Nursery and other advertisements are inserted, it is on a separate sheet, which can readily be removed before binding. It is printed on beautiful clear type, and on the finest paper, and ITS ILLUSTRATIONS ARE SUPERB, BOTH ON WOOD AND STONE. It is stitched in a neat and appropriate cover, and makes a volume at the end of the year of nearly 600 pages. Each number, in addition to numerous Wood Engravings, contains a *Frontispiece on Steel*, of some fine Fruit or Flower, *drawn and engraved from nature*, by the very best living Artists. These plates alone are worth more to every Fruit Grower than the cost of the work, enabling every one to judge not only of the appearance but the character of each, as every plate is accompanied with full and correct description. In addition to these are fine Elegant DESIGNS FOR COTTAGES, COUNTRY SEATS, SUMMER HOUSES, ARBORS, RUSTIC BRIDGES, &c. In short, nothing escapes notice that can make a Country Home pleasant and beautiful. While the *Horticulturist* is at least in appearance equal to any work published in the country, the publisher has the satisfaction of knowing that the best Pomologists and the Press both in this country and in Europe pronounce the HORTICULTURIST AND JOURNAL OF RURAL ART AND RURAL TASTE to be the *best Horticultural Journal in the world.*

Still further to add to the value of the work, and meet the impending hate and increasing wants of the Horticultural community, we also publish an Edition with COLORED PLATES, each number containing a full page engraving of some new, rare, and valuable fruit or flower, correctly colored from nature by the best living artists in this line.

ARRANGEMENT.

The first twenty-eight pages of this work is occupied with valuable papers by the Editor and correspondents.—These follow some six or eight pages of FOREIGN NOTICES, containing everything new and important in European Horticulture for the past month. Ten or twelve pages of EDITOR'S TABLE closes the number; and to the learned this department is a very valuable part of the work, as it contains simple and intelligible directions for the untutored in almost every department of GARDENING, given in answer to numerous inquiries.

TERMS—Two Dollars per year. Fifty Colored Plates, Five Dollars. A new Volume commences with the January number.

Agents are allowed 25 per cent. commission from our regular terms. The same commission to Clubs of four or more, making the price of Plain Edition only $1,50 to Clubs and Agents—and this is one of the most beautiful Magazines published.

☞ Specimen numbers sent free to all who wish to examine the work or obtain subscribers. Postmasters, Nurserymen, Fruit-growers, all who love FRUITS and all who love FLOWERS, all who would love to see "this wilderness blossoms as the rose," are requested to act as Agents. ☜

RARE CHANCE.

THE subscriber offers for sale the Farm on which he resides, situated in the town of Alden, Erie county, containing fifty-six acres, under a high state of cultivation, with a good wood lot, large and commodious buildings, an abundance of fruit, &c., &c. Also, from 25 to 40 acres of land in the town of Brandequit, a short distance from the city line. For further particulars inquire of the subscriber at his residence in Alden, or of C. S. BENJAMIN at the office of the Rural New-Yorker. (254) M. O. BENJAMIN.

ROCHESTER EYE AND EAR INFIRMARY.

DR. WALKER, Oculist and Aurist, (late of the Royal Ophthalmic Hospital, London, England,) continues to attend exclusively to the treatment of Diseases and all diseases of the EYE and EAR. Constant and extensive practice, enables Dr. W. to treat these cases with success seldom attained. (251-tf)

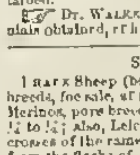
☞ Dr. WALKER may be consulted daily, and testimonials obtained, at his office, 52 State St., Rochester, N. Y.

SHEEP FOR SALE.

I HAVE Sheep (both Bucks and Ewes,) of the following breeds, for sale, at reasonable prices,—French and Spanish Merinos, pure bred; also, crosses of the two breeds, from ¼ to ¾; also, Leicester and South-Downs, pure bred, and crosses of the same. These Sheep are from, or descended from the flocks of the well-known breeders of pure bred Sheep, Messrs. Jewett, Burrill, Avery, Wakeman, M'Intyre, Brodie, &c. For further particulars address me (post-paid,) at Belleville, Jefferson Co., N. Y.

262-3mcow E. G. COOK.

TRUNKS AND VALISES.



THE subscriber would inform the citizens of Rochester and the public generally, that he is manufacturing extensively, a very superior article of sole leather and steel spring Trunks, which he will guarantee to be equal to anything made in the United States.

You may see at PRITCHARD'S Trunk Depot and Sales Room, 78 State street, 1650 Trunks and Valises, and he is now adding to this large stock from 125 to 150 per week—among which you may find Trunks varying from one dollar to fifty. If you should want anything in his line, give him a call, for his motto is, "Large sales and small profits."

A. R. PRITCHARD, No. 78 State St.
Rochester, N. Y., Aug., 1854. 240-tf

BUFFALO SEED AND AG'L WARE-HOUSE,

No. 196 Main street, Buffalo, N. Y.

EGERY'S Horse-Powers, Threshers and Separators, Seymour's, Pennock's and Ross' Grain Drills, Hickcock's and Bailey's Cider Mills,

Together with a full assortment of Hay Cutters, Plows and other implements, always on hand, at lowest market rates.

N. B.—Country dealers supplied on liberal terms.

MOORE'S RURAL NEW-YORKER has become a giant among its kind. With a subscription verging fast to 30,000, and with a conductor who knows how to polish it with every grace of the art, and how to accomplish it with the best talent of the age—it is not surprising that it is now the leading agricultural paper of the country.—*Christian Adv.*

We have frequently commended the *Rural New-Yorker* that an attempt to add thereto would be like "lending paint into to the rose." In our opinion it is the best Agricultural, Literary and Family paper extant.—*Pa. Herald & Whig*

THE RURAL FOR 1855.

PREMIUMS FOR SUBSCRIBERS:

ONE HUNDRED DOLLARS for the largest list of Yearly Subscribers to the RURAL NEW-YORKER—the payment to be installed according to our Club terms, previous to the 1st day of February, 1855.

EIGHTY DOLLARS for the next (second) largest list, as above specified.

SEVENTY DOLLARS for the third list.
SIXTY DOLLARS for the fourth list.
FIFTY DOLLARS for the fifth list.
FORTY DOLLARS for the sixth list.
THIRTY DOLLARS for the seventh list.
TWENTY-FIVE DOLLARS for the eighth list.
TWENTY DOLLARS for the ninth list.
TEN DOLLARS to each of the *five* persons sending the 10th, 11th, 12th, 13th, and 14th lists, as above.

FIVE DOLLARS to EACH of the *five* persons sending the 15th, 16th, 17th, 18th, and 19th lists.

THREE DOLLARS to EACH of the *six* persons sending the 20th, 21st, 22d, 23d, 24th, and 25th lists.

☞ We also offer the following very liberal list of

CHRISTMAS CASH PREMIUMS.

FIFTY DOLLARS for the largest list of subscribers to the RURAL NEW-YORKER, sent in or mailed according to our terms, on or before the 25th day of December ensuing, (1854.)

THIRTY-FIVE DOLLARS for the next largest list, as above.

TWENTY-FIVE DOLLARS for the next list.
FIFTEEN DOLLARS for the next list.
TEN DOLLARS for the next list.
FIVE DOLLARS for the next list.

☞ Persons competing for Christmas Premiums are not excluded from the February prizes, so that one person may receive *One Hundred and Fifty Dollars*, in *Cash*!—another *One Hundred and Fifteen Dollars*, &c.

[In order to give Post Masters, Local Agents, &c., a fair and equal chance, traveling agents, postmasters and citizens of Rochester are excluded from competition for any of the above Premiums.]

SPECIFIC PREMIUMS.

In order to REWARD EVERY PERSON who may aid in extending the circulation of the RURAL NEW-YORKER, we offer to such as do not compete for any of the preceding Premiums, the following liberal gratuities for subscribers forwarded *previous to the 1st of April*, 1855:

THREE DOLLARS, IN BOOKS, to a handsomely bound volume of the RURAL for 1854, for TWENTY subscribers.

To every one remitting for twenty copies ($25,) an extra copy of the RURAL and either volume of the WOOL GROWER AND STOCK REGISTER—*or*, THE HORTICULTURIST for 1855.

The same premium to every one remitting for FIFTEEN copies, ($20,)—for TEN copies ($15.)

To every one remitting for six copies ($10,) an extra copy of the RURAL, or the HORTICULTURIST for 1855.

For $5 we will send THREE copies of the RURAL, and either vol. of the WOOL GROWER AND STOCK REGISTER.

For $4 we will send one copy of the RURAL, and either *Putnam's, Harper's, the Knickerbocker, Lady's Book*, or *Graham's Magazine* for one year.

For $3, we will send a copy each of the RURAL and the HORTICULTURIST for 1855.

All competitors for premiums are expected to adhere strictly to the following

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR. *Three Copies*, one year, $5—*Six Copies for* $10—*Ten copies for* $15—*Fifteen Copies for* $20—*Twenty Copies for* $25, *and any additional number at the same rate.* ☞ *As we are obliged to pre-pay American postage, our lowest Club price to Canadian subscribers is* $1,50 *per copy.* ☜ *To facilitate mailing, we prefer sending Club papers to one address at each post office, but the names of subscribers will be written on the papers if desired. Club papers sent to different post offices, and names can be sent in at different times. Bills of all specie paying Banks received at par on subscription.*

☞ Specimen numbers, show-bills, prospectuses, &c., sent free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE,
Oct., 1854. Rochester, N. Y.

THE INDEPENDENT.

The Largest Religious Paper in the World!

Edited by Pastors of Congregational Churches in New York and vicinity.

Among the contributors to its columns are
Rev. HENRY WARD BEECHER,
Rev. GEORGE B. CHEEVER, D. D.,
Mr. CHARLES L. BRACE,
Mrs. HARRIET BEECHER STOWE,
and many other celebrated writers.

CORRESPONDENTS

from all sections of the Union, from England, France, Germany, Switzerland, Italy, and the Holy Land, contribute to enrich the columns of THIS JOURNAL.

In addition to its being the largest, it is also the cheapest religious paper in the world, and being published solely with the view of advancing the cause of religious truth, it is sold at the *cost price*. Its proprietors are entirely independent of the paper as a means of support, (being engaged in mercantile business) and are determined to spare no expense to make it one surpassed either in the variety, richness, or extent of its matter; it will be sold on the following

TERMS—$2 per annum by mail, if paid *in advance*. Orders for the paper, accompanied by the money, addressed to the publisher, and prepaid, will be considered at our risk.

NOW IS THE TIME TO SUBSCRIBE,

Whether you wish for the paper immediately, or at a future date. We are daily receiving subscriptions to begin January 1, 1855. Those who wish to commence then should send in their names early, and thus insure the reception of the first numbers of VOLUME SEVENTH.

Our circulation, never so large as at present, is increasing at the rate of

TWO HUNDRED AND FIFTY TO THREE HUNDRED A WEEK!!!

AGENTS.—Clergymen are authorized Agents, and are solicited to engage in the work of extending our circulation. For every five *new* names they may send, with ten dollars, we will forward a *sixth* copy gratis for one year.

JOSEPH H. LADD, Publisher,

"Put none but Americans on Guard to-night."

KNOW-NOTHINGS!! AMERICANS!!!

THE BOOK FOR ALL OR FOR NOT.

"The Know-Nothing Token," A Wide-Awake Gift For 1855,—Edited by "One of 'Em."

The following distinguished American Writers, on American Subjects, adorn the pages of this truly AMERICAN BOOK:

W. C. Bryant, J. G. Drake, R. W. Emerson, Mrs. L. H. Sigourney, the Hon. J. W. Savage, F. S. Key, Dr. Thomas E. Bond, Joseph Hopkinson, H. W. Longfellow, H. Fuller, L. C. Levin, H. F. Gould, the Hon. Daniel Webster, Grace Greenwood, E. Everett, T. Dwight, John M. Mason, John Pierrepont, De Witt Clinton, H. C. Simms, E. P. Whipple, J. G. Percival, L. C. Levin, O. W. Holmes, Erastus Brooks, W. H. Gallaghee, E. H. Chapin, the Hon. George Bancroft, W. H. Burleigh, the Hon. Caleb Lyon, G. Melville, L. McLellan, Jr., J. G. Whittier, Chief Justice Marshall, E. Oakes Smith, B. T. Paine, Jared Sparks, Seba Smith, Andrew Jackson.

WITH FIFE ELEGANT STEEL ENGRAVINGS.

Viz., "The Marriage of Washington," "Goddess of Liberty," "Portrait of Washington," "Portrait of Daniel Webster," "Spirit of '76," "Portrait of Martha Washington." Together with "Washington's Farewell Address," "Constitution of the United States," and the "Declaration of Independence."

The following are a few of the strong recommendations of the Press:

The getting up of this nice volume was a happy thought. It awakens and invigorates the coolest patriotic sentiments, and, withal, fortifies patriotism by Bible religion. The volume opens with Washington's Farewell Address, among the richest legacies ever bequeathed by a patriot upon his country; and then follows, in prose and poetry, the happiest and most soul-stirring appeals to the reason and heart of Americans, warning them of the danger of foreign influence adverse to their free institutions, and exciting to sleepless vigilance to their perpetuation.

The book gives a clear exhibition of what the "Know-Nothings" are; shows the necessity for such an association; and excites an earnest hope that they may be preserved and prospered as the life-guard of civil and religious liberty.—*Christian Advocate and Journal.*

This is a sterling annual, full of living truth which must be commended by every editor who is not a fossil at heart, and find a response in the soul of every lover of American soil and institutions. Every page in it is of sterling value, and should be committed to memory, and handed down from father to child. The matter in such a book is its own best adornment. Washington and all the worthies following after him, here speak to the living present, and poets of the soul set to glowing measure the glories of our Protestant birthright.—*Albany Spectator.*

The whole making one elegant 12mo. volume. Price $1. The same in full gilt, sides and edges, $1,50. For sale by booksellers generally.

Copies sent by Mail, on receipt of price.

J. C. DERBY, Publisher, No. 119 Nassau St., N. Y.

Poetical.

HOME AND FRIENDS.

BY CHARLES SWAIN.

Oh, there's a power to make each hour
As sweet as heaven designed it,
Nor need we roam to bring it home,
Though few there be who find it;
We seek too high for things close by,
And love what nature found us;
For life hath here no charm so dear
As home and friends around us.

We oft destroy the present joy
For future hope, and praise them;
While flowers as sweet bloom at our feet,
If we'd but stoop to raise them;
For things afar still sweeter are,
When youth's bright spell hath bound us;
But soon we're taught that earth was nought
Like home and friends around us.

The friends that speed in time of need,
When Hope's last reed is shaken,
To show us still, that, come what will,
We are not quite forsaken;
Though all were night, if but the light
From Friendship's altar crowned us,
'Twould prove the bliss of earth was this—
But homes and friends around us.

Rural Sketch Book.

MILLIE LEE.

BY CLEMENT E. BLAIR.

"There," said a friend to me one day, "there goes a heroine." I looked around but seeing only a little girl, trudging barefoot along the road, with a basket almost as large as herself, I turned my eyes with a glance of inquiry to the speaker. He answered it by pointing to the unromantic object just described. "I mean her, Millie Lee. You think she is only a poor, shoeless, stockingless child; but I tell you she is a heroine, with a nobler heart than ever beat in the bosom of Joan of Arc, or Margaret Anjou."

My friend was not accustomed to talk at random; hence my curiosity was excited, and I drew from him as we sat in the shade to rest, this history of Millie Lee.

Five years ago there came to our village, a laborer named Thomas Lee. He was idle and intemperate, his wife feeble, and heart-broken, their children so pale, so hungry, and so sickly looking, that it made my heart ache to look at them. They had been born beneath the shadow of a father's neglect—a mother's hot tears had fallen on their faces as they drew nourishment from her breast, and lay upon her breaking heart. How could they be like other children? On the desert shrub, every new leaf tells by its premature scarness, of the arid sand in which its roots are withering. Hence those children never played or smiled. They crept about so still and sad—they ate their hard dry crusts, with such a melancholy look, that you would have thought that their home must have been a house of death. And so it afterwards was. Their father would lie for hours as one dead!—dead to all the beauties of nature, to all the activities of the world, to all the nobility of nature, that he was burning to a cinder of everlasting remorse, with the fires of rum. Often have I accosted those children, crouching together by the door of their home, and tried to draw from them a smile; I gave them food when I knew they were very hungry, and they would thank me sweetly; but not a gleam of sunshine would pass over their faces. They were grateful, but could not be gay.

We tried to do something for his family, but the wretched father would not let any of them leave him, and would squander for rum, or destroy for spite, whatever we gave them. He had a great deal of manlike independence, and our kindness he scornfully refused as an official interference with his affairs. Hence we could only carry food to his starving wife and children while he was at the dram-shop.

At last Mrs. Lee died. Never saw I such a scene before, and God in mercy save me from ever seeing the like again! Lee was rolling on the floor, too drunk to understand what was going on, or even to rise. But his tongue was loose, and he accompanied the groans of his wife, and sobs of his children, with snatches of ribald songs and curses that made my blood curdle in my veins!

I need not dwell upon the funeral. We managed to keep Lee sober until his poor wife was under the ground. But he seemed to have little feeling; he went to the church and to the grave, like a man stunned or in a dream. We left the family at night, with everything necessary for their comfort, intending to provide homes for the children next day.

In the morning, having made our arrangements, we went early to the cabin. We heard as we approached, a discord of mingled curses, screams and blows. We entered, and there was Lee, in a drunken rage, with a poker in his hand. He had driven the children into one corner, and before the younger ones stood Millie, covering them as a hen covers her brood, and meeting the eye of her father with such a look of reproach and sadness that, demon as he was, he quailed beneath it. After we had gone away the night before, the wretched man had stolen out to one of those low dens, where they would sell rum to a grinning skeleton if it had only three cents in its hand. There, pawning the clothes that had been given him for the funeral, he prepared himself for the scene we witnessed.

Having disarmed him, and released the trembling orphans, we insisted upon taking them all away. Millie said we might take Sally, and Georgy, and the baby; but she would stay, for, since mother was dead, there was nobody else to look after father.

"But, Millie, he will beat you, he will kill you!"

"Maybe he will, sir," she answered, "but yet I must not leave him. He gets drunk, I know, and then he is cross; but still, he is my father."

I looked with wonder on that feeble child. I thought of all she had suffered from that brutal man, who had never smiled even on her childish prattle. I thought of all she had yet to fear from him alone in that cabin, and felt that no recorded instance of female heroism exceeded hers. We reasoned, and we pleaded; but Millie was firm. We were obliged to leave her, but with numerous and foreboding.

We heard nothing from her until the next day. Then she ran up to see the baby, which was at my house. I asked her, "how are you getting on at home now, Millie?"

"Pretty well, I thank you," was her reply.

"Did your father get drunk last night?"

She tried to keep back the tears as she answered:

"He came home very cross, sir."

"Did he beat you, Millie?"

"Oh, not much. He only struck me twice, and once it was nothing but his hand."

"And the other? yes, I see, it was with the poker, and he made a deep gash in your head! You must not stay there, Millie."

"Oh, sir, it did not hurt me much, and when he saw the blood, it seemed to sober him a little, and he threw down the poker, and told me to wash my face and go to bed. And after I was in bed, he sat by the fire, and muttered to himself, and by what I heard I knew that he felt sorry because he struck me, and I don't think he will do so again."

Poor, patient, loving, hopeful Millie Lee!—She kissed the baby, and hurried back to get some supper for her father.

That night I was out late. I returned by Lee's cabin about eleven o'clock. As I approached I saw a strange looking object cowering under the low eaves. A cold rain was falling. I drew near, and there was Millie asleep, wet to the skin. Her father had driven her out some hours before; she had lain down to listen to the heavy snoring of his drunken slumbers, so that she might creep back to bed. But before she heard it nature became exhausted, and she fell into a troubled sleep, with the rain drops pattering on her. I tried to take her home with me, but no, true as a martyr to his faith, she struggled from my arms, and returned to the now dark and silent cabin. Things went on so for weeks and months.—But at length Lee became less violent, even in his drunken fits, to his self-denying child; and one day when he awoke from the heavy slumber of a debauch, and found her preparing breakfast for him, and singing a sweet childish song, he turned to her and with a tone almost tender, said:

"Millie, what makes you stay with me?"

"Because you are my father, and I love you."

"You love me!" repeated the wretched man; "love me!" He looked at his blotted limbs, his soiled and ragged clothes; "Love me," he still murmured.

"Millie, what makes you love me? I am a poor drunkard; every one else despises me.—Why don't you?"

"Dear father," said the little girl with swimming eyes, "mother taught me to love you; and every night she comes from heaven, and stands by my little bed, and says: "Millie, don't leave your father; Millie, love your father. He will get away from that rum-fiend one of these days, and then how happy you will be."

Lee buried his head in his hands, and tears, the first for a long time, trickled through his fingers. He said no more; but having eaten his breakfast went out. That night he came home sober—the first time for many years.—He gave her a dollar that he had earned, and talked with her kindly, until it was time to go to bed.

O! how light and glad was the heart of Millie Lee. For hours she lay awake and wept for joy. After she fell asleep, the angel came to her in her dreams; and O, how sweetly her mother smiled. Next morning she exerted her childish skill, to prepare a nice breakfast for her father. She sang and prattled with a light heartedness she had never known before; and Lee gazed with something like a parent's pride and fondness on her. He went out to work, and at night—late at night, after the poor child had waited for long—long hours, he reeled home drunk. O, what a bitter disappointment. It almost crushed her. But the angels came again and whispered, "Courage, love never faileth," "hope never faileth," and that night she was repaid by the early return of her father in his right mind.

We learned afterwards that the rumseller, when Lee tried to reform, would waylay him coming from his work, and entice him back to the den of death. If the tempter found him, he would yield and fall. Otherwise he would return home a sober man—a kind father to his motherless and loving child. Her patience and cheerfulness were unsealing the fountains of his heart, and had there been no human spider to spread a snare for his feet, he would then have been restored. But alas! over and anon, the meshes were too skilfully woven and too strong.

"And is he still a drunkard?" I asked.

Wait a moment—my tale is nearly told.—Millie heard one day, of Mr. Durland, the eloquent reformed drunkard of Westville. At once she concluded that he could save her father. So, without a word to any one, she set off, as soon as her father had gone to his work, and walked the whole six miles to Westville. She sought out the lecturer; she told him her artless, touching story. He came back with her and took his seat in the cabin, and sent Millie to bring her father from his work. Mr. Durland knew how to accost him, how to advise and encourage him, for he had gone through the same fiery ordeal and fully conquered the appetite for rum. While he, (Washingtonian and drunkard) talked, Millie listened and prayed. She thought she heard a rustling as of an angel's wings in the cabin, and as the sunbeams played upon the wall, she imagined it was her mother's smile of love and hope! That night her father signed the pledge, and by the help of kind friends, he has kept it to this day.

It is now six months since that memorable night, and though they live in the same cabin still, and are poor, there is not a happier, nobler heart, than beats in the breast of Millie Lee. What do you think now of my heroine?"

"She deserves a higher name than that," I answered. "She is an angel!" And as I looked at the delicate child, carrying her basket along the dusty road, I thought how many an embryo cherub may be tramping along the paths of human poverty and scorn, and how we shall wonder at the revelations there are yet to be, when the tinsel shall fall from the false greatness of the earth, and its true nobility shall rise to shine forever in the holy light of heaven.

WASHINGTON'S FISHERMAN.

Washington ceased to be a sportsman after 1787, when he gave up the hunting establishment. True he had bred the blood horse, and a favorite colt of his, named Magnolia, was entered and ran for a purse; but this was more to encourage the breeding of fine horses than from any attachment to the sports of the turf. All the time that he could spare for active exercise in his latter days was devoted to riding about his farm and inspecting his improvements. In this he was ably assisted by several of his stewards and managers, who were Europeans, and who had brought from their own countries, habits of industry and knowledge of improved agriculture and rural affairs, so that, had the farmer of Mount Vernon been spared but a few years longer, his estate would have exhibited a series of model farms, examples to neighboring improvers and to the country at large.

Mount Vernon in the olden time was celebrated for the luxuries of the table. The fields, the forest, and the river, each in their respective seasons, furnished the most abundant resource for good living. Among the picturesque objects on the Potomac to be seen from the eastern portico of the mansion-house, was the light canoe of Father Jack, the fisherman to the establishment. Father Jack was an African negro, a hundred years of age, and although greatly enfeebled in body by such a vast weight of years, his mind possessed uncommon vigor. And he would tell of days long past, of Afric's clime, and of Afric's wars, in which he (of course the son of a king) was made captive, and of the terrible battle in which his royal sire was slain, they consigned to the flame, and he to the slave-ship.

Father Jack possessed in an eminent degree the leading quality of all his race, somnolency. By looking through a spy-glass you would see the old fisherman, bent nearly double, enjoying a nap, which was only disturbed by the hard jerking of the white perch that would become entangled with his hook.

But the slumbers of father Jack were occasionally attended by some inconvenience.—The domestic duties of Mount Vernon were governed by clock time. Now, the cook required that the fish should be forthcoming at a certain period, so that they might be served smoking on the board precisely at 3 o'clock.—He would repair to the river bank and make the accustomed signals; but, alas, there would be no response; and the old fisherman was seen quietly reposing in his canoe, rocked by the gentle undulations of the stream, and dreaming no doubt of events "long time ago." The unfortunate artiste of the culinary department, grown furious by delay, would now rush down to the water's edge, and, by dint of loud shoutings, at length the canoe would be seen turning towards the shore. Father Jack indignant at its being even supposed that he was asleep on his post, would rate those present on the landing with, "What you all mean such a debil of a noise for, hey; I want sleep, only nouldin'."

Poor Father Jack! no more at early dawn will he seen, as with withered arm he paddled his light canoe, on the broad surface of the Potomac, to return with the fancy spoils, and boast of his famous fish taken "on his own hook!" His canoe has long since rotted on the shore, his paddle hangs idly on his cabin, his "occupation's gone," and Father Jack, the old fisherman of Mount Vernon, "sleeps the sleep that know no waking."

A hunter, too, was attached to the household establishment. Tom Davis and his great New Foundland dog, Gunner, were as important characters in the department of furnishing game and wild fowl as Father Jack in that of fish. So vast were the numbers of the canvas-back ducks on the Potomac in the ancient time, that a single discharge of 'Tom Davis' old British musket would procure as many of those delicious birds as would supply the larder for a week.—*Custis.*

The Farmer.—It does your very heart good to see a merry, fat, round-faced farmer—an independent, and yet so free from vanity and pride; so rich, and yet so industrious—so patient and persevering in his noble calling, and yet so kind and obliging. There are a thousand noble traits about his character which are rarely met with in city life. You may eat and drink with him, and he won't set a mark on you and swear it out of you with compound interest—he is hospitable. He will do you kindness without expecting a return by way of compensation—he is generous; not so with everybody. He is generally more honest and sincere, and gives society its best support—is the firmest pillar that supports the edifice of government—he is the lord of Nature. Look at him in his "home-spun grey" frock—gentlemen! Laugh at him if you will—but believe us, he can laugh back, if he pleases.

Be always frank and true; spurn every sort of affectation and disguise. Have the courage to confess your ignorance and awkwardness. Confide your faults to but few.

With love, the heart becomes a fair and fertile garden, glowing with sunshine and warm hues, and exhaling sweet odors; but without it, it is a bleak desert covered with ashes.

HONOR THY MOTHER.

"Come on, boys; come on boys!" shouted Harvey B. to a group of his playmates.

"Where! where!"

"Let's go down to the river and have a good skate; I'll show you how to cut your names scientifically."

"Yes, come on! let's go! let's go!"

"Where are you going, Millard?"

"I am going home."

"Come on, don't back out."

"I dare not go without the consent of my mother."

"Coward! coward! coward!" cried the boys.

"I would not be such a child as to ask my mother to permit me to go where I wanted to!"

"I'm not a coward!" replied Millard, his eyes flashing, and his manly form erect; "I'm not a coward! I promised my mother I would not go where there was danger, without first obtaining permission from her."

"He is right," said George, "I am going with him to ask my mother also."

"You can wait, or go on, as you choose," said Millard; "I am going immediately, and if she consent I'll join you;" and he turned on his heel and walked off with George.

"Let them go," cried Harvey; "They're the milk sops," were the brave, and he ran towards the river followed by all of the boys.

It was early in spring, and the sun was thawing the ice very fast, which made it dangerous to go on it, and for that reason Millard would not go.

Harvey was a bad boy; he respected neither his father nor his mother; he prided himself on his manliness, smoked segars, and was coming on very fast.

Millard respected his mother, obeyed her in all things, loved all his playmates and feared God.

How many Millards and Harveys I wonder there are who read the Sun every week? I think not many Harveys.

Dear boys! do you always obey your mother? Do you respect her? If I were to say you did not love her, you would be very much shocked, would you not? Well, you must prove your love by obeying her always.

As soon as a boy thinks he is too old to obey his mother, scorns her counsel, smokes segars, runs with fire companies, stands at corners making remarks on all who pass then it is all up with him. I would not think much of him, but pity him and think of his poor mother, his wasted youth and unhappy old age.—Many a ruined man looks back to the time when he first disobeyed his mother, when he was tempted to do wrong, as the stepping-stone to all his misery. If you have the moral courage you will never fear to be called a coward. The real coward, is he who disobeys his mother from fear of ridicule.—*Philadelphia Sun.*

Wit and Humor.

The editor of the Kenosha (Wis.) Telegraph, says:

"Last year we had a tree which bore one apple. This year the crop of the tree has doubled." We think the nature of the tree must have been totally changed, as it is certainly the first instance that we remember of any tree bearing one year an apple, and the next year a *pair.*

Decidedly Rich.—Speaking of the recent appearance of the sea serpent near Donkirk, N. Y., the Journal of that place says:—"We are also told that several of our fishermen have long been impressed with the idea, *from actual observation*, of the existence of some imaginary monster in the waters of the lake."—Very few persons are favored with actual observation of *imaginary* monsters.

The last number of the Revue des Deux Mondes, contains an article on Thackeray, by M. Forgues. In the course of it, he mentions the novelist's cynical exclamation, when he found "Esmond" eclipsed by "Uncle Tom's Cabin," "I forgot to put a nigger in my novel."

The principal of an academy, in his advertisement, mentioned his female assistant, and the "reputation for teaching which she bears;" but the printer (careless fellow) left out the "which," so the advertisement went forth, commending the lady's "reputation for teaching *she bears!*"

An imaginative Irishman gave utterance to this lamentation:—"I returned to the halls of my fathers by night, and I found them in ruins! I cried aloud, 'My fathers, where are they?'—and echo responded, 'Is it you, Patrick M'Glathery?'

A man says the first thing that turned his attention to matrimony, was the neat and skillful manner in which a pretty girl handled a broom. He may see the time when the manner in which the broom is handled, will not afford him satisfaction.

A rowdy, intending to be very witty thus accosted a lady in the street:—"Madam, can you inform me were I can see the helephant?" "No, sare," said the lady, "but if I had a looking-glass I could show you a very large monkey." The rowdy slid.

Marry a pint of rum to a lump of sugar, and in less than an hour there will spring from the union a whole family of shillelahs and broken heads. The marriage ceremony can be performed with a toddy-stick.

At military funerals in California, it is said to be the practice, after burying the dead, to have the band go back to the residence of the deceased and serenade the widow.

Youth's Corner.

ILLUSTRATED REBUS, NO. 49.

☞ Answer in two weeks.

[Written for Moore's Rural New-Yorker.]

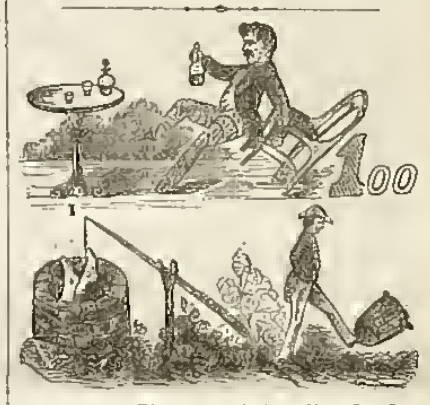
MISCELLANEOUS ENIGMA.

I am composed of 30 letters.
My 28, 3, 12, 24, 19, 2 is what all desire.
My 7, 10, 1, 29 is used on farms.
My 14, 15, 18, 6, 1, 18, 16, 7 is an art.
My 8, 13, 5, 19, 3 is a musical instrument.
My 21, 14, 29 is a quadruped.
My 11, 24, 26, 23 is a part of the human frame.
My 22, 25, 27, 12, 16, 1 is not filled.
My 4, 15, 26, 29 is a coin of Genoa.
My 9, 3, 17 is a color.
My 20, 15, 14 is a kind of juice.
My 30, 14, 11, 9 is sharp.
My whole is stupendous and beautiful to behold. I. P. T.

☞ Answer next week.

Enigma.—My whole is eagerly sought after by all, yet the wise man will love me most when the penultimate letter is elided from my name.

☞ Answer next week. T.



Answer to Illustrated Rebus No. 47.—*I understand a drunken man falling 100 feet in a well, kicked the bucket in the bottom.*

Answer to Miscellaneous Enigma in No. 48.—*A prophet has no honor in his own country.*

Answer to Charade in No. 48:

The *Sea* is crossed all o'er and o'er by help of needle fine,
The yellow, red, and black and white—and there you cross the line
You see its waters blue and green. The second is a *Son*,
Which all men are of women born—yet so unborn was one,
For Adam was ere woman was; thus every man on earth,
Beggar and king, a mother had to whom he owed his birth.
Join *Sea* and *Son*—you *Season* make, which varies everywhere,
As climate or as weather makes, and is or foul or fair;
'Tis hot, 'tis cold, 'tis wet, 'tis dry; fish, flesh, fowl, love and hatred
Even prose and rhyme are sometimes in and sometimes out of *Season*.

KEDZIE'S RAIN WATER FILTERS.
MANUFACTURED BY
J. E. Chaney & Co., Rochester, N. Y.

The use of water impregnated with lime and other mineral substances, is, in the opinion of all medical men, is one of the chief exciting causes of many diseases incident to the varied climate of this country.

These Filters have been fully tested, for many years, by hundreds of families in this city and in various parts of the country, and have in all cases given the highest satisfaction.

Rain water, of whatever color, taste, or smell, by this means becomes as clear as crystal. 136-1amtf

☞ Mr. C. Moore, of Gerry, Chau. Co., is authorized to act as Agent for the Rural New-Yorker, and for the Wool Grower and Stock Register, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

MOORE'S RURAL NEW-YORKER,
IS PUBLISHED EVERY SATURDAY,
BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 6¼ cents per quarter, payable in advance, to any part of the State—and 6¼ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

EXCELSIOR.

AGRICULTURE. HORTICULTURE. MECHANIC ARTS. LITERATURE. SCIENCE. ARTS.

VOLUME V. NO. 50. ROCHESTER, N. Y.—SATURDAY, DECEMBER 16, 1854. WHOLE NO. 258.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANTS AND CONTRIBUTORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for 6 months, in advance. For reduction to Agents, and those who form Clubs, see notice on last page.

ADVERTISEMENTS,—If brief and appropriate, will be inserted at 16 cents a line, each insertion. ☞ No Patent Medicine, or deceptive advts. published on any terms.

Rural New-Yorker.

Progress and Improvement.

STUDY THE SOIL YOU TILL.

THE past season of great drouth has undoubtedly developed many interesting facts in regard to the hygroscopic and retentive power of soils, which, if farmers could only be induced to record them, would greatly extend our knowledge of this interesting but neglected branch of scientific agriculture. Chemists who in too many cases have been investigating agricultural phenomena by *deductive* methods *alone*, now manifest an inclination to abandon their inglorious pursuit, and to walk slowly and cautiously, hand in hand, with practical farmers. They have given up the attempt to revolutionize the system of agriculture, based on experience; and no longer pretend, by the aid of an analysis, to dictate to a farmer a thousand miles away, what his sick soil needs to cure it, and make it produce immense crops at little expense. They are satified that they, themselves, are still much in the dark in regard to what constitutes a fertile soil, and are willing to listen to what practical, observing farmers have to say on the subject. We anticipate much good from this change in the direction of chemico-agricultural investigation; being satified that if the chemist and farmer would only work harmoniously together, they would soon clear up much of the uncertainty at present attending many of our agricultural and horticultural operations. The duty of the farmer is to record every fact coming under his observation; that of the chemist to search after the *cause* of the phenomenon. Chemists are now ready, we are convinced, to do what they can; *will the farmers help them?*

We are particularly desirous of ascertaining facts concerning the influence of drouth on different classes of soils; also as to the effect of peat, plowing in clover, deep plowing, underdraining, &c. While we can hardly be said to have paid *too much attention* to the simple *elements* of plants which a soil contains, we may safely aver that we have given far too little attention to the mechanical condition of the soil; to its power of absorbing moisture and fertilizing gases from the atmosphere, to its *retentive and capillary* powers, and to the quantity of water required to saturate it. Led away by the delusive fascinations of the "Mineral" and "Special" manure theories, we have neglected for the past ten or fifteen years to study these characteristics of soils; and, indeed, many writers at the present day appear to have forgotten that soils have any such qualities.

It is known that soils which contain much *humus* or decayed vegetable matter, have great power in drawing moisture from the air. It might be supposed, therefore, that an application of peat—which contains much humus—would prove beneficial in a dry season on sandy soils. Has such been the case? Clay, too, possesses this power to a great extent, but it should be well pulverized in order to allow the air to permeate through it. Pure sand does not possess the power at all; and yet sandy soils which contain a little clay and humus, often suffer less from drouth than tenacious clays, owing doubtless to their permeability. Sir HUMPHREY DAVY says: "The soils which are most efficient in supplying the plant with water, by atmospheric absorption, are those in which there is a due mixture of sand, finely divided clay, and carbonate of lime, with some animal or vegetable matter; and which are so loose and light as to be freely permeable to the atmosphere. With respect to this quality, carbonate of lime and animal and vegetable matter are of great use in soils; they give absorbent power to the soil without giving it tenacity. Sand, on the contrary, which also destroys tenacity, gives little absorbent power. I have compared the absorbent power of many soils with respect to atmospheric moisture, *and I have always found it greatest in the most fertile soils*; so that it affords one method of judging of the productiveness of land." There is a rich field open for investigation in this direction.

The quantity of water required to thoroughly saturate the various earths, is a question of much importance. SCHUBLER found that a cubic foot, when thoroughly saturated, contained of water as follows:—Silicious sand, 27.3 lbs.; gypsum powder, 27.4; calcareous sand, 31.8; carbonate of lime, 47.5; fine slaty marl, 35.6; pure grey clay, 48.3; stiff clay or brick earth, 45.4; garden mould, 48.4. The fact that "garden mould" imbibed more water than any other soil, and the poor "silicious sand" the least, indicates that rich soils are less easily saturated than sterile ones. Here, too, is a fine field for study.

The power of retaining water, when exposed to the atmosphere, is also known to differ materially in the several earths. SCHUBLER found, calculating the evaporation as from 100 grains of water contained in the earth, that 200 grains of earth, spread on a surface of ten square inches, at a temperature of 65°.0, evaporated in 4 hours as follows. Silicious sand, 88.4 grains; calcareous sand, 75.9; gypsum powder, 71.7; sandy clay, 52.; loamy clay 45.7; stiff clay or brick earth, 34.9; pure grey clay, 31.9; fine lime 28; garden mould, 24.3; magnesia, 10 8;

Our space will not allow us to comment on these results, or to pursue the subject further at this time, but we would commend their study to every farmer, and especially to every farmer's son. Do not forget, moreover, to let us have the results of your observations during the past year.

SALT IN FEEDING CATTLE.

From some slight and inconclusive experiments of our own, as well as from physiological considerations, we have had our doubts whether it was good economy to allow animals, *feeding for the butcher*, the free use of salt. Salt is doubtless conducive to health, favoring the formation of bile, and aiding in carrying effete matter from the system; but there is no reason to suppose that it favors the accumulation of fat. LIEBIG, indeed, asserts that "*the absence of common salt is favorable to the formation of fat*," and that the "fattening of an animal is rendered impossible, when we add to its food an excess of salt, although short of the quantity required to produce a purgative effect." Recently, however, in allusion to experiments made since the publication of the work in which the above sentences occur, LIEBIG says:—"Salt does not act as a producer of flesh; but it neutralizes the injurious actions of the conditions, which must be united in the unnatural state of animals fed or fattened in order to produce flesh; *and the advantages attending its use can hardly be estimated too highly.*"

The experiments of BOUSSINGAULT have often been alluded to, as indicating that salt by no means exercises a beneficial influence upon the growth of cattle, and upon the development of flesh, to the extent usually ascribed to it. His more recent experiments, however, result in favor of salt. Thus, two lots of steers, of three each, were fed on hay for 13 months, one lot being allowed salt, the other not.

The average weight per head of the *salted* lot, at the commencement of the experiment, was 955 lbs.; at the end of 13 months 2,090 lbs. Increase 1,135 lbs. They consumed per head 15,792 lbs. of hay. One ton of hay, therefore, produced 143 lbs. of increase of animal.

The second lot, which received no salt, averaged at the commencement of the experiment 896 lbs.; at the end of 13 months, 1890. Increase, 994 lbs. They consumed per head 14,553 lbs. of hay. Or one ton of hay produced 137 lbs. of increase of animal.

The steers receiving salt produced six lbs. more increase for each ton of hay consumed than those which were not allowed salt. This may be considered only a slight advantage, and in France did not pay for the cost of the salt; in this country, however, where salt is much cheaper, its use will doubtless be profitable. BOUSSINGAULT remarks "the salt exercises no considerable influence on the growth, yet it appears to exert a beneficial effect on the appearance and condition of the animal." After the first fourteen days, no perceptible difference was observed between the two lots; but in the course of the month following, the difference was visible even to the unpractised eye. In the beasts of both lots, the skin to the touch was fine and sound, but the hair in the steers having salt "was smooth and shining; that of the others dull and erect." As the experiment progressed, these signs became still more prominent. "In the animals of the second lot, after they had had no salt for a year, the hair was matted, and the skin here and there devoid of hair. Those of the first lot on the contrary, retained the look of stall-kept beasts. Their liveliness and frequent indications of the tendency to leap, contrasted strikingly with the heavy gait and cold temperament observed in those of the second lot.—"There can be no doubt," BOUSSINGAULT adds, "that a higher price would have been obtained in the market for the oxen reared under the influence of salt."

FARMERS, WRITE FOR YOUR JOURNALS!

THE Summer toil of the Farmer is past, and his leisure hours have come. The Winter evenings are the time for Farmers to reflect on the past, and meditate and plan for the future; and it is the time for them to hold communion with each other; and, through the medium of the Agricultural Journals, enjoy the pleasure, (*aye, and the profit, too,*) of interchanging thoughts and views on the various branches of their multifarious pursuit. Would they but adopt the plan of informing each other through the medium of their Journals, what they have done the season past, *and with what success*, and what they wish to perform the coming year, by giving a general statement of their farming operations, it would give volumes of useful facts that would be of great importance to them all. It would increase their agricultural knowledge, and habituate them to think *more closely and more accurately* on all their farming operations; and it would give a rich expansion to their agricultural thoughts, and be a real zest in their leisure hours; and the time and labor necessary to accomplish it would be but trifling, would they but make a beginning.

Make a map of the farm, number the fields, and mark on the map the number of acres in each field, and keep a farm journal; set down each season the number of acres that there are under the various crops, together with their probable average production; perfect accuracy is not essential for general purposes, but the nearer correct the more valuable it will be.

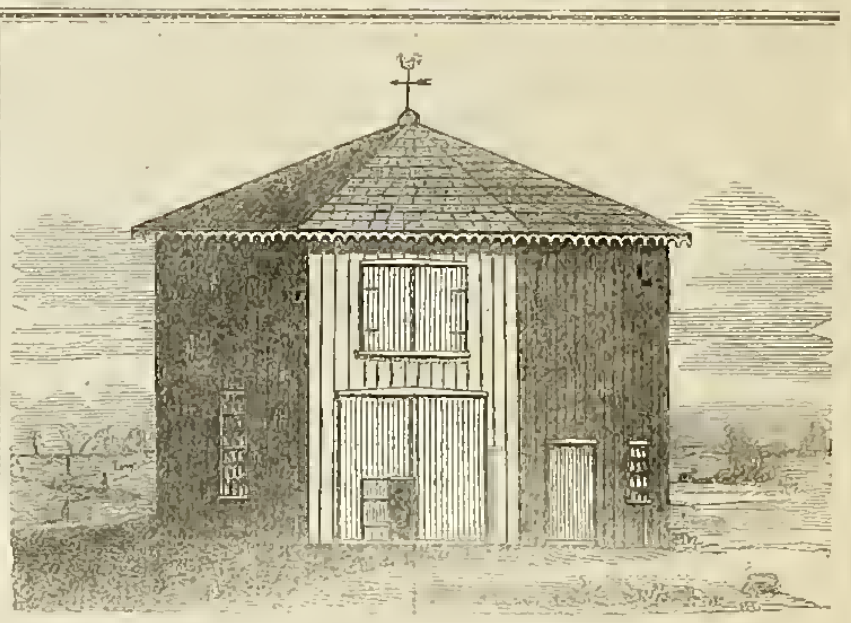
But I am fully aware that there are many inconveniences to be overcome for farmers to attend to even these trifles. We are not in the habit of writing, and our pen and ink are seldom in order, and often out of place; and after the fatigue of a long Summer's day we rarely feel inclined to look them up, and set down the number of acres plowed, planted, or sown; and we generally are a little affected with the impulse of vanity, and do not like to mention our miss-goes, nor let our poor crops be known, (which will sometimes happen to the best of farmers.) We must have something great or wonderful if we let our neighbors know it,—*which is wrong*, for it is not one bountiful crop, nor one or two fine animals, that is the evidence of the farmer's thrift, but it is the average production for a number of years *that is the evidence of a good cultivator.*

And there are few of us competent to put our thoughts on paper, in a free, easy, and fluent style, nor string out words to make a long article. But it is no more a disgrace to the farmer that he is not a fluent writer, than it is to the barrister that he cannot hold the plow. It is the farmer's province to deal *with facts*, and not with flowery language. A plain and distinct statement of facts and things is the beauty of the farmer's style. But all these obstacles and difficulties can be overcome by faithful perseverance. W. GARRETT.

Wheatland, N. Y., December, 1854.

COMPOST FOR CORN.—A correspondent of the *Penn. Farm Journal* uses as a manure for corn, a compost made of the following substances:—A layer of sods and soil six inches thick; a layer of stable manure, two inches; a layer of woods earth, six inches; as much night soil as can be collected; a bushel of plaster to every fifteen loads of compost, another layer of sods and woods earth, and all the refuse wood and coal ashes about the premises. After letting the heap stand a few weeks mix the whole thoroughly together, and strew on a little more plaster. He has made from 50 to 75 loads of this compost every winter for several years, and thinks it equal in value to barn yard manure. The heap should be as near the house as possible, and receive all the seeds, &c.

A GOOD CHEESE should contain all the butter of the milk as well as the curd; and in curing, the *butter should remain unchanged.*

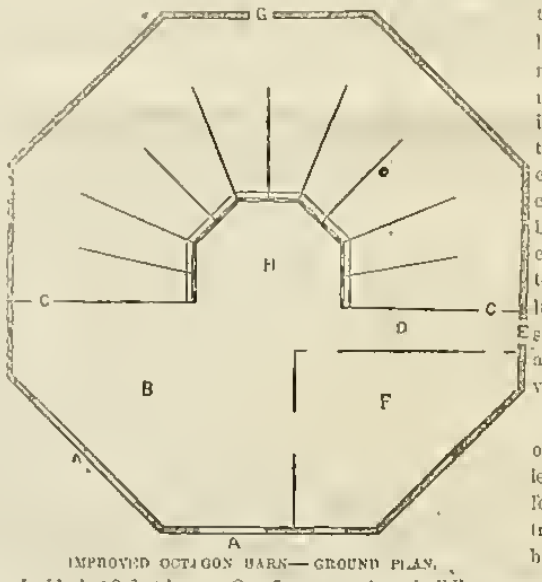


AN OCTAGON BARN — ELEVATION.

AN OCTAGON BARN.

ABOVE we present a view of an octagon barn, which may suit the ideas of some of our readers. It possesses the advantage of convenience in feeding stock, of compactness, and cheapness of construction. It is thus described by the *Peoples' Journal:*

"It represents a barn 42 feet in diameter.—



IMPROVED OCTAGON BARN—GROUND PLAN.

Each side is 12 feet long. Our first engraving shows a side elevation, and the second is a ground plan. In the plan A, are large doors by which the space B, allotted for wagons or carriages, is entered; C, doors leading to the stables; D, passage way with door E, at one end; F, grain and root room; G, barn-yard door; H, is the feeding-room, in shape half octagon. Here the cutting-boxes, &c., can be arranged. Apertures into the various mangers are indicated by the little openings.—'Through these all the hay and other food for the stock is put. Hay from the loft above is thrown down by means of a trap in the floor over H. The stalls being all arranged in a somewhat circular manner the feeding is quickly accomplished, and the animals easily secured.' In the hay-loft above, there being but one small space required in the centre, for the fodder to be thrown down, a much larger quantity of hay can be stowed than in barns where there are racks at the sides, which prevent full storage."

It is said that buildings on the octagon principle can be built at less expense than in any other form. If any of our readers have tried this, their experience would be valuable to others. Plans of buildings, properly drawn, will always be gladly received, and if thought of sufficient merit to justify the expense, will be engraved.

EXTRACTS FROM THAER'S WRITINGS.

It is only the straw of plants which bear a great quantity of leaves, such as peas, vetches, haricots, lentils and buckwheat, that contains a larger supply of nourishment. Its nutritive power is in proportion to the greenness of the crop when mown. Millet and maize straw, when properly prepared, likewise belong to the more nutritious class.

For winter feeding, it is almost universally thought necessary to chop the straw. The chopped straw is divided into scheffels, one of which, coarsely divided for horned cattle, weighs about 9 lbs., taking the straw of spring and autumn corn together. For an ordinary native cow, from three-quarters to one scheffel per day is thought sufficient.

Some persons think that hard water is best for horses; but they prefer soft water, and drink more willingly from ponds than from clear springs. Hard spring-water should therefore be exposed to the air for some time before given to horses.

Cleanliness is of great importance to the health of the horses; if it be neglected, a crust of sweat and dust collects on the skin, and gives rise to mange and other diseases. Agricultural horses cannot, indeed, be treated with all the minute attention bestowed on pleasure horses; such as currying, brushing, dusting, and washing every time they return to the stable; but, at all events, they should be curried every morning, and have their hams, knees and feet washed every evening, when they have got dirty.

When pigs are accustomed to pasturage, that of the woods is always preferred by them. It is indispensable, however, that they have a proper supply of water.

Communications.

THE DISUSE OF INDIAN CORN FOOD.

Eds. Rural:—I cannot subscribe to the views of your correspondent "Promiter," that the cause of the falling off in the use of corn meal for family bread is attributable to the dislike of its preparation by the female department.

As far as my experience goes, particularly in towns and cities, the fault is more in the provider than in the cook. In families of ordinary circumstances, when breadstuff is wanted, a barrel of flour is ordered and sent home without further trouble; but to get corn meal the grain has to be purchased and sent to the mill, or a bag must be found, and some one must have considerable trouble before it is got home. But the greatest cause of its disuse is, that it is unfashionable; in these degenerate days nothing but extra Genesee will go down, and if it is not as white as their own poor, bleached faces, back it goes to the seller to be exchanged—not being aware, or not caring if, they do know it, that if the entire bran was left in it, it would be ten times as healthy and better adapted to the human stomach, especially for those of sedentary habits. Fashion—appearances—has something to do with it; many families would be ashamed to be seen sitting down to breakfast or dinner with only Indian bread or cakes on the table, and another trouble is that one-half the modern housewives are as ignorant of the process of making good Indian bannocks or pudding as they are of the use of a spinning wheel.

Therefore, Mr. Editor, in these days of the assertion of woman's rights, I, as a housewife, (and one who was a *corn-fed* girl from an eastern county,) am not willing to bear the imputation of being the cause of banishing from the table that most healthy and delicious article, Indian corn bread.

The custom of using wheat flour, to the exclusion of the indigenous *golden sands* of every farm in the country, is prevailing even in regions where wheat cannot be grown. A year or two since, after living in a western city a number of years, I made a visit to my native place, and the tables of my friends were redolent of Genesee bread and cakes and pies. I saw nothing of my youthful food, which I had thought upon all the way, and had devoured in imagination any quantity of Johnny-cakes and puddings. One day, visiting at my grand-parent's, I couldn't stand it any longer, so I said to my Grandfather,

"Don't you raise any corn now-a-days?"

"Corn! to be sure I do, and I should like you to show me as fine a field at the west as I have now growing."

"Well what do you do with it?"

"Do with it? why we fat our beef and pork, and some we sell."

"Yes, Grandfather, to buy flour with, I suppose, for I have seen none upon your table since I have been here, which I greatly regret, as the sight of one of Grandmother's great warm Indian loaves was one of the pleasures I anticipated in my visit."

"Well, child, we are out of corn now, but you shall not be disappointed; I can get some in the neighborhood."

"But how can you consent to do without it, you who used to say you never wanted any other?"

"Why, the fact is, *times change and so do men.* I don't know how it is, but fashion makes habits and turns everything topsy-turvy. The young folks somehow don't fancy it, and the hired men, particularly if foreigners, won't eat it, and so its use has slipped up, like the health and constitutions of the present generation. I am getting too old to battle with the new-fangled ideas and notions of this age of labor-saving machinery, pianos and paper shoes. The present race are all either *do nothings* or *know-nothings*."

I thought at the time that the old gentleman had about hit the nail on the head, and in my mind there is both truth and poetry in the saying that "corn bread and common doings make men, while white bread and chicken fixings make no men at all."

Buffalo, Dec., 1854. HANNAH MARY B.

ICE-HOUSES AND WATER-CISTERNS.

Eds. Rural:—I noticed not long since, in the Rural, inquiries about water-lime cisterns, and in the last number inquiries about ice-houses. I reside where it is difficult to dig wells, and for water depend almost entirely on cisterns, and a supply of ice to cool it in summer. If my experience is of any worth to your correspondent, it is cheerfully submitted.

For a barn-cistern to receive the water of a 30 by 40 ft. barn, we usually dig ten feet in diameter and about 8 or 9 ft. deep, and about the shape of a cauldron kettle. About two feet from the surface of the ground, where we invariably find a hard-pan, we cut a groove four inches on which to commence a brick arch to cover the top, finding it cheaper, and far more durable, to cover with brick than with wood. This arch can be turned by any mason, and needs no support from below, as every course of bricks binds itself. It is admirable to cover this arch with a coat of water-lime plaster on the outside, before throwing on the earth; it is a preservative to the brick. The arch being completed, it is ready to be plastered. Water lime, one part, and sharp, rather coarse sand, five or six parts, should be mixed dry; then wet up a small quantity at a time, and plaster immediately, from half an inch to an inch thick; the bottom will be thicker, from the droppings of the mason. Another coat will be required as soon as the frost is hard enough to receive it, and should be of equal parts of water-lime and finer sand; after which, a wash made of water-lime and water may be applied with a white-wash brush; and as soon as it hardens, it is ready for water.—The first fall of water may wash a hole through the bottom, unless a board or flat stone is placed to break the force of the fall.

For an ice-house, I selected the most convenient place of access; dug a hole 8 ft. square and 8 ft. deep; *curbed* it up with 2-inch pine plank, one foot wide, running horizontal—each course being locked at the corner by cutting away one-half of its width. A sharp gothic roof, with a ventilator, covers the whole. We cut our ice with a cross-cut saw, (taking one handle off,) as late in the winter as we think it safe to wait; spread saw-dust or tan-bark 6 to 10 inches over the bottom, then a layer of ice, as close as possible, filling a space of 6 inches of saw-dust all around the outside of the ice, to prevent the warmth of the earth from melting it. When full cover with a foot of saw-dust. An ice-cellar of this size is sufficient for a large family or two small ones. Moses Kinosley.

Kalamazoo, Mich., Dec. 1, 1854.

DEEP CULTURE AND IRRIGATION.

Some persons have supposed that the water used in irrigation must be poured upon the plant, or made to overflow it, whereas, the water should pass up through the soil by means of capillary attraction, thus supplying moisture in nature's own way, and in nature's own quantity. It is true that showers are beneficial on the *leaves* occasionally; but the greater portion of the water sinks into the soil, to be returned to the plant as it needs it by the capillary tubes.

I have a piece of ground of about two acres on which I have been making some experiments the past season, having a stream of water from a spring passing through it. I plowed the ground (which was sod) in May last, into lands ten to twelve feet wide, and *four furrows deep*, by throwing each successive furrow on the top of the last, thus placing the sod at the bottom and the mellow dirt on top, and breaking it up near twenty inches deep.—By the way, I think much of this mode of subsoiling, as mine was all done with one pair of small horses. The dead furrows or ditches between the different lands were cleaned out with the hoe, and were filled with water at such intervals as it has been found necessary during the summer for the purpose of irrigation. The water was not permitted to overflow or run off, but settled into the soil, and supplied the plants by capillary attraction.

The result has been very satisfactory. All kinds of roots are surprisingly large and beautiful; and notwithstanding the season has been so dry that nearly all the gardens in the town have been rained with the drouth, as well as many trees killed, still there are beets in these beds that will measure over a foot in circumference, and nearly as long, with carrots, parsnips and other vegetables in proportion.

One square bed of strawberries, set in hills eighteen inches apart, and transplanted about the middle of May last, produced more than half a bushel of berries that we kept account of, besides what were eaten from the vines and destroyed by the birds. Some of the berries measured three and a half inches in circumference.

From one bed that contained nine square rods, or one-eighteenth of an acre, have been sold about $60 worth of vegetables during the summer. Besides, the *quality* of the vegetables has not been inferior to the quantity.—Vegetables grown quickly, and without being retarded by drouth, are far more healthy and palatable.—H. G. Berkley, *in Ohio Cult.*

French Farm Laborers.—The diet of the agricultural laborer in Normandy is chiefly bread and vegetables; where an English farm laborer consumes bread and cheese or bacon, a farm laborer of Normandy makes his meal of bread and an onion, or a pear, or some other common fruit. The women (who here do the most of the work, for they are now even rapidly introducing women as the money-takers and signal-mistresses at the railway stations,) live on the same fare. Tea is hardly known; and yet there is witnessed in these a general healthfulness of appearance; and I could but observe an evident self-respect which I wish right heartily I could see more widely diffused amongst the English laborers. Here are no rags to be seen—no drunkenness; the shops where wine is sold seem to be the less frequented of any.—*English paper.*

Bots in Horses.—A friend who has had much experience in the treatment of this disease, assures me that the best preventive is to feed the animal occasionally with heads of rye. The chaff and heads of this grain, according to his theory, eat out, and effectually remove the grub from its lodgement. He is confident that if horses be fed every five days in this manner, they will never be attacked by bots.—*Germantown Tel.*

Agricultural Miscellany.

Transactions of the New York State Ag. Society.—We are indebted to the Secretary, B. P. Johnson, Esq., for the Transactions of the New York State Agricultural Society for 1853. From a hasty examination we judge it to be, on the whole, an improvement on some of its immediate predecessors, although it contains nothing of striking merit or peculiar interest. To us the reports from the County Societies are usually the most interesting, and, in this volume, we have perused many of them, and the abstracts of lectures delivered at the several County Fairs with great pleasure. The spirit of progress and improvement which most of them breathe makes us feel proud of the Empire State, and leads us to hope that she will yet do something for the cause of Agricultural education, and especially for the *development* of agricultural truths which shall redound to her lasting honor.

The papers on the Cultivation of Flax, and on the Manufacture of Sugar from Beet Root, by Professor Winson (the British Commissioner to the "World's Fair," at New York,) are interesting and learned productions, but are not, we think, of any great practical value to American farmers. Professor Cook's report on the Onondaga Salt Springs we have read with much pleasure. It is a valuable paper. We believe, however, that most farmers will think the 37 pages which it occupies might have been filled with matter better adapted to their wants. The "History of Indian Corn, its Origin, its Culture, and its Uses," by O. N. Bement, we judge from a slight examination, to be one of the most interesting papers in the volume.

Monroe County Agricultural Society.—The annual meeting of this Society will be held in the Court House, Rochester, on Wednesday, January 10th, 1855. A large attendance is particularly desired.

The Treasurer of the Monroe County Agricultural Society would inform those persons to whom Silver Medals were awarded at the late County Fair, can get them by calling at the Seed Store of J. Ruealle & Co., Buffalo St., Rochester.

Sheep should be Sheltered at Night.—The *Landes* or Heath Sheep of Germany are probably the hardiest Sheep in the world, living in summer and winter almost wholly on furze. "They scratch away the snow to get at this plant." Dry furze is also given to them in sheds, also a little horse dung by way of relish. Yet notwithstanding the hardiness of this race of Sheep, according to Thaer, they "*cannot endure passing the night in open pens.*"

Corn for Fodder.—The French Translator of Thaer's *Principles of Agriculture*, remarks:—My cows in Italy were frequently fed upon green maize; and my people constantly observed a diminution in the quantity of milk, when cows previously fed on clover or lucerne were put on maize diet. Moreover, this plant is exhausting to the soil, even when mown in the green state.

How Much Should a Cow Eat.—Cows to give milk, require more food than most farmers imagine. S. W. Johnson, writing from Munich to the *Country Gentleman*, gives an interesting report of some experiments which have been made in Bavaria, from which the following is an extract:

"Our trials have confirmed the view that cows, to give the greatest possible quantity of milk, must daily receive and consume one-thirtieth of their live weight in hay, or an equivalent therefor. If more food be given it goes to the formation of flesh and fat, without occasioning a corresponding increase in the yield of milk; but if on the contrary less food be furnished, the amount and value of the milk will be greatly diminished."

Farm Accounts.—With the closing year, close all accounts; if they are allowed to pass over more than one year unsettled, the chance is that they will run many years, until confusion creeps in, and unkind thoughts, perhaps words, and alienation between neighbors takes place. Most transactions may be remembered through one year, so that errors, or misunderstandings may easily be adjusted. If you value peace and pleasant associations with your neighbors, suffer no accounts to run longer than one year. But if there are difficulties, yield a little; let your charity place the most favorable construction upon every word uttered and act done, and if you cannot agree, refer the whole matter to disinterested persons, and not to the law.—*N. E. Farmer.*

A remarkable instance of the vitality of wheat came under the observation of Mr. Montgomery, a successful farmer near Brucetown. On the second day of August last, he planted twelve grains of a peculiar kind of wheat in his garden. He looked long for its appearance, which it did not make till the 20th or October, when a blade from every grain fully showed itself.—*Winchester Virg.*

Turnips of small size have double the nutritious matter that large ones have.

FALL MANURING FOR POTATOES.

A correspondent of the *Germantown Telegraph*, alludes as follows to the practice of Mr. George Blake, of Fox Chase, Pa., who is somewhat noted as a successful potato grower:

Mr. Blake always hauls out his manure in the fall, and spreads it on the ground which he intends planting with potatoes the succeeding year. By so doing, the manure has time to become decomposed, and thoroughly mixed with the earth. This is much better than putting on the long manure in the spring, to be decomposed while the plants are growing, and to injure them with the heat produced by this decomposition. If the season should happen to be wet, the long manure would not be likely to have so deleterious an effect on the potato; but if it should be otherwise the heat arising from the decomposition of the manure, added to the already parched soil, would make it much worse, and in a great measure prevent the potatoes from setting on the vine.

This is a well-known fact in regard to corn, and farmers generally are so well aware of its effects, that but very few, if any, manure their corn in the hill with long manure, but prefer spreading it on the ground in the fall, to lay there all winter, and thus lessen the chance of the corn being injured by the dry weather of the summer.

This last season, although against the potato crops, Mr. Blake raised 200 bushels to the acre, while some others did not raise 50 bushels; and no doubt a great agency in this was his method of manuring.

THE NEGLECT OF LIQUID MANURES.

A correspondent of the *Germantown Telegraph*, after giving analyses showing that the great value of the liquid excrements of animals, observes:

To me it has been a matter of deep surprise that so few farmers adopt any efficient measures for the economisation of the liquid manures made on their premises. Of the millions of dollars' worth which is produced in the country during a single year, but a mere trifle is applied to the soil. The farmer who purchases from one to four hundred dollars' worth of solid excrement every year, and [illegible] invest his money to better advantage—in which supposition I concede he is perfectly right—never thinks that by the expenditure of a few dollars and a little labor, he could save a very important part of this large outlay, in the simple article of urine. The truth is, liquid manures, and liquid manuring, are yet novelties with us Americans: we do not appreciate them, and years will probably roll over us ere we shall. But there will be an awakening by and by. "There's a good time coming," and prejudice, which now holds so many in its gigantic iron grasp, will succumb to truth.

Turnips in France.—A correspondent of the *Mark Lane Express*, writing from Normandy, says:

There are turnips growing in the district through which I had passed. They appear to rely chiefly on their pastures—on their rape, and on their mangel wurzel for the winter food of their cattle. The sugar beat is also largely cultivated for the sugar manufactories, which are here extensively carried on; the chief supply of French sugar, indeed, is obtained from this source. The quality of the refined sugar made from beet is excellent in color and strength. The sugar manufactories which I have seen are handsome erections, with their machinery and other apparatus kept in the nicest order. The same remark applies to the courts and other little enclosures which surround them, these being remarkably well kept and covered with beds of flowers and evergreens. A similar observation applies even to the extensive cotton manufactories which abound around Rouen—everything looks neat and clean; flowers in profusion were in September surrounding these buildings—flowers which, however publicly displayed in France, no one appears to injure.

Horses in France and the United States.—The French Government has long paid close attention to the improvement and increase of horses. Its cavalry creates a large demand for horses of great power, and hundreds of males are kept at the public expense, in different parts of the Empire, to promote the breeding of superior animals. A report on the subject shows that France now contains 3,200,000 horses. This is one to every eleven inhabitants.

At the last census, the United States contained 4,325,652 horses, and 559,070 males.—Exclusive of slaves, who are more identified with mules than horses, we have one horse to four inhabitants. These facts indicate, in a striking manner, the high standard of comfort in this country as compared with that of France.

English Farms and Farmers.—Farms occupy two-thirds of the land of England. The number of the farms is 225,318; the average size is 111 acres. Two-thirds of the farms are under that size, but there are 771 of above 1,000 acres. The large holdings abound in the south-eastern and eastern counties; the small farms in the north. There are 2,000 English farmers holding nearly 2,000,000 acres; and there are 97,000 others who altogether do not hold more. There are 40,650 farmers who employ five laborers each; 16,501 have ten or more, and employ together, 311,707 laborers; 170 farmers have sixty laborers each, and together employ 77,000.

The Maine Farmer speaks of five years' trial of Bartlett pears grafted on the Mountain ash, as very successful, the trees bearing well and the pears excellent.

FRENCH FIELDS.

In comparison with the English system of enclosures, France may be called one vast open field. You may travel from Calais to Paris, from Paris to the German frontier, to the Alps, to the Pyrenees, and scarcely see a hedge or a partition-fence of any sort. This vast open field (unlike the open districts of England, where the operations of farming are generally conducted on the largest scale) is cut up into the smallest conceivable plots of every variety of produce. As far as the eye can reach, over vast plains bounded by sloping hills, you see the surface varied by every description of crop; none perhaps above an acre or two in size, the larger portion not more than the fourth or the eighth of an acre.—Here a vineyard 100 yards by 20, there a strip of wheat, lucerne, barley, oats, potatoes, clover, vetches. Few roads intersect this extensive garden, which, from the nature of the cultivation, must be traversed every day in all directions by the proprietors and cultivators of the various lots. The owner of a plot of lucerne, half a mile from the high road, must pass one neighbor's vineyard, another's wheat, and fifty such varieties, to reach his own plot, where he must cut his lucerne, make it into hay, and carry it home, either on his own back, or piled on an ass or horse, along the narrow paths which intersect the plots. The residences of these proprietors are almost invariably congregated into villages or towns, and lie, therefore, for the most part, quite wide of their respective allotments.

STRAW AND STALK CUTTERS—CUT FEED.

Now is the time for stock farmers to provide themselves with a good machine for cutting straw, hay and corn stalks. Stock farmers can do little else in winter than to take good care of the animals, and every consideration of economy is in favor of cutting feed. First, there is far less waste in using cut feed; and second, the same quantity is more available to the animal, especially to such as have not first rate teeth.

Now, we say, if you have not got a good cutting machine, buy or make one right off, fit up a nice clean place on the barn floor, make a big mixing trough, and try the experiment of feeding cut straw mixed with chopped grain, if you can spare it. This will pay better than to throw down the long dry feed into the fence corner, for the cattle to tread into the mud, so that you can have more time to sit by the fire and roast your shins. This is bad policy.

In connection with the use of straw cutters, farmers should get in the habit of having all their course grains *chopped* in a mill, before feeding. * * If stock feeders will not be persuaded to grind their corn, they should at least soak it in clean water for twelve hours before feeding.

In seasons of scarcity of hay, we have kept a team of working horses on cut rye straw, and chopped peas and buckwheat, and had them come out sleek and hearty in the spring. And in town we have kept a horse in constant use, and a cow giving milk, upon cut corn stalks and shorts, through the winter, quite as well as any other feed. A proper attention to this economy of fodder, will enable farmers to keep their stock in good order, and have something to sell, or to keep a much larger stock upon the same produce. It would be no hard matter for you to double the productiveness of your farms, and treble your stock upon the same acres. Will you do it?

Good Tillage and the Weevil.—The *Country Gentleman* says:—An energetic farmer of our acquaintance prepared his land last year, by first turning over *deeply* a good clover sod—then giving this a good coat of compost manure—then harrowing the inverted sod and compost into complete intermixture and pulverization—then turning the whole under with a gang-plow just deep enough for the roots of the young wheat, which was put in with a drill in the best manner. The whole of this was accomplished by the first day of autumn. Other crops on the same farm, after corn, were also well put in, but necessarily some weeks later, and in less favorable soil. Now mark the result. The first-named crop yielded the present season of drouth and insects, no less than thirty bushels of the finest wheat per acre—the other was only ten bushels per acre.

Bad Seasons.—The *Albany Cultivator* well says:—If the essential requisites of good tillage are attended to, such as heavy clover sod, muck and sod compost, and early sowing for *wheat;* high manuring, thorough intermixture, and clean tillage for *corn;* fertility, sufficient depth, and early planting for *potatoes;* and thorough underdraining, subsoiling or trench plowing, to prevent wetness at one time, and loss of drouth at another, with such other requisites as good management always points out; if these all should have place in the practice of our farmers, we should hear much less complaint of the ravages of depredators and the calamities of seasons.

Mammoth Oxen.—There is now on exhibition at Boston, a pair of oxen said to weigh *ninety hundred pounds!* One of them girts *twelve feet and one inch*, and is *eighteen feet in length*, from the tip of the nose to the end of the tail, and is *six feet four inches high!* They were raised by Mr. William Paddock, of Hoosick, Rensselaer county, New York, and worked and fattened by Mr. John Lee, of Washington Co., N. Y. They are bright and active, and well worth looking at.—*Boston paper.*

Cure for Mange.—Take lard and sulphur—mix together, and put in lamp oil sufficient to make it pliable, more or less according to the warmth of the day. Rub the part affected with a cob, till you take off the scurf, then rub on the above with the hands. In two days go over them again, and as often as you see signs of the disease.

Orchard and Garden.

A PROFITABLE GARDEN.

Ens. Rural—Below I give you the product of my Fruit and Vegetable garden this season. It occupies only 75 by 85 feet of ground—or a little over 23 rods. I use plenty of stable and street manure, and dig the soil deep—20 inches at least:

PRODUCTS.

Asparagus, 1 large bed	$2 00
" roots, 5 hundred, 75c	3 75
Beans, string, 3¾ bush., $1	3 75
Beets, Early Bassino, 4 bush., 75c	3 00
" late Sugar and Blood, 6 bush., 50c	3 00
Cabbage plants, 20 hund., 50c	10 00
" 120 heads, (fine) 6c	7 20
" 40 " 3c	1 20
Celery, plants, 6 hund., 50c	3 00
" 100 heads, 8c	8 00
" 216 heads, 6c	12 60
Cucumbers, 12 hills, 12c	1 50
Gooseberries, 9 quarts, 12c	1 13
Grapes, 1 bush	1 00
Lettuce, 1 large bed, 5 varieties	2 80
Onions, Potato, 5½ bush., $1,25	6 87
" " seed, 1½ bush., $2	2 50
" Black seed, 2½ bush, $1	2 50
Oysters, Vegetable, 1 bush	1 00
Peas, Early Kent, 3½ bush., $1,50	5 25
" Late Marrowfat, 4 bush., $1	4 00
Raspberries, 16 quarts, 12c	2 00
Radishes, Black Spanish, 1½ bush	1 50
Pears, White Doyenne, ½ bush., $3	1 50
" Common, 4½ bush., 75c	3 38
Parsnips, 4 bush., 75c	3 00
Squashes, 8 hills, 19c	1 50
Strawberries, (very fine,) 65 quarts, 25c.	16 25
Sweet Corn, 3 varieties	3 00
Tomato plants, 5 hund., 50c	2 50
" 8 bush, $1	8 00
	127 88
Twelve Premiums	20 00
	$147 88

EXPENSES.

Manure, 24 loads, 25c	$6 00
Labor, 8 days hired, $1,25	10 00
Seed	5 25
	$21 25
Total after deducting expenses	$126 63

Some of the premiums were for flowers and boquets. Perhaps I have made some of my estimates too high, and others too low. Everything was of the best. D. C. Greenleaf.

Brockport, Dec. 6, 1851.

WEEDS IN WALKS.

The following modes for preventing the growth of weeds in gravel walks, are copied from the correspondence of the *London Gardener's Chronicle*, and may prove valuable to some of our readers—at the proper season:

In order to prevent weeds from growing on walks, put a layer of gas-lime under the last inch of gravel. This also helps to bind the gravel.

The following is the way in which I managed walks when I was a gentleman's gardener. In one situation I held I had three miles of gravel walks to keep in order. In winter, when there was sufficient frost to freeze the gravel in the mornings, I employed the laborers in cleaning the walks with a half worn out birch broom, sweeping backwards and forwards, and then removing with a new broom what the old ones took off the surface. When the walks were covered with moss it was scraped off with a hoe before the broom was used. After having pursued this practice for 6 years, my walks looked as fresh and clean as if they had been newly graveled. Last season very few weeds made their appearance during the summer; by performing the operation when frost is on the ground, you not only remove all small weeds, but you sweep off most of the seeds deposited there to vegetate the following summer. If docks, thistles, or dandelions appear, cut out their crowns and put a little salt on them; you will not have to repeat the salting twice in one place.

LIQUID MANURE FOR THE GARDEN.

Permit me to offer a few remarks on the valuable effects that night-soil, when reduced to a liquid state, has upon the various productions of the garden; and, as not a few of your readers will be aware, manures are of no use to vegetation until they are dissolved in water.—When, therefore, liquid manure is used, the cultivator has less trouble, and at the same time he is applying a substance in the state in which plants can best receive it and derive most good from it.

For some years past I have been in the habit of using this description of manure to a considerable extent, and have found the results to be very beneficial; besides it prevents the necessity of applying for such quantities of manure in a solid state. At the end of the season I make it a rule when turning up vacant pieces of ground to the action of frost, to lay upon the exposed soil some rotten manure, adding a considerable portion of vegetable refuse reduced to mould for such purposes.—This mould is obtained by taking all the refuse possible from the garden, throwing it into a heap to rot, and turning it two or three times during the summer. The decomposed vegetable matter is admirably adapted for the growth of plants for culinary purposes.

During the winter I go over the ground intended for the Brassica family, pouring on a large quantity of this liquid, in order to allow the winter rains an opportunity of washing it down, so that the ground is greatly benefited.

The above is also applicable to gooseberry and currant bushes. I have a large basin made round the root of each, and about the end of November I apply two large pans full of the liquid to each plant; afterward I level in the earth that had been previously taken out for the purpose of forming the basin.

About the end of January, after the bushes have undergone their winter pruning, they again receive a similar supply before commencing to put the ground in neat order the season. Raspberries and strawberries are also greatly benefited by the use of this liquid. In applying it to raspberries the method recommended for gooseberries is suitable, and where it is applied to strawberries it increases the crop two-fold. Mr. Rivers strongly recommends it for roses. He says, "I have found night-soil mixed with the drainings of the dunghill, or even with common ditch or pond-water, so as to make a thick liquid, the best possible manure for roses, poured on the surface of the soil twice in winter, and from one to two gallons at each time. December and January are the best months; the soil need not be stirred till spring, and then merely loosened two or three inches deep with the prongs of a fork; for poor soils, and on lawns, previously removing the turf." This method I have adopted for several years, and found it most efficacious."

When night-soil is not to be got, I take, as next best, cow-dung made into a thick liquid of the consistency of porter, and apply it in larger quantities than when night-soil is employed.—*London Florist.*

KEEPING APPLES.

Apples that are designed for late keeping should be assorted and all the defective ones laid aside; place them carefully in boxes, or on shelves in the cellar, which should be kept at nearly the freezing point and permit a plenty of air. Apples in very large boxes, casks or bins, do not keep as well as when in smaller parcels. They always should be looked to every week, throwing out all that are unsound. The following which we copy is worthy of trial, and if found to keep apples good can be easily adopted. A correspondent of the Ayr Advertiser, Scotland, writes thus:

I have a dark closet in my house, or rather I live in a row with windows back and front. The house is four stories high, and the length from back to front is so great that we have three rooms on the floor, the centre dark. On the third story the floors are plaster, and I find the temperature so even that I use it for a wine store in preference to the cellar, having fitted it with bins. In this room I put some hampers of apples (like pearmain.) I wanted one of the hampers and turned the apples in one of the bins among the dry saw-dust (pine saw-dust.)

A fortnight ago we looked at them, having used up the others gathered at the same time, and from the same tree, all of which were much wrinkled; but on those off and from the sawdust, I found them in a most beautiful condition—those covered with saw-dust were as plump and fresh as when gathered, while those partially buried were only so to the extent covered with the saw-dust, the upper portion being wrinkled. I am so pleased with the discovery, that I shall pack them in bins next year, for I have no doubt they will keep in this way till next Christmas.—*Mich. Farmer.*

Large Winter Nellis Pears.—Specimens are acknowledged from Adrian, Mich., measuring over eight and a quarter inches in circumference—which is very large for this high flavored winter variety. These specimens, ripened about Christmas, into the richest juiciness, would be in great danger of throwing the editor into raptures.—*Albany Cultivator.*

FUCHSIAS.—THE MAGNIFICENT.

We continue our illustrations of this fine plant by an engraving of the "Magnificent."—It is thus described:—"A splendid large flower, rosy calyx, pretty well reflexed, showing a large, rich, rosy salmon corolla. Habit spreading and vigorous, and a free bloomer."

Mechanic Arts, &c.

BASSWOOD PAPER.

The article has come. It is before us—three qualities of it. One almost good enough for a newspaper, the other better than most of the paper *The Democracy* has had to put up with—and the third a strong, smooth, even sheet, fit for promissory notes—nay for love-notes, the least dangerous of the two. It is made of basswood. The genius who got up the Beardsley Planing Machine, studied out this paper. He made the pulp in the kitchen of his house in Albany—and made the paper there too, after some primitive fashion, in which a sieve conspicuously figured. On one of these samples is an advertisement of $50 reward. Basswood has fairly entered into the service of Man in the pursuit of stolen property. This handbill indicates a horse and wagon as the object of the distress of the gentleman who invokes the linwood to aid his search of a thief. It is of white, and quite smooth paper.

We understand that the wood is treated by revolving cutters, which reduce it to fibre in no time. Then something else is done to this fibre, which we don't understand. A caveat is on file at Washington, which will inform the curious what this something is. Two other things, we are told, of which the most important is, that Mr. Beardsley can make the pulp, and make a fortune out of it, by selling it two cents the pound. The other is, that an edition of the *Albany Evening Journal* will soon be printed upon the paper.

Mr. Beardsley was last week engaged in building machinery for a paper mill, under his new process. The white cedar is said to yield the finest and strongest paper. There is talk of setting that apart for bank notes. The Cotton wood of the south, and the Cypress, are said to be especially adapted to it, as also is the Tamarac. Devoutly do we invoke success upon Beardsley's efforts.—*Buff. Dem.*

Preparaton of Skins.—John Taylor, of London, has taken a patent for the use of the brains of animals in the preparation of fine skins, as a substitute for the yolk of eggs which is now used. The brains are dissolved in warm water, and the solution is then strained, after which it is used either alone or mixed with flour until it assumes a pasty appearance like the yolk of eggs. The quality of inferior kinds of skins are improved to render them fit for glove-making by placing them in a close vessel and forcing in a solution of animal brains with a pump, so as to force it through the pores of the skins.

We believe our American Indians use the brains of the animals which they kill in the chase, for the purpose of preserving their skins and rendering them fit for moccasins, &c.—*Sci. Am.*

Influence of Lake Erie upon Climate.—It is believed that the climate on the southern shore of Lake Erie is rendered mild by the atmosphere of that great body of water. While at Columbus the approach of winter has been made evident by the freezing of the Scioto, in Cleveland, roses, geraniums, chrysanthemums and verbenas are still in bloom in open grounds.—*Rochester Democrat.*

USE OF FUEL.

As the time is near at hand when large fires must be supported in Northern dwellings, in order to maintain a cheerful warmth during the severe cold of stern winter; and as coal forms a very heavy item of domestic expenses, it is important to inquire if fuel is generally used in the most economical manner. We believe it is not; indeed, we are confident that more heat is wasted—passed up the chimneys of the houses in New York—than is obtained and used for warming and cooking purposes. This is especially true respecting grates that are merely set into the wall. It was demonstrated by Count Rumford many years ago, that a grate sends five-sixths of the heat up chimney and only one into the room; it may at least be safely calculated that there is a waste of three-fourths of the fuel by burning it in a common grate. We do not know how many grate fires are maintained in this city for four months in the year, but they cannot be less in number than ten thousand. It may be safely calculated, we think, that in this city alone, ten thousand fires send off three-fourths of their heat unused into the clouds every day during the winter. A grate fire is very cheerful and pleasant to look at, but it is far from being economical.

Stoves give out a far higher per centage of the heat of fuel under combustion than grates, but many of them are so set and arranged as to squander the heat by sending it half unused into the chimney. It is a very common plan in many houses in New York, to have the stove placed a very short distance from the wall, the pipe running in a horizontal line into an opening in the fire-board. This is a very unwise plan for using fuel, although it may be considered a more snug and neat method of arranging the stove and pipe, than by setting the former well out into the room, running up the latter some distance above the stove, and then directing it horizontally—old fashion—into an opening made for its reception in the chimney. The heat obtained from stoves in rooms is by radiation from the metal; that is, the air absorbs the heat of the metal of the stove, with which it comes in contact, and communicates the same from particle to particle throughout the room. It is therefore evident that the more radiating surface there is in a stove, and in its smoke conductor or pipe, the more heat will be communicated to the surrounding atmosphere. And it is also evident that the nearer the stove is placed to a chimney, and the shorter its smoke pipe, the nearer it approximates to the character of a grate in respect to its waste of fuel. Here, then, we have positive data with regard to the most economical method of using fuel for domestic purposes, and our people would do well to profit by its application.—*Scientific Am.*

American Clocks.—The latest piece of Yankee clock-ingenuity is a clock for the Japanese and Chinese markets, measuring time as the hours are counted in China and Japan, the hands making a diurnal revolution within twelve Chinese hours. The characters on the dial plate are Chinese. The inside circle has four characters showing the sun-rise, meridian, sun-set and midnight. The next circle exhibits the odd and even hours; the even hours are designated by a bold figure, and the odd hours by smaller ones. The third there had the common minute marks, and at the extreme outside was the Chinese numerals, running from one to twelve. This clock was invented by Mr. S. N. Botsford, of Boston.

Grinding Mills.—An improvement in mills for grinding feed has been made by Amory Felton, of Troy, N. Y., which consists in the employment or use of a corrugated cylinder and concave and cap, having spiral flanges and reciprocating teeth. The grain to be ground is placed in a hopper above the corrugated cylinder, and is made to rotate, when the grain passes between the concave described and the cylinder, and is crushed between the spiral flanges of the concave and the corrugations on the cylinders, and is then discharged, ground, by an opening in the end of the concave. This mill is now in use, and grinds four bushels of corn per hour by one horse power. Measures have been taken to secure a patent.

Improvement in Railroads.—Hiram Carpenter, of Rome, N. Y., has taken measures to secure a patent for an improvement in railroads, which consists in having either the rails or sleepers (or both,) attached to the top of cast-iron posts, fitted within cast-iron cylinders, firmly secured in the ground in any proper manner, the lower ends of the posts resting upon India rubber, or other suitable elastic substance placed within the cylinders. This is for the purpose of giving the rails of tracks that proper elasticity which is requisite for easy traveling, and which tends to save tear and wear in both rails and rolling stock.

An invention has been patented to close a bottle by a common cork, without wiring or tying. The cork, instead of being inserted, as usual, in the neck of the bottle, is inserted into a passage nearly at right angles to the neck.—The pressure of the gas acts upon it laterally only, and not on its end, and therefore does not tend to expel it.

Japanning Leather.—A. V. Newton, of London, has secured a patent for opening the pores of leather by impregnating it with sulphur for the purpose of preparing it for enduring a great degree of heat and for toughening its fibres. The sulphur is combined with the varnish, and any gum elastic solution may be combined with it.

Preserving Timber.—A. E. P. Le Gros, of Paris, has secured a patent for preserving timber and all kinds of organic matter by means of a solution of double salt of manganese and lime, or of manganese and zinc, used either alone or with an admixture of creosote.

Domestic Economy.

INDIAN BREAD.

The "Prompter," in his "Johnny-Cake Philosophy," in a late No. of the Rural, attributes the falling off of Indian meal, as a food, to the housewife, saying "it requires more care and forethought, and, perhaps, more labor, to get up its preparations than wheaten flour, as a larger batch of bread from that material can be made at one time, and last for several days without any further care; while the other *requires labor at every meal.*" I am "very happy" to tell him that he is a *little* mistaken if not more. Indian *bread* can be made quicker than wheat bread, which will neither "require labor at every meal," (nay further than the labor of eating it) nor for several days; and it is far more healthy, especially for farmers. How it would affect the stomachs of "sweet cake humanity," I don't pretend to say; ("sad experience" would tell,) but a farmer's stomach would "laugh" at the idea of having it to work upon. Here is the recipe: Take two quarts of good buttermilk, two-thirds of a tea-cupful of molasses, one table-spoonful of salt, one table-spoonful of saleratus; mix as thick as it can be stirred, with equal parts of Indian meal, and wheat meal, or Graham meal. Then *steam* it two and a half or three hours. Before steaming let it stand in a warm place half an hour to rise. The above mixture will make two loaves, in two quart basins.—Sarah, *Gates, N. Y.*

HOW TO CURE HAMS.

The following are the recipes for curing hams, furnished by the competitors to whom premiums were awarded for hams exhibited at the Maryland State Fair:

No. 1.—For 1,000 lbs. of meat, which has hung for several days after killing, take 3 pecks of Liverpool salt, 1½ lbs. saltpetre, 3 pints of molasses, 3 lbs. brown sugar, and ¼ lb. cayenne pepper. Mix these ingredients together and rub the mixture on the meat well and thoroughly, both on the skin and flesh. Let it lie in the salt for about 5 or 6 weeks; hang up, and smoke with green hickory wood.

J. C. Walsh.

No. 2.—For 1,000 lbs meat, take ½ bushel fine salt, ½ gallon best molasses, 3 lbs. brown sugar, 2½ lbs. saltpetre, pounded very fine; mix all the ingredients well together in a large washing tub, and rub the meat therewith until you absorb the whole quantity; the meat must be taken out of the cask once a week and rubbed with the pickle it makes the two first times you take it out add at each time a plate-ful of alum salt; it ought to remain in pickle five or six weeks, or according to the size of the meat. W. H. Marmiott.

No. 3.—To 1,500 lbs. of pork take ½ bushel G. A. salt, ¼ bushel fine salt, 2 lbs. saltpetre, 4 lbs. brown sugar, ½ gallon sugar house syrup, ¼ lb. cayenne pepper, well mixed and thoroughly rubbed on, especially about hocks, packed away in box or cask, with opening for brine to pass off, turned in 3 weeks, and at end of sixth week hung up and smoked with green hickory wood. Middlings, shoulders and hams all cured by same recipe.

Mrs. G. Y. Worthington.

CHEAP AND EXCELLENT CANDLES.

Mr. Holbrook:—The following recipe I have tried twice, and find it all that it is cracked up to be. I have no doubt that it would have been worth more than $20 to me if I had known it twenty years ago. Most farmers have a surplus of slale fat and dirty grease, which can be made into *good candles* at a trifling expense.

I kept both tallow and lard candles through the last summer, the lard candles standing the heat best, and burning quite as well, and giving as good a light as the tallow ones. Directions for making good candles from lard: For 12 lbs. of lard, take 1 lb. of saltpetre, and 1 lb. of alum; mix them and pulverize them; dissolve the saltpetre and alum with a gill of boiling water; pour the compound into the lard before it is quite all melted; stir the whole until it boils, skim off what rises; let it simmer until the water is all boiled out, or till it ceases to throw off steam; pour off the lard as soon as it is done, and clean the boiler while it is hot. If the candles are to be run, you may commence immediately; if to be dipped, let the lard cool first to a cake, and then treat it as you would tallow.—*Cor. N. E. Farmer.*

To Improve Tea.—Mr. Soyer recommends housekeepers to place the tea-pot upon the hob for a little while before making. This plan certainly improves both strength and flavor.—Rain-water, when pure, is the best for making all infusions, including tea, of course: since the solvent powers of water are great in proportion to its freedom from earthly salts.

Sir A. Cooper's Chilblain Liniment.—One ounce of camphorated spirit of wine, half an ounce of liquid subacetate of lead; mix, and apply in the usual way three or four times a day. Some persons use vinegar as a preventive; its efficacy might be increased by the addition to the vinegar of one fourth of its quantity of camphorated spirit.

Dr. Hall says:—"I set it down as a clearly established fact, that *a glass or more of cold water, drank habitually at meals, or soon after, is a pernicious habit, even to the most healthy.*

Educational.

MORAL AND SOCIAL EDUCATION.

In the training of the young, it is highly important that their moral and social education be not overlooked. Men may be great in intellectual attainments, and yet, if correct moral principles and social feelings and habits be wanting, they will be fitted only to curse rather than to bless mankind. Great talents and abilities devoted to evil, or only negative for good, are by no means desirable when all are free, and the majority disposed to follow impulses for evil rather than for good.

In the moral training, however, (which may be thought to include the religious,) it is not necessary, nor desirable, that any particular set of religious doctrines or tenets should be inculcated:—that would be "sectarianism." There are, however, certain grounds, broad and tenable, on which all may meet, whatever be their religious sentiments. These may properly be made subjects for the training of the young.

Among these are the general principles of right and wrong, honesty, justice, respect for the rights of others, benevolence, kindness, generosity, obedience to parents, superiors, &c.; and in short, all that is implied in that broad rule of human action, "Do unto others as you would have them do unto you."

If there is any one thing that requires early and constant attention in the training of the young, it is their relative duties to each other and to the world around. There is so much selfishness,—so little regard to the rights of others; and so great is the influence of these in the world, that to neglect the early training of the young on this point, is to neglect the best interests of humanity. And while many parents would be decidedly opposed to any particular form of religious instruction, few would object to that instruction which has for its object the improvement of the young in the general principles of right and wrong.

Should the teacher feel it his duty to impart strictly religious instruction, especially of a sectarian character, he should do it at other convenient opportunities—not as a part of his professional duties, unless it be in a sectarian school, or by general consent.

Social training embraces all that is implied in the word "manners." Never was there a time in the history of our country, when this duty was so much neglected by parents, (perhaps also by teachers,) as the present. The very prevalent doctrine, that children must not be restrained for fear of "breaking their spirits," and thus "destroying their native energies," has led to an almost total neglect of all proper training on the subject. Hence we see so little respect for parents, for age, and for superiors generally. Indeed, the word "superiors," in this good old *orthodox* sense, has become almost obsolete. Yet many parents who seem indifferent to the manners of their children at home, wish to have the teacher attend to them at school. All wish to have their children appear well before the world, though many fail, some from neglect, others, perhaps, from ignorance, in training them aright. Hence it becomes a part of the teacher's duty to "care for these things;" and that teacher who neglects to do so, fails in one of his prominent duties.

REMARK.—When we consider the almost unbounded influence of a kind and faithful teacher, over those under his care, the extent and duration of that influence, and add to this his responsibility, not only to parents and children, but also to himself, his country, and posterity, the profession of the teacher assumes an importance that attaches itself to few other professions. It is important that he should feel this, and equally important that the world should feel it and act upon it.—Then would the character and office of the teacher be better appreciated, and his labors be more valued and better compensated; and we should not so frequently hear him complaining, (even the world assenting to the justice of the complaint,) of the "thanklessness" of his office. H.

Oat West, November, 1864.

"NOW."—"Now" is the constant syllable ticking from the clock of time. "Now" is the watchword of the wise. "Now" is the banner of the prudent.

Let us keep this little word always in our mind; and whenever anything presents itself to us in the shape of work, whether mental or physical, we should do it with all our might, remembering that "Now" is the only time for us. It is indeed a sorry way to get through the world by putting it off till to-morrow, saying, "Then I will do it." No! This will never answer. "Now" is ours; "then" may never be.

SELF-CONTROL.—To live happily with others we must first learn to live happily with ourselves. He who rules his own spirit well, can so adapt himself to the shifting phases in the life of his friends as never to be drawn into harshness, never to do violence to the feelings or tastes of those who are bound to him by the sacred ties of friendship or love.

TRY AGAIN, THERE IS NO REMAINDER.

WHEN we were a lad, just after we had commenced the puzzling study of Arithmetic, we one day had occasion to seek the teacher's aid in solving a "question." It was in Division, and cipher as we would, we could not get an answer without a "remainder." After trying for two long hours, we took our slate, marched up to the desk, and handed it to the teacher. He looked at our work, said not a word, wrote something on the slate, and handed it back to us. Vexed and out of patience with his cool indifference we returned to our seat, and after indulging in some very rebellious thoughts against him, we read the writing. It was, "Try again, there is no remainder." The silent but expressive sentence gave us more assurance than if it had been spoken a dozen times. It inspired us with new confidence. We did try again and again, and after repeated exertions we succeeded in obtaining the correct result without a remainder. We felt proud of that boyish triumph, and when we again laid our slate before the master, we were amply rewarded with an approving smile and an encouraging word.

Those six words were stamped indelibly upon our memory, and ever afterwards when any apparent difficulty stared us in the face in our undertakings, they recurred to us. Right there before us—with our mind's eye—we can see them on the slate—every word, every letter distinctly—and we take fresh courage and "*try again*." Those words were the talisman to all we have ever accomplished. They were not cherished because of their authorship.—The crabbed little schoolmaster that wrote them was the least beloved by us of all our youthful instructors, and yet he wrote six words that are engraven on our heart.—*Conneautville (Pa.) Banner.*

EMPLOYMENT IN SCHOOL.

THE teacher who would govern his school, must keep in memory one of the first principles in the philosophy of mind, that what one does *from his own election*, is done much *more cheerfully*, than what is *demanded* of him as a *task*. If the teacher can interest his pupils in employment, excite their minds with the love of knowledge, and engage them in their studies he may both improve them in knowledge, and easily govern them. Let the teacher then say little about *government*: about what *he* shall do, or *they* must do; but let him devote himself sincerely and arduously to *teaching*, and exciting his pupils to the acquisition of learning. If he has any refractory scholar, let him devote that one to some particular attention, in the way of explaining his lesson, or interesting him in the school. This course will generally succeed much better than threats or loud talk about order. Besides one cause of disorder is want of employment, more than deep-seated viciousness, or a settled determination to resist the authority or wishes of the teacher. If the teacher would ask himself, How can I govern my school? let him answer in part by another question: How can I engage every scholar in his studies? One method is, for the teachers to spend but little time in school hours in discourse about order, or other matters than those pertaining to recitations. If a teacher would have his pupils work, let him work; let him call upon every scholar to recite; and instead of faulting him as an ill-behaved scholar, ascertain why he has not learned his lesson.—*N. H. Report.*

A MAN ENTERING INTO LIFE.

A MAN entering into life ought accurately to know three things:—First, where he is. Secondly, where he is. Secondly, where he is going. Thirdly, what he had best to do under these circumstances. First, where he is—that is to say, what sort of world he has got into; how large it is; what kind of creatures live in it, and how; what it is made of, and what may be made of it. Secondly, where is he going—That is to say, what chances or reports there are of any other world beside this; what seems to be the nature of that world; and whether for information respecting it, he had better consult the Bible, Koran, or Council of Trent. Thirdly, what he had best do under these circumstances—that is to say, what kind of faculties he possesses; what are the present state and wants of mankind; what is his place in society; and what are the readiest means in his power of attaining happiness and diffusing it. The man who knows these things, and who has had his will subdued in the learning of them, that he is ready to do what he knows he ought, I should call educated, and the man who knows them not, uneducated, though he could talk all the tongues of Babel.—*Ruskin's Stones of Venice.*

BOYS, TAKE NOTICE!—Benjamin Franklin Wade, Senator in Congress from Ohio, and Edward Wade, Representative in Congress from the same State, are brothers, and were born in Feeding Hills, (West Springfield,) in this county. Their father was poor, but they improved their leisure moments in reading or study, while the sons of the wealthy were spending their time in foolish amusements, and thus laid the foundation for their present fame and usefulness. They did not have the benefit of a liberal education.—*Westfield News Letter.*

LIVE WITHIN YOUR MEANS.—The art of living easily as to money, is to pitch your scale of living one degree below your means.—Comfort and enjoyment are more dependent upon easiness in the detail of expenditure, than upon one degree difference in the scale.

TEACHERS and pupils ought always to be friends. A genial feeling of sympathy and affection goes much further towards enforcing obedience to the rules of school than all the rules and forules ever wielded by the sternest tyrant of the schoolroom. Courtesy always wins its way.

Useful Olio.

AN HOUR AT THE ASSAY OFFICE.

But to return to business. The gold having been, as we have seen, weighed, melted, weighed again, and deposited as bullion in the vault, is next to be assayed—that is, to have its value and fineness ascertained by a delicate chemical process. We were fortunate enough to witness the operation, as superintended by Mr. Mason, the Assistant Assayer. It is performed in this wise,—on each deposit—which, it must be remembered, still retains with its gold the various impurities with which it first came out of the mine—two bars are selected at random, and a small shaving of a prescribed weight is cut from each. A pair of scales is employed, so delicate that the thousandth part of a grain will turn it, to weigh them separately. They are then wrapped round in a thin coiling of lead, and having been put into little cups, called cupels, made of phosphate of lime—or, in plain English, of burnt bone—are subjected to an intense heat. At once the lead melts, and uniting with the copper, and other foreign ingredients of the gold, assists their oxydising, and with them is absorbed into the porous substance of the cup, leaving no sign, except a dark stain, of its presence.—But the gold still shines out in the cup, enclosed by a trifling wash of silver, that for some reason or other does not like to disappear with the remaining alloys.

Now, although there is no objection to silver *per se*, the Assayer would prefer that it would not enclose that beautiful round button of pure gold that remains in the cup, for the same reason that the fastidious boarder, in his Chatham street head-quarters, preferred his butter and his hairs on separate plates. This, then, is the way he separates them:—The button is placed on an anvil and flattened with a hammer to such a thinness as may make it permeable to the nitric acid, in which it must now be immersed. A small long-necked bottle, called a matrass, contains this fluid, into which he drops the button. The bottle is heated over a furnace, and the acid completely absorbs the remaining alloy, leaving the gold perfectly pure, with only a slight blark covering of oxydised alloy, which is removed by annealing. The adhering acids are then washed off, and all he has to do is to re-weigh the two shavings of gold, to ascertain how much they have lost by the chemical changes they have been put through. He thus discovers what proportion of pure metal is contained in a given part of a deposit, and from this judges of the fineness and value of the deposit itself. The owner then can receive its value in pure bars of other gold, and go on his way, resigning all claim to the original quantity which he brought to the office.

The Assayer has now done his work, and the responsibility of the Melter and Refiner begins. His business is merely that of his predecessor, only on a less delicate and much larger scale; i. e., to free the entire deposit from alloy, just as the Assayer had cleansed his diminutive shaving of a few grains in weight, from its impurities. Let us ascend one story higher in the building, and see him operate. When we reach this height, we see the workmen in the Granulating-Room swelleting over seven large furnaces along the sides, and we notice that the cement-floor of the apartment is covered, about two inches deep, with iron grating, through which there gleam, at all times small particles of refuse gold or silver which have been carelessly or unavoidably dropped. It will not do to lose them, and so, at certain periods, the floor is carefully swept, and the sweepings, dirt and all, with the men's aprons, the discarded crucibles, ladles, &c., are collected, burnt, ground, and otherwise transformed, till a very considerable revenue of precious metal is obtained therefrom. What it amounts to in the Assay Office has not been definitely stated, but we were told that at the Mint, in Philadelphia, it came to the handsome figure of $50,000 a year.—*Eve. Post.*

ARTISTIC WORKMANSHIP IN POMPEII.

THERE are scales and steelyards, which can only have been meant to weigh provisions, but the chains and bars of which are delicately wrought. The weight even is found made to represent a warrior, with a helmet most beautifully chiselled; and so genuine and true, so really intended for every-day use are these commercial implements, that one of them has stamped upon it its verification, made at the Capitol, declaring it to be just. The lamps also, and the candelebra by which they were supported, are most elegant, not made upon a pattern, a fashion of the season, but exhibiting true artistic beauty. This feeling is carried so far, that even surgical instruments found in those ruins, which could only have been meant for practical purposes, display equal attention to ornament and delicacy of finish. There is no end of other vessels, which must have served for domestic purposes, such as braziers, for instance, of which handles, rims, and other parts, are finished beyond what the finest bronzes now in Paris usually equal. What are we to conclude? You cannot suppose that these were made from the design of Flaxmans, the Stothards, and the Baileys of those days. Who has ever heard of any great artist in Pompeii or Herculaneum?—*Cardinal Wiseman.*

POWER OF STEAM.—President Hitchcock says that there are in Great Britain, at the present day, fifteen thousand steam engines driven by means of coal, and thus is put into operation machinery equaling the unaided power of 300,000,000 or 400,000,000 of men. The influence thence emanating reaches the remotest portions of the globe, and tends mightily to the civilization and happiness of the race.

IT is said that one part of diastase will convert into sugar 2,000 parts of starch.

SCIENCE.

The following beautiful and masculine extract is from an address delivered by Judge Black, before the Agricultural Society of Somerset Co., Pa. It gives a vivid picture of human progress in garments of the most classic beauty:

Without science, man, the ruler of this world, would be the most helpless of all animated beings. His Creator made him the monarch of the earth, and gave him dominion over it, to govern and control it; to levy unlimited contributions upon it, and convert everything in it to his own use. But he found himself at the head of a revolted empire. All its physical forces were in a state of insurrection against his lawful authority. The inferior animals were his enemies. The storms poured their fury on his unsheltered head. He was terrified by the roar of the thunder, and the lightning seared his eyeballs. He was parched under the hot sun of summer, and in winter he was pierced by the cold. The soil, cursed for his sake, produced thorns and thistles. The food that might sustain his life grew beside the poison that would destroy it, and he knew not how to distinguish the one from the other. The earth hid her minerals deep in her bosom, and guarded them with a rampart of thick-ribbed rocks. The rivers obstructed his passage; the mountains frowned their defiance upon him; and the forest spread its gloom around him, breathing a browner horror upon the dangers that beset his way. If he left the dry land, and trusted himself to the ocean, the waters yawned to engulf him, and the tempest came howling on his track.

He seemed an exile and an outcast in the world of which he was made to be the sovereign. But science comes to rescue the powerless king from his misery and degradation.—Gradually he learns from the laws of his empire, and the means by which his rebel subjects may be conquered. From age to age he accumulates the knowledge that clothes him with power, and fills his heart with courage.—Step after step, he mounts upward to the throne which God commissioned him to fill.—He holds a barren sceptre in his hand no longer. Creation bends to do him homage. The subjugated elements own him for their lord, yield him their fealty, and become the servants of his will. The mine surrenders its treasures; the wilderness blooms around him like a new Eden; the rivers and the sea bear his wealth upon their bosom; the winds waft his navies round the globe; steam, the joint product of fire and water, becomes his obedient and powerful slave; the sunbeams are trained to do his painting; the lightning leaps away to carry his messages; and the earth works with ceaseless activity to bring forth whatever can minister to his gratification.

LINING THE WILD BEE.

IT was a common thing in an early day, in all this region. The wild bee was to be found in all of the primitive forests. There were professional and amateur "Bee Liners," or hunters, in almost every log cabin "settlement." In our boyhood we have often accompanied them in the heavy forests of what is now Wyoming county.

When the summer flowers were in bloom the bee liner, prepared with a small box with a sliding glass cover, would imprison a wild bee which his practiced eye would easily distinguish from a tame or domesticated one.—In the box there would be honey or molasses that the bee would load itself with, and when it had given evidence of its readiness to depart for its forest hive, the cover would be removed, and first, upward it would take its spiral flight, to the height of forty or fifty feet, and then strike off in a horizontal air line.—This line, the place where the bee entered the forest, would be carefully observed by the bee liner, who with his open box would patiently await the return of his liberated captive, who would almost uniformly be accompanied with fellow laborers. Lighting in the box they would take on their loads and depart, one by one, making the same upward flight, and striking off on the same horizontal line. The time the bee, or bees, were absent, would determine pretty accurately the distance to the hive.—Entering the forest upon the line and pursuing it, the bee hunter, after he had gone the distance that the bees had indicated, would carefully survey the ground under each large tree to discover the debris of the hive; stop and listens for the hum of the busy workers, casting his eyes occasionally to the tops of the trees. If unsuccessful, he would go back to the starting point and repeat the "lining" process. When the bee tree was found he would put the initials of his name upon it; and "forest laws" made him its proprietor. This was summer "bee lining;" that of autumn was somewhat different.—*Niagara Democrat.*

TOBACCO AND CHILDREN.—Some folks think it is amusing to see children now-a-days, five or six years old, chew tobacco and smoke cigars. We observed a youngster on Saturday, who had not got through wearing aprons, put his hand into his pocket and take a paper of Salmon's best fine cut from which he took a chew large enough to sicken an ox.—*Jour.*

We remember an instance of this kind of precocity. Before he could talk perfectly, he would accost his father, who chewed, and who was the village Justice—"Quare, gi'e chaw 'bac." His smartness was generally rewarded, and at 17, he was a confirmed drunkard, and has lived so ever since with occasional fits of reform. He is now a pitiful loafer, fifty years old, with a fair chance of being buried by the town.—*Religious Recorder.*

WEALTH.—Talk about the enjoyment of wealth—it never was and never can be enjoyed. An abundance of money is a heap of misery. A man who owns a small house, a small farm, a small wife, a big dog, a good cow, two or three fat pigs, and three children ought to be well satisfied.

Sunday Reading.

LOOK UP.

BY J. C. MILLER.

Look up! the stars are shining
With pale and gentle ray,
Look up! no more repining—
Drive gloomy thoughts away.

Drink in the glory flowing
From choral founts of Night,
And feel your spirit glowing
With new and dear delight!

[Written for Moore's Rural New-Yorker.]

"PEACE, BE STILL."

LIFE'S journey is not a steady calm, clouds now and then obscure the light of the orb of day, and shut out the twinkling rays of the distant stars. The ocean of human existence is ruffled at times by winds of contention, and waves of adversity, as well as gently fanned by the breezes of prosperity. But in the midst of the howling tempest, there is often heard the kindly voice of the Master, saying "Peace, be still."

The young man sets out upon the journey of life, buoyant with hope, and fascinated with the charms of future glory, expectant only of enjoying the bright dreams of fortune's gilded rays. But he soon learns that the sun of prosperity does not always illumine the path of the present life, and that if he would continually enjoy the sunshine of contentment, he must not confine himself to present scenes, but must seek sublimer joys, and more enduring realities.

Does fortune smile upon his path, he hails it as the token of a beneficient Providence, and looks forward with joyful anticipations at the prospect of a rich reward, and the glorious consummation of his brightest hopes. Does adversity frown upon him, and mists of opposition beset his way, he views them as the clouds of mercy, laden with the rich showers of divine blessing, and rejoices in the assurance, that though seeming ill may now befall, yet a wiser hand controls the affairs of universal being, and that out of darkness He often brings resplendent light. Do angry passions tumultuous rise, and call for vengeance on some guilty head, he hears a voice gently, but with authority saying, "Vengeance is mine, I will repay," and with full submission he says, "I will forbear, and yield to reason her rightful sway."

And here again he sees a kindly hand, calming the turbulent waves of a troubled breast, leading him in all circumstances to cherish the spirit of benevolence and good will, and thus to become assimilated to the glorious character of the Prince of Peace. And when the terror of a guilty conscience, and the storms of Divine vengeance, threaten to overwhelm the soul in dark despair, how cheering the voice of Sovereign Mercy, whispering kindly in the sinner's ear, "Be not afraid; I am thy Saviour and Redeemer; I have ransomed thee from the power of sin, and purchased for thee a heavenly inheritance, and a crown of eternal glory."—When is waging the fierce conflict of the infernal powers, how does the sorrowing heart rejoice to hear that his Almighty Friend has won the day, and that henceforth he may exult in the assurance of conscious freedom, and eternal peace. The command of the winds and waves, and the government of a universe of worlds, reveal something of the majesty of the Supreme Ruler, but the redemption of immortal souls, and the brighter glory of the heavenly world, surpass them all in sublimity, and we can only wonder at and admire the results of Infinite Love and Almighty Power.

When furious passions fill the breast,
And vex the soul no inward rest,
How sweet to find the Prince of Peace,
A present friend, a kind release.

University of Rochester. A. D. W.

THINK.—Believe me, this world is not a world in which we can do well without thinking, and least of all, do well in the matter of our souls. "Don't think," whispers Satan: he knows that an unconverted heart is like a dishonest tradesman's book,—it will not bear a close inspection. "Consider your ways," says the word of God—stop and think—consider and be wise. Well says the Spanish proverb, "Hurry comes of the devil." Just as men marry in haste, and repent at leisure, so they make mistakes about their souls in a minute, and then suffer for it for years.

WHOLLY THE LORD'S.—The Lord poured his love abundantly into my soul while worshipping before him; and was enabled to renew my covenant, to be wholly and forever his!—O how precious are his ways to my soul, suited to my weakness, worthy of a God! I am nothing! He is all. I momentarily live upon his smiles, and dwell under the shadow of his wings; I desire nothing but to please him: to grow in inward conformity to his will, and sink deeper in humble love: to let the light of what his grace has bestowed, shine on all around, and to live and die proclaiming, *God is love.*

IN the creation of man, God began at the outside; but in the work of regeneration, he first begins within—at the heart.—*Bunyan.*

"FOR THE SAKE OF YOUR MOTHER."

Inscribed to Mrs. C——, of Penn Yan.

That kiss—"for the sake of my Mother"—
It thrills me how tenderly yet!
And many a year must be numbered,
Ere my lips the sweet token forget.
Then hast looked on the loved and the sainted—
Those dear eyes have gazed into thine,
And my spirit all tearfully kneeleth,
A pilgrim at memory's shrine!

Bending low where light foot-prints so early
Were lost on Life's darkening track—
With a hushed heart wooing each echo,
That floateth half dreamily back
From those far-away hours of childhood,
When we rambled green pathways along—
When earth's roses were dew-dropped and thornless,
And joy trilled her carnival song!

We meet for the first, and thou'rt searching,
If haply to find on my brow,
Some trace of those features relumined,
So clear on thy visionings now.
Yet 'tis long since that love-clasp was loosened—
Long years since the death-shadow fell—
For she sleepeth—that friend of thy girlhood,
Whose truth thou hast cherished so well!

She sank to her rest 'neath the grave-sod,
When the bright buds of Summer grew dim;
And the low moaning wind-harps of Autumn
Seemed wailing a funeral hymn.
By a desolate hearth there was weeping,—
But joy in the amaranth bowers;
For the home of the angels was brightened,
By the light that had failed from ours.

O, Friend of my Mother! unspoken
The thrill of thy presence to me!
O'er the green grave that *sleeth* between us,
My spirit is yearning to thee!
For by each sweet thought now op'ning
To the home where no tear-drops are shed,
It hath come to my heart like a blessing—
That kiss, for the sake of the dead!

West Bloomfield, N. Y., 1854. MARIANNA.

Trans-Atlantic Epistles,

TO COUSIN KATEY.

Communicated thro' Moore's Rural New-Yorker.

EPISTLE SIXTEENTH.

Journey from Naples northward—First Impressions of the Germans—Truthfulness of Character—German Titles—Dresden—Police—Housekeeping by Proxy—German Cookery—Great use of Onions.

Dear Katey:—From Naples we turned our faces again to the northward. A fine steamer conveyed us to Leghorn, from which place we visited Pisa and Florence, and then proceeded over the Appenines to Venice.—From Venice we went by railway to Milan, crossed the Alps by the Simplon pass, lingered a few days among the mountains and valleys of Switzerland, dropped into some of the German watering places, and are now comfortably established in Dresden for the winter. The particulars of this long journey shall be imparted at some future time, when I sit with you by your cosy fireside, and like an old soldier, "fight my battles o'er again." My letters, I fancy, will be more acceptable if they partake less of the character of reminiscences and are more occupied with the actual present.

Our first impressions of the Germans are very favorable. They seem a frank, social, friendly people, and one feels at his ease with them much sooner than with the French. The latter are very polite, overwhelm a person with compliments and professions of regard, but underneath all this apparent civility lurks a critical, satirical spirit, which is not slow to declare itself as soon as a favorable opportunity is given. Then, too, so far as we are able to observe, their regard for the truth is not of the most exalted character. We saw this strikingly exemplified in the French family in which we boarded last winter. The young lady, when receiving calls from those of her own sex for whom she professed the warmest friendship, seemed to take pleasure in answering the most insignificant inquiries in a manner at direct variance with the truth. The gentleman, notwithstanding his position as an instructor of youth, was equally unscrupulous in this respect. For example, if he wished to occupy his time in some other way than in hearing his classes in the school, he would send a note to the Principal, stating that he had a severe *migraine*, a kind of nervous headache to which he was subject, and was not able to attend to his duties. Then he would amuse himself as he chose, and afterwards relate the circumstance to his friends as a very clever performance on his part. Such we have found to a greater or less extent the character of the French with regard to truthfulness to be; and you can easily imagine, Cousin Katey, that in this respect it could not be very agreeable to persons trained up in that abhorrence of lying which, I am proud to believe, characterizes the descendants of the Puritans. The Germans seem very different in this and many other points. They are truthful, simple-hearted, and inspire confidence and friendly feeling at once. Their domestic, home life is very pleasant. The familiar "*thou*" is constantly exchanged, friendly salutations given and returned whenever one leaves the house, if it is only for an absence of a half hour. The birthday of each individual, and other family anniversaries, are celebrated, and all have some little gift prepared for these occasions. But connected with all this simplicity and *bonhomie*, and blending with them in a very odd kind of way, is a world of pride, manifesting itself chiefly in a great fondness for titles and other honorary distinctions. Persons when addressed, or when spoken of, are seldom called by their names, but by a title derived from the office they occupy or the business they follow. Thus, for instance, a gentleman would not think you were treating him with much deference and politeness if you should address him simply as "*Mein Herr*," (Sir.)—You must say Sir Professor, Sir Lawyer, Sir Physician, as the case may be, or Sir Councillor, a favorite title, which is so modified by affixes and prefixes as to embrace an almost indefinite number of professions and occupations. But the most amusing part of the whole affair is, that every lady claims and has a right to the same title as her husband, with the slight difference that a feminine termination is tacked on to it for the occasion. Thus there is Madame General-ess, Madame Privy Councillor-ess, Madame Day Book Keeper-ess, &c., &c. As an example of the unpronounceable length to which these titles sometimes run, take "*Frau Oberconsistorialdirectorin*," (Mrs. Directress of the Upper Consistory!) Why, Katey, I do not think of being satisfied myself with any less high sounding appellation than "*Frau Professorin*," (Madame Professor-ess,) or, in default of this, "*Gnadige Frau*," (Gracious lady.) And what I shall do when I get home is more than I can imagine, for as to settling down again into plain *Mrs.*, that is out of the question.

Dresden, the capital of Saxony, where we have taken up our winter quarters, is a charming city. It has been named the German Florence, and its delightful situation on the Elbe, its fine environs, and more particularly its richly stored picture gallery and the other artistic treasures which it possesses, give it some claim to this title. The police is very severe, and at the same time very efficient.—We have seen no city in all our travels where the streets were kept cleaner and in better order, or where all the little minutiæ of police regulation seemed more carefully attended to. But this commendable state of things has also its disadvantages. What would one of the free and independent citizens of the Empire State think if on entering the city of Rochester to stay for a night, a day, a week, or a month, he were compelled to appear personally at the police office, answer all inquiries that the official in attendance might choose to put to him in regard to his business, his object in coming to Rochester, the amount of his property, &c., and finally, if his responses were satisfactory, receive a formal permission to remain the specified time in the city, for which a very respectable fee must be paid? This is precisely what all strangers must do on entering Dresden, and the fulfillment of all the required formalities often gives occasion to some ludicrous incidents. For example, one gentleman who had entrusted the business chiefly to another person, received three different visits from this individual in order to have the manner in which his name was spelled distinctly understood, and finally was obliged to go himself before the police could be entirely satisfied whether a given letter was a T, or something else. Another gentleman was questioned in German with regard to his means of subsistence. Not being very familiar with this language, he did not comprehend the import of the question, and it was repeated, this time in French, with all the slowness and distinctness imaginable, "*A-vez vous les moyens-ile sub-sis-tence?*" The gentleman, a young American, *took*, and in high dudgeon at the fact being for a moment called into question, responded by hastily pulling from his pocket a letter of credit, and exclaiming, "*Voila dix mille livre sterling!*" a rather exaggerated statement of his resources, which, however, proved perfectly satisfactory to the officials, who granted the required permission of sojourn without any further delay. In 1849 there was a terrible street insurrection here, and since that time the police, both as regards strangers and the internal regulations of the city, is much more severe than formerly. The same careful oversight is extended to the most minute particulars. If a person, in crossing the bridge which connects the two parts of the city, unluckily takes the left side, a policeman immediately steps up, and without ceremony, leads him over to the other side. Police regulations are not only more severe since the insurrection, but the taxes have also been very much increased, nearly doubled, and some of the Dresdeners seem rather restive under the burden.

We have pleasant rooms not far from the centre of the *Altstadt*, (old city,) commanding a fine prospect on one side of one of the principal squares of the city,—on the other of the Botanical gardens. Our hostess is the widow of a Holland painter, and a very agreeable and well-informed lady. Our mode of living is a kind of *house-keeping by proxy*—a little different, I fancy, from anything that is to be found at home. We eat by ourselves, at our own table, in our own room, when we please, what we please, and cooked as we please, and yet I have none of the cares of a house-keeper. Are you not curious, Katey, to know how this paradox is solved? Some of our American housewives, who are continually groaning in bitterness of spirit over their cares and trials, would not be sorry to learn of some contrivance by which they could enjoy the liberty and independence of house-keepers, and at the same time the freedom from care of boarders. I will tell you how it is done in this country, but I doubt whether such a system would work well with us. I give my orders to the servant; she buys whatever is needed at the market, and then with a little oversight and assistance from the mistress, prepares our meals and serves them up at the proper time. She considers herself well paid for all this trouble, and also for her care of our rooms, doing errands, &c., with nine shillings of our money per month. Her mistress makes out our provision bill every week, and to the actual cost of the articles adds a moderate charge for the fuel used in preparing them and for her own trouble. The chief advantage of this arrangement is that we can have our food prepared as we like it, and do not run the risk of finding everything upon the table spoiled to our taste by the presence of some mysterious condiment, which imparts an indescribable and far from agreeable flavor to the most familiar dishes. My good husband is, you know, a sworn foe of tomatoes, onions, parsley, and the various other vegetables with which cooks, French and German ones particularly, season their culinary preparations.—The martyrdom to which his palate has been subjected during our travels is enough to excite the sympathy of the hardest-hearted.—Just imagine the poor man at one time calling for a beefsteak, which makes its appearance daintily garnished with onions, or, in default of these, covered with a greenish mixture which, on close inspection, turns out to be parsley. Another time he orders roast beef, *natural*; laying particular stress on the latter word, which implies that the dish shall be served up in its natural state, without the addition of any foreign ingredients. Soon it is forthcoming, and now our countenances brighten up with the anticipation of having at last something satisfactory, for the meat is fair to look upon, and we can perceive no traces of the proscribed vegetables. But alas! the first mouthful affords unmistakable evidence that if they are not bodily present they have at least infused their spirit and essence into the dish while it was in process of preparation. Onions, in particular, are the universal condiment here. They lie in wait for their shrinking victim in soups, peer out at him from roasts and stews, and sit in undisguised triumph upon beefsteaks and other similar dishes, where their presence seems an unmitigated atrocity. Why, Katey, in one of the yearly fairs of Dresden which has just taken place, onions were brought in wagons something like our hay-wagons, and loaded nearly as full. One market place was almost entirely covered with them. There were enough on a moderate calculation to convert the whole Atlantic ocean into onion soup, and I dare say every one of them were sold. The very thought of such a mass of onions brings tears to my eyes, and I forbear any further enlargement.

Yours affectionately, Minnie.

THE HONEY-MOON.

Why is the first month after marriage called the "honey-moon?" Doubtless on account of the sweet lunacy which controls the heads of the parties during that brief and delightful period. What a pity that they should ever get quite rational again! that sentimentality should give place to sentiment, sentiment to sense, love yield to logic, and fiction to fact, till the "happy pair" are reduced from the Eden of romance to the Sahara of reality—from Heaven to earth—and perhaps a peg lower! Strange as it may seem, there have been couples who have quarrelled in the first month of matrimony, and have got back to their astonished parents before the good mother had fairly done weeping (and rejoicing too) at her daughter's departure. Their "honey-moon" soured at the full of her horn, and became a moon of vinegar instead! A bad omen that! There was much sense and propriety in the text which an ancient clergyman chose for a wedding sermon. It was taken from the Psalms of David, and reads thus: "*And let there be peace while the moon endureth.*"

An Angel.—In describing the death and burial of a lovely child, a correspondent of the Ohio Cultivator gives this beautiful and touching glimpse of real life:

"But now there came a sadder moment than all; tottering with feeble step, the old grandmother, with the weight of years, had come to offer consolation to her stricken children. With wild emotion the bereaved mother leaned her head on her parent's breast, and sobbed out her grief. With holy words the old lady comforted her, and then came and bowed her head to look into that calm, infant face. 'She looks like an angel, does she not, mother?' whispered the mourner. 'She is an angel, my child,' replied the grandmother, a solemn, lofty awe overspreading her face. 'She is wiser now than any of us, for she has read the great mystery.'"

Miscellaneous.

BUILT UPON THE SAND.

BY ELIZA COOK.

'Tis well to woo, 'tis good to wed,
For so the world hath done,
Since myrtles grew and roses blew,
And morning brought the sun.

But have a care, ye young and fair,—
Be sure ye pledge with truth;
Be certain that your love will wear
Beyond the days of youth;

For if ye give out heart for heart,
As well as hand for hand,
You'll find you've played the "unwise" part,
And "built upon the sand."

'Tis well to save, 'tis well to have
A goodly store of gold,
And hold enough of shining stuff—
For charity is cold;

But place not all your hope and trust
In what the deep mine brings;
We cannot live on yellow dust
Unmixed with purer things.

And he who piles up wealth alone,
Will often have to mind
Beside his coffer chest and own,
'Tis "built upon the sand."

'Tis good to speak in kindly guise,
And soothe where'er we can,
Fair speech should bind the human mind,
And love win man to man.

But stay not at the gentle words,
Let deeds with language dwell;
The one who prides starving birds
Can scatter crumbs as well.

The Mercy that is warm and true
Must lend a helping hand,
For those who talk yet fail to do,
But "build upon the sand."

HARD TIMES.

"Times," says a mechanic, "are hard just now—indeed they are usually hard with me—for I have a family and four children to support, and work as a day-laborer at a trade.—I get twelve shillings, it is true, and receive my pay once a week; but flour is ten dollars a barrel, butter twenty-five cents a pound, potatoes a dollar a bushel, and other things in proportion. House rent and fuel, clothing and doctors' bills, (we have sickness sometimes) and the thousand and one nameless items of expense, eat away the earnings of a man's hands like a slow consuming fire."

The thousand and one nameless items are just those that eat away all the surplus of a man's earnings; a shilling here and a sixpence there, for a worthless article or an injurious indulgence, use up many a dollar of the laborer's wages. A glass of ale a day, and a couple of three cent papers of tobacco a week, make near fifteen dollars in the year. Going to the theatre now and then, losing a day in hunting occasionally, spending a night in so-called social gatherings, extravagance in dress and furniture, &c., take off vastly more of even the humblest income than those who keep no account of such things for a moment imagine.

A few dollars of a mechanic's wages kept on hand for the purpose of taking advantage of the markets and buying things in season, will save on nearly every article twenty per cent. A chilling snow storm comes on; the family are out of wood, and no teams can come in with it; so the poor or improvident mechanic goes to an unconscionable dealer, who takes advantage of his necessities and charges six dollars a cord for what ought to cost but four. He pays the grocer at the corner two shillings for a peck of potatoes, when, if he had bought by the dozen bushels of the farmer as he brought them in after the harvest, he would have got them for four shillings a bushel. He gives a shilling a pound for pork, for lard, and for ham, which he might have purchased in the hog and cured with his own hand at five cents a pound. So it is with everything, and the very absence of economy and foresight in matters of this kind will keep a perpetual clog upon the artisan's prosperity.

Live soberly, honestly, and prudently; take a thought of to-morrow what you shall eat and drink and wherewithal you shall be clothed, and provide in the season when it can be bought best and cheapest. Disregard the promptings of vanity and the desire of false display, and money can be saved out of an income which, under other circumstances, will not procure for a family anything more than the bare necessities of life.

The Moon.—The illuminating power of the light derived from the moon, according to the experiments made by Leslie, is about the 100,000 part of the illuminating power of the sun. This planet always presents the same face to us, which proves that she revolves round her axis in the same time that she revolves round the earth. A spectator on the lunar surface would behold the earth, like a luminous orb, suspended in the vault of heaven, presenting a surface about thirteen times larger than the moon does to us, and appearing sometimes gibbous, sometimes horned, and at other times with a round, full face.

Years steal along almost unnoted by mankind; infancy speedily becomes adolescent, youth merges into manhood, and manhood into old age.

SLAVING FOR MONEY.

We pity the man who wears out his energies in the accumulation of riches, which, when amassed, he will have lost the capacity to enjoy. He finds himself at the end of his labors, a guest at his own feast, without an appetite for its dainties. The wine of life is wasted, and nothing remains but the lees. The warm sympathies of his heart have been chilled by the inexorable spirit of avarice, and they cannot be resuscitated. The fountain head of his enthusiasm is sealed; he looks at all things in nature and in art with the eye of calculation; hard-matter-of-fact is the only pabulum his mind can feed on; the elastic spring of impulse—the poetry of existence is gone.

Are wealth and position an equivalent for these losses? Is not the millionnire, who has acquired wealth at such a cost, a miserable bankrupt? In our opinion there is little to choose, on the score of wisdom, between the individual who recklessly squanders his money as he goes along, in folly and extravagance, and the false economist who denies himself the wholesome enjoyments of life, in order to swell the treasure, which, in the hardening process of scraping up, he had become too mean to spend, and too selfish to give away.

The only rational way to live, is to mix labor with enjoyment—a streak of fat and a streak of lean. There is nothing like a streaky life—a pleasant mixture of exertion, thankfulness, love jollity, and repose. The man who slaves for riches, makes a poor return to that God who created him for a better purpose.—*Montgomery Ledger.*

THE ORIGIN OF TURKEY EATING.

It may be interesting to those who have been feasting upon the luxury which generally adorns the Thanksgiving dinner table, to know when and where the turkey was first used as an article of diet.

From a work recently published in London, upon the "History of Food," and which is appropriately dedicated to the genius of gastronomy—a subtle spirit, supposed to have his residence somewhere in the region of the diaphragm—we learn that the turkey was long unknown to the Greeks, there being no Turkey in Europe during their palmy days. Sophocles is the first who mentions it. In Egypt it was still more rare. It was first introduced into Rome in the year 115 before our era, where it was regarded as an object of uncommon curiosity. In a century later they had greatly multiplied, but afterwards declined again. It is said that the moderns owe their introduction to the Jesuits, who imported them from Asia or America. Hurtant asserts that the first turkey was introduced in France at the wedding dinner of Charles IX., and that it was admired as a very extraordinary thing. Bouche, the historian of Provence, declares that the French are indebted for the turkey to King Rene; and Beckman again denies its existence in France previous to the 16th century.

SENTENCE ON A JUDGE.

George, a young friend of mine, was invited to spend the day with one of his schoolmates, the son of Judge ——, who lived in a beautiful house and was surrounded by everything to entertain his young visitor agreeably.—George's sisters were sure he would have such a good time, and were on the tiptoe of expectation for his return.

"Oh, tell us all about it; how'at you enjoyed yourself grandly?" they exclaimed when he got home.

"First rate," he cried, and as soon as he got rested he began to satisfy their curiosity by giving an account of himself.

"But, mother," said George stopping short in his recital, and looking earnestly towards her, "I don't like Tom's father at all."

"Why not?" she asked.

"I don't," repeated George: "no, I am sure I don't. Some gentlemen were dining there, and Tom's father entertained us by telling his college scrapes; how he used to steal from the farmers around, steal and lie, and dodge his lessons, and make his teachers believe he was a great deal better than he really was; and he called it such good fun, and they all laughed so, for he is a funny man. But, mother, it disgusted me to see a great man like him make a mock at sin;" and the boy's fine face wore an expression of indignant pity. "Mother, I thought he lowered himself—and a Judge, too! Tom asked me why I did not laugh—Laugh! Why, I thought it was something more to be ashamed of. I could not laugh!"

GOOD AND BAD HUMOR.

There is no disposition more comfortable to the person himself, or more agreeable to others, than good humor. It is to the mind what good health is to the body, putting a man in the capacity of enjoying all that is agreeable in life, and of using every faculty without clog or impediment. It disposes to contentment with our lot, to benevolence to all men, to sympathy with the distressed. It presents every object in the most favorable light, and disposes us to avoid giving or taking offence. There is a disposition opposite to good humor, which we call bad humor, of which the tendency is directly contrary, and therefore it is malignant as that of the other is salutary. Bad humor alone is sufficient to make a man unhappy; it tinges every object with its own dismal color, and like a part that is galled, is hurt by everything that touches it. It takes offence where none was meant, and disposes to discontent, jealousy, envy, and in general to malevolence.

The Little Troubles.—It is the little troubles that wear the heart out. It is easier to throw a bombshell a mile than a feather—even with artillery. Forty little debts of one dollar each, will cause you more trouble and duuning than one big one of a thousand.

"EXCELSIOR!"

THE RURAL FOR 1855.

Having nearly completed our arrangements, we can safely announce that the Sixth Volume of the Rural New-Yorker will, extraordinaries excepted, *far surpass* either of its predecessors, in both Contents and Appearance. To redeem this pledge, no reasonable effort or expense will be wanting, for we are determined to render the paper more and more worthy its extensive *National Circulation*. In a word,—while we gladly extend the hand of fellowship to our contemporaries, for there is room for all,—we shall strive to make the Rural by far the best Agricultural, Literary and Family Newspaper published.—Thus believing and intending, we frankly ask the kind offices of each and every reader who can consistently lend a portion of influence in support of this publication. Please read the annexed announcements.

OVER $700 IN CASH PREMIUMS!

Post-Masters, Agents, Subscribers,

And others who wish to benefit themselves, and promote the interests of community, are respectfully invited to note a brief announcement,—one which is, we confidently believe, most worthy their best attention. After bending low in grateful acknowledgment to Post-Masters, their Assistants, Agents and Subscribers, whose exercise of influence has enabled us to render Moore's Rural New Yorker the *first* Journal of its class in Circulation, Influence and Popularity, we desire to communicate, in a few words, the substance of a Prize List which *far exceeds*, in both *numbers* and *value*, any of its predecessors. Relying upon *acts* rather than *words*, we proceed without circumlocution or palaver, to invite your attention to the following splendid list of OVER

$700 IN CASH

PREMIUMS FOR SUBSCRIBERS:

ONE HUNDRED DOLLARS for the largest list of Yearly Subscribers to the Rural New-Yorker—the payment to be remitted according to our Club terms, previous to the 1st day of February, 1855.

EIGHTY DOLLARS for the next (second) largest list, as above specified.
SEVENTY DOLLARS for the third list.
SIXTY DOLLARS for the fourth list.
FIFTY DOLLARS for the fifth list.
FORTY DOLLARS for the sixth list.
THIRTY DOLLARS for the seventh list.
TWENTY-FIVE DOLLARS for the eighth list.
TWENTY DOLLARS for the ninth list.
TEN DOLLARS to EACH of the *five* persons sending the 10th, 11th, 12th, 13th, and 14th lists, as above.
FIVE DOLLARS to EACH of the *five* persons sending the 15th, 16th, 17th, 18th, and 19th lists.
THREE DOLLARS to EACH of the *six* persons sending the 20th, 21st, 22d, 23d, 24th, and 25th lists.

☞ We also offer the following very liberal list of

CHRISTMAS CASH PREMIUMS.

FIFTY DOLLARS for the largest list of subscribers to the Rural New-Yorker, sent in or mailed according to our terms, on or before the 20th day of December ensuing, (1854.)
THIRTY-FIVE DOLLARS for the next largest list, as above.
TWENTY-FIVE DOLLARS for the next list.
FIFTEEN DOLLARS for the next list.
TEN DOLLARS for the next list.
FIVE DOLLARS for the next list.

☞ Persons competing for Christmas Premiums are not excluded from the February prizes, so that one person may secure *One Hundred and Fifty Dollars, in Cash!*—another *One Hundred and Fifteen Dollars*, &c.

[In order to give Post Masters, Local Agents, &c., a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competition for any of the above Premiums.]

SPECIFIC PREMIUMS.

In order to Reward every person who may aid in extending the circulation of the Rural New-Yorker, we offer to such as do not compete for any of the preceding Premiums, the following liberal gratuities for subscribers forwarded *previous to the 1st of April*, 1855:

THREE DOLLARS, in Books, or a handsomely bound volume of the Rural for 1854, for THIRTY subscribers.

To every one remitting for twenty copies ($25,) an extra copy of the Rural and either volume of the Wool Grower and Stock Register—or, The Horticulturist for 1855.

The same premium to every one remitting for FIFTEEN copies, ($20,)—for TEN copies ($15.)

To every one remitting for six copies ($10,) an extra copy of the Rural, or the Horticulturist for 1855.

For $5 we will send THREE copies of the Rural, and either vol. of the Wool Grower and Stock Register.

For $4 we will send one copy of the Rural, and either *Putnam's, Harper's, the Knickerbocker, Lady's Book*, or *Graham's Magazine* for one year.

For $3, we will send a copy each of the Rural and the Horticulturist for 1855.

$300 MORE!

As a further inducement to the friends and Agents of the Rural, we make the following liberal offer *in addition* to above Premiums:

To each of the *one hundred persons* who shall send us after this date, (Dec. 16,) the first clubs of ten or more subscribers, accompanied with the money according to terms, we will give a handsomely bound volume of the Rural New-Yorker for 1854—the cash prize of which is $3, and which will sell for that in almost any locality.—To those who cannot conveniently get the bound volume—as it will have to be called for or sent by Express, or otherwise outside the mail—we will give the Rural volume unbound, and the sixth and seventh volumes of the Wool Grower and Stock Register. ☞ Remember that this offer *is in addition to all other Premiums!*

All competitors for premiums are expected to adhere strictly to the following

TERMS, IN ADVANCE:

Two Dollars a Year. *Three Copies, one year, $5—Six Copies for $10—Ten copies for $15—Fifteen Copies for $20—Twenty Copies for $25, and any additional number at the same rate.* ☞ *As we are obliged to pre-pay American postage, our lowest Club price to Canadian subscribers is $1,50 per copy.* ☞ *To facilitate mailing, we prefer sending Club papers to one address at each post office, but the names of subscribers will be written on the papers if desired. Club papers sent to different post offices, and names can be sent in at different times. Bills of all specie paying Banks received at par on subscription.*

☞ Specimen numbers, show-bills, prospectuses, &c., sent free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE,
Oct., 1854. Rochester N. Y.

Moore's Rural New-Yorker has become a giant among its kind. With a subscription verging fast to 30,000, and with a conductor who knows how to polish it with every grace of the art, and how to accomplish it with the best talent of the age—it is not surprising that it is now the leading agricultural paper of the country.—*Christian Adv.*

RURAL NEW-YORKER

ROCHESTER, DECEMBER 16, 1854.

SPECIAL NOTICES.—TO AGENTS, &C.

☞ Agents.—Any person so disposed can act as agent for the Rural New Yorker,—and all who remit according to terms will be entitled to premiums, &c.

☞ Those who are furnishing clubs, (20 to 50 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ The Rural is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ In remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ In writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County and State. Write all names plainly.

☞ Those wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ Western Money is at present almost unsalable in this city, and we therefore request Western friends and agents to remit Eastern money—or drafts on Buffalo or New York, less the cost of exchange.

☞ Specimen numbers of the Rural cheerfully forwarded to all disposed to aid in augmenting its circulation. We will send to your own, or the address of friends, all the necessary documents—extra numbers, show bills, prospectuses, &c. It will afford us pleasure to respond to all requests to this line.

Explanatory.

Though we have received no special complaints concerning the matter, we feel bound to state, in justice to ourselves and readers, that the inferior paper upon which several numbers of the Rural have been printed of late, was used from *necessity* and not choice. The breaking of machinery in the paper-mill from which we are usually supplied, first obliged us to use such paper as could be obtained elsewhere; then, when all was right at the mill, the great snow storm interfered with transportation, and hence, although there is an abundance of good Rural print on the road, we are again compelled to use an inferior article. This is most provoking—ten times more so to us than our readers, we presume—yet "what can't be cured must be endured."

—While voluntarily at the confessional, we will explain another unavoidable imperfection. An esteemed friend and contributor calls our attention to several typographical errors in two last numbers of Rural—adding that "such things should not occur in a model paper, about harvest time." We beg to assure him, and all others interested, that nothing but severe and dangerous illness in our family has caused inattention to many matters, for some weeks—among others, the revising of proof, personal attention to correspondence, &c. Under the circumstances, we trust this allusion to private affairs is excusable,—and that as we are yet watching, even while penning this, those who are expecting to hear from us by letter will take the will for the deed, and that other shortcomings will be overlooked.

Congressional.

Congress was in session only a portion of last week, having adjourned from Thursday over to Monday. In the Senate Mr. Bright, of Indiana, was elected President, in place of Atchison, resigned. The latter gentleman was voted the Vice President's salary during the time he occupied the chair. The same standing committees as last year were continued for the present session. The bill of the last session to relinquish to Wisconsin certain saline lands therein was taken up. The House amendment thereto was agreed to, and the bill passed.

Mr. Dodge gave notice of a bill to continue improvements on Des Moines river rapids, and Mr. Cass of a bill for the construction of a channel over St. Clair Flats.

House.—Reports of the Secretaries were received and ordered printed.

Mr. Sollars offered a resolution that the President be called upon for information in regard to the conference at Ostend of the American Ministers in Europe—referred to a committee. The River and Harbor bill, vetoed by the President at the last session, was taken up, and the question being put, Will the House pass the bill, the President's veto to the contrary notwithstanding, it was decided in the negative—yeas 95, nays 80—the constitutional majority of two-thirds being required. The standing committees of last session were continued. Some other business and notices of bills were introduced, and the House adjourned over to Monday.

Government Expenses.—The enormously increased expenses of the Federal Government since its establishment, have quite out-run the calculations of prudent men. In the act of December 23d, 1791, the amount appropriated for the civil list of the United States was $328,653, Gen. Alexander Hamilton, then Secretary of the Treasury, submitted his estimate to the House of Representatives for the ensuing year in the following amounts:—For the Civil List, $328,053; Extraordinaries, $197,119; War Department, $532,449; making a total of $1,058,221.

The actual expenditures of the Government for the past year were $75,354,630, of which amount there was expended on the Civil List $1,649,384,98; War Department, $11,733,629,48; Redemption of the Public Debt, $24,336,580,66, and the balance under other appropriations.

N. Y. City vs. Country Newspapers.

The Rural New-Yorker, a Rochester paper, is the best specimen of a country newspaper that we are acquainted with. Our own subscription list in Western New York is materially curtailed by the circulation of so able a rival journal.—*New York Independent.*

Considering the able and respectable source whence it emanates, the above may be regarded as highly complimentary. And when it is remembered that the people of Gotham, and especially the editors and publishers thereof, very generally regard New York as all (or the only place in) America—like the French who speak of Paris as France—we may well feel proud that the Rural is pronounced "the best specimen of a country newspaper" with which our intelligent contemporary is acquainted; for we reckon that tantamount to saying it is the best outside, or at least west of, the Metropolis. Yet we do not altogether fancy the off-hand, condescending manner in which we are ranked at the head of *country* newspapers. "Best specimen of a *country* newspaper," indeed!—as though a paper published elsewhere, could not possibly equal those "got up" within sight and hearing of the Park and Points.

Now, for the enlightenment of those who regard New York city as "all the world and the rest of mankind"—and its newspapers as the most popular and widely circulated in the land—we will state a few facts proving that at least one inland city, located right in the "Rural Districts," is not in all respects inferior to the great emporium.

The writer is "acquainted with" a weekly newspaper published in this city, and started less than five years ago, which it is believed (on good authority) already surpasses in circulation, with only two exceptions, *any* hebdomenal issued in the city of New York,—and its subscription list *exceeds*, by from ten to fifteen thousand, that of either of some twenty of the prominent Political, Literary and Religious journals of said city, several of which have been established from ten to thirty years, and all of which claim, and are supposed to enjoy, extensive patronage, as they certainly do in the matter of *advertising*. The terms of the "Rochester paper" to which we refer are $2 a year, and its lowest club rate $1,25, (not a "dollar paper," if you please,) and yet in *one week* within the present year it had a bona fide accession of *over seven thousand subscribers*—a much larger number than was ever reported as received in an equal length of time by the *Tribune*, the most successful of all the New York weeklies. There are other items in which it is in advance of many city periodicals—among which general report places *quality of matter*, (especially in purity, reliability, and usefulness or adaptability to the wants and interests of the *country*,) and *style*, or mechanical appearance.

—These remarks are made in the most friendly spirit toward our New York contemporaries. We only wish to intimate, without the least boasting or exaggeration, that *some* things can be done *here as well*, if not even *better*, than in New York.

Synopsis of the Navy Report.

According to the Report of the Secretary of the Navy, the Home Squadron consists of one frigate, two sloops, and two steamers; the Brazil Squadron, of one frigate, one brig, one sloop, one steamer, and one store ship; the African Squadron, of one frigate, one brig, and two sloops; the Mediterranean Squadron, of one sailing and one steam frigate, and two sloops; the East India Squadron consists of three steam frigates, three sloops, and three store ships. Of these, two steamers, one sloop, and the store ships are on the way home. The Pacific Squadron consists of one frigate, one steamer, three sloops, and two store ships.

The estimates for the support of the Navy and Marine corps for the year ending June 30, 1856, and for all other objects coming under the control of this Department, are in the aggregate $16,241,031 63
From which deduct special objects, including transportation of the mail in steamships 7,324,684 22

Leaves for the support of the Navy and Marine corps $8,917,207 31
The estimate for the present fiscal year for the support of the Navy and Marine corps, was $3,351,171 19
The total amount drawn from the Treasury during the fiscal year ending June 30, 1854, as exhibited by the statement of appropriations for the Navy service, prepared by the Second Comptroller of the Treasury, was . 11,160,236 32
From which deduct re-payments 948,891 04

Gives as the total expenditure for all objects under the control of the Navy Department, 10,501,845 28
But of this amount there was expended for special objects, the sum of 3,910,012 29
Leaving the legitimate expenditures for the support of the Navy and Marine corps for the year ending June 30, 1854 . . . . . $6,891,832 99

There are, however, outstanding claims to be paid out of the appropriation for the fiscal year 1853-54. The Secretary recommends an increase of the Navy, and re-organization of the Department.

Deficit in Canal Tolls.—The tolls of the New York canals have fallen off sadly during the past season, and present a deficit below those of the preceding of over four hundred thousand dollars. Last year they reached the figure of $3,132,914, while in this they only came up to $2,706,432. If the enlargement is speedily completed, our canals may expect to win back a large portion of the trade of which they have been despoiled by the railroads; but if the snail pace of the last ten years is kept up for the future, the glory of the great ditch will soon have departed forever.

An excellent letter from our Albany Correspondent was received too late for this number.

The President's Message.

The President's message seems to have given general satisfaction, and its moderate conservative tone and spirit are commended by all prudent and right thinking men. There are some public prints and some private individuals, as there always are, who find fault; one class criticising its literary character, another dissenting from its political views, and others complaining because it breathes no spirit of filibusterism and aggression. The only point which really seems to lie open to just criticism is the untenable defence of the Greytown affair

In addition to the points given last week, we would add, that the President declines to negotiate with foreign powers in regard to the protection of neutral property on the basis of relinquishing the practice of privateering in time of war, for the following, it seems to us, conclusive reasons:

"If it were adopted as an international rule the commerce of a nation having comparatively a small naval force would be very much at the mercy of its enemy in case of war with a power of decided naval superiority. The bare statement of the condition in which the United States would be placed after having surrendered the right to resort to privateers in the event of a war with a belligerant of naval supremacy, will show that this Government could never listen to such a proposition.

"The Navy of the first maritime power in Europe is at least ten times as large as that of the United States. The foreign commerce of the two countries is nearly equal and about equally exposed to hostile depredations.

"In war between that power and the United States without resort on our part to our mercantile marine, the means of our enemy to inflict injury upon our commerce would be tenfold greater than ours to retaliate. We could not extricate our country from this unequal condition with such an enemy, unless we at once departed from our present peaceful policy and become a great naval power.

"Should the leading powers of Europe," adds the President, "concur in proposing, as a rule of international law, to exempt private property upon the ocean from seizure *by public armed cruizers as well as by privateers*, the United States will readily meet them upon that broad ground."

The President urges for an increase of the army the very just and cogent reasons, the shocking massacres practised upon the emigrants and frontier settlements by the Indians.

Out-going officers, the President says, not unfrequently carry away books and papers belonging to their respective offices, on the plea that they are private papers; and he recommends the passage of a law rendering such an act a penal offence, as frauds and peculations are often concealed by such acts, and all proofs of them thus lost to the government.

The message approves the setting aside of a portion of the public domain as a reward to faithful service in time of war, but it gives a cold shoulder to the donating of public lands to railroad monopolies, closing with a summary of our rights and duties as citizens, and an invocation of the blessing of the Almighty upon the deliberations of Congress.

We have concluded thus to notice the message, and give abstracts of some of the most interesting public documents, rather than occupy our columns by publishing them in full.

Railroad Casualties.

The recent severe snow storm has been pregnant with disasters to the railroads, using up their locomotive power in a manner quite distasteful to stockholders, sick with hope deferred while waiting for a dividend. On Monday the 5th inst. five locomotives came in collision on the Syracuse and Binghampton railroad, smashing them badly. The train from Syracuse, drawn by the engines, was proceeding south, and when near Jamesville ran into two locomotives with a snow plow attached, which were standing on the track and rendered invisible by the blinding storm. On the 6th inst. two trains on the Central straight-line road, between this city and Syracuse, came in collision near Clyde, causing a great amount of damage, but fortunately injuring no one. Each train was drawn by two locomotives, and the one going west was behind time, unknown to the conductor, in consequence of the stoppage of this time-piece. Double tracks would obviate these risky and ruinous collisions, and it is to be hoped the Central at least will complete theirs next season.

Kansas Election.—The recent election held in Kansas Territory for the purpose of choosing a delegate to Congress, has resulted in a pro-slavery triumph. General Whitfield, the so-called "Squatter," but really the slavery candidate, has been elected by a large majority.—It is asserted that a great number of Missourians, in favor of Southern Institutions, passed over into the territory for the purpose of voting. Those exceedingly wise politicians who a few months ago declared, both in and out of Congress, that Kansas must from the very nature of things be a free territory, have shown themselves about as far-seeing as owls at noonday.

Official Canvass.—The Board of State Canvassers have at last settled the question as to who is Governor, by publishing the official returns as follows:—The plurality of votes for Myron H. Clark, for Governor, is 309; Henry J. Raymond, Lieut. Governor, 28,533; Henry Fitzhugh, Canal Commissioner, 35,796; Norwood Bowne, Inspector of State Prisons, 29,162, All these were candidates on the regular Whig ticket, which is therefore successful.

Several literary notices and other articles, and a number of advertisements, necessarily deferred until next week.

News Brevities.

—Mount Hood, in Oregon, is by actual measurement 18,371 feet high.

—The great snow storm made sad havoc at Keene, N. Hampshire, blowing down barns, &c.

—The Chesapeake and Ohio Canal is frozen up, and navigation is closed for the season.

—A fire occurred at Akron, Ohio, Dec. 7th, which consumed an entire square. Loss $26,000.

—A couple of loaded canal boats were lost on Oneida lake, near Constantia, on the 3d inst.

—The Detroit Advertiser of Monday week reports John G. Saxe, the poet, at Chicago dangerously ill.

—The agricultural produce of this season in Ireland will realize £10,000,000 sterling above that of last year.

—The revenue of the Island of Cuba for the past month has increased $46,827 over that of the same period last year.

—A mine of block tin, yielding, it is said, eighty per cent. of pure ore, has been discovered in Upsher county, Va.

—The Jews in Newark, N. J., are desirous of building a Synagogue. There are two hundred Jewish families in Newark.

—The Governor General of Cuba has refused a request of the planters to disband the black soldiers.

—A premium bale of hackled hemp exhibited at the Liberty, Mo., Fair, was sold at the rate of $225 per ton.

—A barn at Chittenango, containing twenty head of cattle, was broken down by the snow and eleven cattle killed.

—The Judge of Probate at Cincinnati, during the last eleven months has issued 3,260 marriage licenses,—an average of 271 per month.

—A large number of canal boats are frozen up in the canal near Syracuse, and they will undoubtedly have to lay over for the winter.

—Gavazzi lectures dressed in a robe on which there is the representation of an open bible embroidered on the breast.

—John Mitchell, in a letter to a Know-Nothing friend, threatens to leave the country if the Know-Nothings are not stopped!

—The Iowa Telegraph states that no less than thirty thousand emigrants have crossed the ferry at Burlington, since the first of September.

—Miss Duffy, aged 18, was found dead in her bed on Monday morning of last week, in Troy. Supposed to have died from appoplexy.

—N. P. Willis was able, at the last accounts, to be thrown over his horse's head, ride home afterwards, and write an account of his sensations for the Home Journal.

—The President's Message was telegraphed, by the Morse line, through from New York to Buffalo—dropping at intermediate offices—in five hours and thirty minutes.

—Essenter and Stanley, two police officers of Baltimore, have been arrested for seizing a black boy as a vagrant, and selling him as a slave to a farmer in Carrol county.

—A sturgeon was recently caught near Stockton, Cal., and exhibited on the levee, which weighed three hundred and fifty-four pounds, and measured nine feet eight inches.

—It is stated that there are 800,000,000 human beings who use tobacco, and that the world produces annually 1,480,000,000 lbs. of this fascinating and poisonous weed.

—James J. Strange, in a letter to the Buffalo Republic, says Beaver Island furnishes to steamers 20,000 cords of wood yearly, and that the annual sale of fish amounts to $174,000.

—The schooner R. R. Johnson, loaded with wheat, went ashore at Fairport, Lake Erie, on the 4th of Dec. She broke in two, and went down with all hands, eight in number.

—Among the articles imported from foreign countries recently at New York, were 1,340 bags of copper coin, each bag containing a thousand pieces, making nearly 2,000,000 bits of metal.

—The Detroit Daily Times of Friday week was printed on a half sheet. Paper is scarce in Detroit, and its winter stock was on board the May Flower, which sunk a few days ago.

—Two demijohns filled with *water*, were expressed to Boston recently for two New Bedford ladies who were stopping temporarily in the "City of Notions," and found it impossible to drink the Cochituate.

☞ The Providence Journal says that John Howland (who died a week or two since) was the last revolutionary pensioner in that city, and "it is believed that no soldier of the revolution now remains in Providence. There are but five pensioners in this State, except widows. One, Mr. Hazard, of Newport, ninety-nine years and eight months old, has worked in his garden daily the last summer."

☞ A letter from Col. Totten, chief engineer of the Panama Railroad, states that the work will be concluded in January. He says: "I am ashamed that so much has been expended in overcoming so little, and take no credit for any engineering science displayed on the work. The difficulties have been of another nature, and do not show themselves on the line."

☞ The surveys of public lands in Oregon and Washington Territories are being prosecuted with energy. Indications of extensive mineral resources are presented in both. It is believed they will be able to afford an abundant supply of coal to our steam vessels in the Pacific. There are no agricultural lands on the globe superior to them.

☞ In the removal of a mound recently at Schenectady, for the continuance of Lafayette street, twenty-nine human skulls and parts of skeletons were found in it. From the fact that military buttons were also found, and that a barrack was located near the spot during the Revolution, it is thought to have been a burial place for soldiers.

☞ The supervisors of Schuyler county instituted a suit to stay the Commissioners from erecting the County Buildings on the site deeded to the county by Charles Cook. Various arguments were urged by the Board, but Judge Shankland overruled them all, and declared against the application.

☞ Proposals have been issued by the Cuban government for a contract for 20,000 square varas (the Spanish vara is thirty-three English inches) of Boston granite blocks, for paving the streets of Havana, for the payment of which the government will be responsible.

☞ The American Home Missionary Society needs funds; its treasury is exhausted, and it desires greatly to enlarge its operations in Kansas and Nebraska, and on the Pacific coast and elsewhere, but has not the means.

Abstract of the P. M. General's Report.

From the annual report of Postmaster General Campbell, submitted to Congress December 4, 1854, we glean the following:

The whole number of Postoffices in the United States on the 30th of June, 1854, was 23,548. Of this number 257 are offices the annual commissions from which amount to one thousand dollars and upwards, and the appointments at these offices are therefore made by the President, by and with the advice and consent of the Senate, agreeably to the provisions of the act of 1836. The number of offices established during the last fiscal year was 1,842, and the number discontinued 614, showing a net increase in one year of 1,228. The number of which the sites and names have been changed in the course of the year was 499. The number of Post Masters appointed during the year was 8,618. Of these 4,185 were appointed to fill vacancies occasioned by resignations; 1,977 by removals; 320 by deaths; 294 by change of names and sites; and 1,842 on establishment of new offices. The total number of offices on the 1st of December, 1854, was 23,925.

On the 30th of June last there were in operation 6,697 mail routes. The number of contractors was 9,167. The length of these routes is estimated at 219,935 miles.

The total annual transportation of mails was 63,387,005 miles, costing $4,630,676, and divided as follows, viz.,—21,267,603 miles by modes not specified, at $1,092,833, about 5 cents per mile. 20,890,530 miles by coach, at $1,200,695, about 6 cents per mile. 15,433,389 miles by railroad, at $1,758,610, about 11 cents 4 mills per mile. 5,795,483 miles by steamboat, at $189,138, about 8 cents 4 mills per mile.

Compared with the services of the 30th June, 1853, there is an increase of 1,494,163 miles of transportation, or about 2½ per cent., and of $134,708 cost, being about 3 per cent. The increase of railroad service is 2,446,684 miles, and the expense $157,281, being 19 per cent. in transportation, and not quite 1 per cent. in cost. The increased transportation by modes not specified is 377,157 miles, or about 1 per cent., at a cost of $37,520, or 3 35-100 per cent.

The transportation by coaches is less by 439,796 miles, or about 2 per cent., though at an increased cost of $83,137, or 6 88-100 per cent.—The unprecedented extension of railroads superseded much coach service. The increased cost for a diminished amount of such service may be accounted for from the fact that the new contracts in New England and New York, commencing 1st July, 1853, were made at largely enhanced rates, increasing the aggregate expense, while the amount of service was largely reduced.

The steamboat transportation during the past year was reduced 889,582 miles, or 15¾ per cent., at a reduced cost of $143,230, or 29 7-10 per cent.

The gross revenues of the department amount to $6,255,586.22, and the expenditures to $8,577,424.12, leaving a deficit of more than two and a quarter million dollars, seven hundred thousand of which, however, was provided by an appropriation from the Treasury in March last.

The report complains of the onerous conditions of the railroad and steamer mail service, the latter on the several United States mail steamship lines, and across the Isthmus of Panama, amounting in the aggregate to $2,023,010.29.

Synopsis of the Treasury Report.

The actual receipts into the Treasury for the fiscal year ending 30th of June, 1854, from all sources were $73,549,705, which, with the balance in the Treasury on the 1st of July, 1853, $21,942,892, give a total for the service of the year of $95,492,597. The actual expenditures for the year were $75,354,630, leaving a balance in the Treasury, on the 1st of July, 1854, of $20,137,967. The receipts for the quarter ending September 30, 1854, were $21,521,302. The estimates for the remaining three quarters of the fiscal year are $12,500,000. The amount of public debt outstanding on the 1st of July, 1854, was $47,180,516.

The Secretary anticipates a falling off in the customs receipts, owing to the Reciprocity Treaty and the short crops. The table of the tonnage of the United States exhibits an increase for the year of 385,892 tons. The table of exports and imports shows that the imports of the year were $26,331,317 in excess of the exports.

The statement as to the currency of the country gives the total amount of gold and silver coin in circulation on the 30th September at $244,000,000, against which the total Bank circulation is $204,689,209. It appears from the report on the Banks, submitted to Congress on the 6th of May, 1854, that in 1850-51 there were 879 Banks in the United States, with a capital of $227,807,533, and in 1853-54 there were 1,208 Banks, with a capital of $301,756,071, being an increase of $73,948,538. In 1850-51 the circulation of the 879 banks was $155,165,251; deposits, $128,957,712; due to other Banks, $46,411,928; and together, $330,539,891; and in 1853-54 the circulation of the 1,208 Banks was $204,689,207; the deposits, $188,188,744; and there was due to other Banks, $50,322,162; and together $443,200,113, making an increase of $112,660,222, with specie in their vaults in 1850-51 of $48,671,048, and in 1853-54 of $59,410,453, being an increase of $10,739,205.

☞ The subscriptions, in New York, to the English fund for the support of soldiers' widows and orphans, have, we learn from the Albion, reached the handsome sum of $7,750, the most of which has been remitted to England.

Stranger than Fiction.

On the evening of the 22d of November, a very aged and then unknown man was knocked down in New York by one of the 3d Avenue cars, which passed over his body, causing injuries which resulted in his death soon afterward. The day following, the Coroner held an inquest on the body, which no one recognised, and it was buried in Potter's Field at the expense of the city.

A very wealthy citizen, named John N. Norton, disappeared mysteriously about that time, and suspicions of foul play being entertained, the police were set to work to ferret out the mystery. It finally came out that the supposed pauper above described was the missing man, and after a laborious search among the nameless graves of Potter's Field, the body was discovered and identified. Mr. Norton was worth half a million of dollars, and left no children, although there are grand-children surviving, who, unless cut off by a will said to be left by the deceased, will succeed to the estate.

Foreign Intelligence.

Arrival of the Steamship Union.

The U. S. Mail Steamer Union, Capt. Adams, arrived at New York, Dec. 9, bringing four days later news from Europe, having left Havre on the 21st ult., and Southampton on the 22d.

The dispatch of reinforcements to the seat of war continues without intermission. Every available steamship was taken up by the government for that purpose. It is stated in the London Times that the British Government is now paying at the rate of three millions per annum, for the charter of steamers alone, besides the cost of fuel.

The alarm in England seemed to be subsiding as to the position of the allied armies in the Crimea. The winter campaign in the Crimea will undoubtedly take place, and wooden barracks for 20,000 men were being shipped by the British Government. A dispatch from Balaklava of the 7th Nov., received via Vienna, states that reinforcements for the allies were arriving at the rate of 1,000 men daily.

Both armies had completed their third parallels, which were connected together by means of a trench. The allies were obliged to form continuous. The minor town was strongly barricaded.

The Russian news states that the allies having received considerable reinforcements on the 5th, 7th and 8th, made a demonstration against the left flank of the Russians. The latter retired from the Platinn to the right bank of the Tchernoga.

Fifteen thousand men of the garrison of Richenoff had marched to Odessa. Prince Paskiwitch had ordered another corps of 20,000 men to the Crimea. A dispatch from Prince Meoschikuff, dated Sevastopol, Nov. 12th, states that at that date the bombardment continued. The allies, he said, had not advanced in their operations since the 8th, and were still fortifying their lines in the rear of Balaklava.

The attacking force of the Russians at the battle of the 5th November was 35,000 men.—At noon they made a sortie from Sevastopol against the French position, but were repulsed ultimately towards Inkerman, after a bloody battle, which lasted eight hours, with a loss of 9,000 men.

Gen. Canrobert was wounded. The English loss is very great. Four Generals, Catheart, Strangways, Goldier, and Lorrens, were killed, and Brown, Bentinck, Buller and Adams were wounded. Thirty-eight officers were killed, 95 wounded and two missing; 442 rank and file killed, 1,760 wounded and 156 missing. The Guards alone lost 20 officers.

The French had one general killed and two wounded; 14 officers killed and 22 wounded.—The Russians, it is said, fired on the wounded as well as on the detachments sent out to bury the dead on the 7th.

The French accounts state that everything was prepared for the assault, but the allies had determined to postpone it till the arrival of reinforcements. Prince Napoleon had left the camp, owing to the state of his health.

A dispatch from Vienna says that the Russian Envoy, Fortchakoff, has intimated to the Austrian Cabinet his willingness to negotiate for peace on the basis of the four guaranteed conditions.

Lord Raglan has been raised to the rank of field marshal. This is the first instance in which the new warrant regulating promotions for distinguished merit has been carried into effect. Lord Palmerston had arrived in Paris, and had daily interviews with the Emperor, Louis Napoleon.

A dispatch from Hamburg states that a Russian squadron of fourteen war steamers made a reconnoissance as far as Dagoe, without encountering any of the war ships of the allies. The main body of the British fleet was at Kiels on the 30th.

Cunard's New York steamers are taken up by the British Government for the war. Only the Boston steamers will run during the winter. The Collins' line has changed the day of departure from Liverpool to Saturday. The Pacific, however, left on the regular day.

Liverpool Markets.—The corn trade continues dull. A limited amount was done in wheat and flour at the quotations of Friday.—The quality of the new English flour is not liked, which tends to maintain the prices of American. Indian corn, with more liberal arrivals, is quiet—Is per qr. lower.

The quotations of Philadelphia and Baltimore flour are 44s per bbl. White wheat 12s 6d per 70 lbs. Mixed Indian corn 44s; yellow 45s; white 45s@46s per 480 lbs.

No change of importance in either beef or pork. Bacon dull and lower. Lard slow.—Sales 53s@54s per 100 lbs. Tallow quiet—64s @65s.

Nebraska.—An election of a Territorial Legislature for Nebraska will be held in a few weeks. Omaha City and Belleview are the competitors for the seat of government. It is thought that the former place, which is nearly opposite Council Bluffs, will be selected. One of the prominent Democratic candidates for Congress is ex-Lieut. Gov. Richardson, of Mich.

☞ The Journal of Commerce gives a description of the new palace residence of Dr. S. P. Townsend, the "original" sarsaparilla man, on the corner of Fifth avenue and 34th street. It has a chapel, gymnasium, picture gallery, &c. The entire cost of the building and ground is estimated at $200,000.

California News.

Arrival of the Steamship North Star.

The steamship North Star reached New York Dec. 9, bringing 309 passengers and $1,398,000 in specie, brought down by the Golden Age. California dates to the 15th November.

The U. S. brig Susquehannah arrived at San Francisco from the Sandwich Islands on the 11th ult. Commander Ringgold, and T. C. Stewart, late of the U. S. Exploring Expedition, were passengers.

The Susquehanna has gone to Benicia.

The news from the mines is cheering, lucky strikes are frequent, and most all who labor are doing well.

The steamer Golden Gate arrived Monday, the 13th, with the news, in 23 days and 10 hours from New York, the quickest time to be found on record.

Emigrants are arriving almost daily from the Plains, and report great hardships and loss of their stock on the route.

The people at Carson Valley, numbering 800, have sent a delegation to the California Legislature, applying to be set off from Utah to California, if Congress shall permit.

The financial affairs of California are in the most prosperous condition. The interest due in New York has been forwarded to the amount of $50,000.

The State Legislature will meet on the 3d of January.

The annexation feeling is very strong at Honolulu, and it is generally understood that the treaty of cession has been signed by the Ministry and King, and only await the signature of the heir apparent, who is absent, but has sent word that he was about returning, and would sign it.

Market Intelligence, &c.

Rural New-Yorker Office,
Rochester, Dec. 11, 1854.

There is greater activity in the markets than has been manifested before this Winter. The excellent sleighing now existing, brings in produce from all the country around, and the streets are literally blocked up with loads of Hay, Wood, Pork, Beef, and Poultry, to say nothing of the thousand and one other articles of produce now crowding forward to market. The prices ruling are generally satisfactory to the seller, and an immense amount of money changes hands in the course of our day's transactions. The changes in prices from last quotations will be seen by reference to the following table, as compared with that of last week.

Rochester Wholesale Prices.

Flour and Grain.		**Fruits and Roots.**	
Flour, bbl.	$10.38@73	Apples, bush.	38@50c
Wheat, bu.	$2,31½	Do. dried	76@$1,00

NEW YORK MARKET—Dec. 11.

Flour—The sales of Flour to-day have been to a moderate extent, and the market continues firm. For the best grades of Genesee holders have advanced their prices 12½@25c. per bbl. Sales at $8,25@8,50 in common to straight and good State: $8,06½@8,12½ fine choice and favorite do; $8,62½@9,12½ common to good Ohio, Michigan and Wisconsin; $9,25@9,75 extra Michigan; $9,25@10,75 do. Ohio; $10,75@11,75 do. Genesee. Canadian at $8,75@9 in bond; $9,62½@10 duly paid.

Grain—There was a good milling demand for wheat, and we also notice a fair export inquiry. Sales Canadian at $2,05; begun Genesee at $2,25; red Southern at $1,80.—The corn market is firmer with only a moderate supply offering. Sales at 92c. in store, and 93@94c. delivered, western mixed; 91@92c for old. Oats, 60@58c. State and Western.

Provisions—Market for mess Pork continues dull and depressed, with an increased desire on part of holders to realize. Prime scarce; sales at $15,37½@12,50 prime; $14,25@14,50 mess; $14,50 clear; $16 prime mess. Lard in active request for export; Sales at 10½ to 10¼@11c.—Butter continues active and firm at 12@19c for Ohio, and 20@27c for State.

ALBANY MARKET—Dec. 11.

Flour—In Flour there is nothing of importance doing. The demand is quite limited, and confined almost entirely to the consumptive demand

Grain—Wheat is wanted for milling, and some lots in store and on the line of the canal are under negotiation. A few car lots of Western mixed corn were sold at 90@91c. Good two-rowed Jefferson county Barley is held at $1,50. The last sale of Barley Malt was made at $1,53.—Buckwheat Flour is selling in the street at $4@4,12 ₩ 100 lbs. Hops—Sales to a moderate extent at $5,75@6,12 for fair to good lots. Some very choice lots have been sold at a higher figure.

NEW YORK CATTLE MARKET—Dec. 7.

At Washington Drove Yard—Offered to-day 1,433 Beef Cattle; during the week 1,640. Prices—Beeves range from 8½ to 10c per lb. Cows and Calves, $30, $45 to $75. Veal Calves, $4,50 to 7 Swine, corn fed, $4,50@5. Sheep from $3 to 10. Lambs, $2 to 3,50.

At Browning's—At market, 596 Beef Cattle, 23 Cows and Calves, 47 Veals, 4,938 Sheep and Lambs. Prices—$7,50@10 per 100 lbs. for Beeves; Cows and Calves range at from $30 to $50. Veals sold at from 5½@6c per lb. Sheep range at from $2,50 to $4,00. Lambs, $2,50 to $3,00.

At Chamberlain's—At market 450 Beeves, 114 Cows and Calves, 98 Veal Calves, 7,500 Sheep and Lambs.

Marriages.

In Lyons, N. Y., on the 10th ult., by Rev. R. Hart, Mr. W. W. MASON, of Pavilion, and Miss MARY E. WARD.

Deaths.

In Hanover, Jackson, Co., Mich., May 20th, of Dropsy and Consumption, MARTHA, daughter of William Wellington, aged 13 years.

November 18th, of the same disease, SUSAN, sister of the above, aged 21 years.

Advertisements.

Advertisements inserted in the Rural New-Yorker at 15 cents a line, each insertion,—*to be paid in advance.*—Brief advertisements preferred, and we do not wish to give any one more than four successive insertions. One space is limited, and we wish to accommodate and benefit as many applicants as possible,—at the same time interesting our readers by presenting something new, weekly.

☞ The circulation of this paper is several thousand greater than that of *any other* published in this State, out of New York city,—and we believe it largely exceeds that of any other Agricultural or similar journal (monthly, semi-monthly or weekly,) in either America or Europe.

NEW VOLUME OF

THE WOOL GROWER AND STOCK REGISTER.

The Seventh Volume of this Journal will commence with January, 1855. It will be improved in both Contents and Appearance, the Publisher having resolved to spare no reasonable effort or expense to render the work indispensable to all interested in the objects to which it is devoted. The main features of the work will be continued, with the addition of valuable important points. Each number will contain

THIRTY-TWO LARGE OCTAVO PAGES!

And be printed and illustrated in superior style. The new volume will comprise a large amount of the most useful and reliable information on the breeding, rearing and profitable management of Domestic Animals,—including Descriptions of Pure-bred Cattle, Horses, Sheep, &c., the Names and Residences of the principal Breeders and Owners of Improved Stock throughout the country, life-like Portraits of Domestic Animals, &c. Careful Reviews of the Wool, Cattle, Grain and Provision Markets are given in each number—an invaluable feature.

TERMS—Fifty Cents a Volume, (Two volumes a year.) Five Copies for $2; Eight for $3; Eleven for $4; Seventeen for $5; Twenty for $7; Thirty for $10. An extra copy free to every person forming a club of eight or more. Yearly copies (two volumes) double above rates. Club papers will be sent to different post-offices, if desired.

☞ Now is the Time to Subscribe and form Clubs. Money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

THE INDEPENDENT.

The Largest Religious Paper in the World!

Edited by Pastors of Congregational Churches in New York and vicinity.

Among the contributors to its columns are
Rev. HENRY WARD BEECHER,
Rev. GEORGE B. CHEEVER, D. D.,
Mr. CHARLES L. BRACE,
Mrs. HARRIET BEECHER STOWE,
and many other celebrated writers.

CORRESPONDENTS

from all sections of the Union, from England, France, Germany, Switzerland, Italy, and the Holy Land, contribute to enrich the columns of THIS JOURNAL.

In addition to including the largest, it is also the cheapest religious paper in the world: and being published solely with the view of advancing the cause of religious truth, it is sold at the *cost price.* Its proprietors are entirely independent of the paper as a means of support, (being engaged in mercantile business) and are determined to spare no expense to make it unsurpassed either in the variety, richness, or extent of its matter; it will be sold on the following

TERMS.—$2 per annum by mail, if paid in *advance.* Orders for the paper, accompanied by the money, addressed to the publisher, and pre-paid, will be considered at our risk.

NOW IS THE TIME TO SUBSCRIBE,

Whether you wish for the paper immediately, or at a future date. We are daily receiving subscriptions to begin January 1, 1855. Those who wish to commence then should send in their names early, and thus insure the reception of the first numbers of Volume Seventh.

Our circulation, never so large as at present, is increasing at the rate of

TWO HUNDRED AND FIFTY TO THREE HUNDRED A WEEK!!!

AGENTS.—Clergymen are authorized Agents, and are solicited to engage in the work of extending our circulation. For every five new names they may send, with ten dollars, we will forward a *sixth* copy gratis for one year.

JOSEPH H. LADD, Publisher,
256-8t Office No. 22 Beekman St., New York.

WANTED—MALE AND FEMALE AGENTS
TO SELL
IDA MAY
Throughout the United States.

This is one of the most intensely interesting stories of
SOUTHERN LIFE AND MANNERS
that have emanated from the American Press. The commendations bestowed on this book are unanimous and *hearty.* Literary men of eminence pronounce it to be a perfect gem of art, while the general reader finds in the development of the plot the most absorbing interest. Up to the fifth day after publication the order far exceeded 14,000. And the increasing demand for the book, *especially where the first copies where sold,* leads the publishers to believe that the number of readers will be unlimited.

Active and enterprising persons, possessing small means, can make a profit of from $4 to $8 per day.

Circulars giving particulars in regard to terms, can be had by addressing the publishers, post-paid.

PHILLIPS, SAMPSON & CO., Publishers.
Boston, Nov. 23, 1854. 257-2t

BOOK AGENTS WANTED,

In every County in the Union, to sell THE UNIVERSAL HISTORY OF THE WORLD FROM THE CREATION TO THE YEAR 1850, by John Von Muller. Revised and brought down to the present time, by W. H. Murray, Esq. Complete in one royal octavo volume of over 1,400 pages. Elegantly illustrated with numerous engravings from original designs, by S. W. Rowse. Any comment respecting the fitness of Mr. Von Muller for the preparation of a work of this kind will be entirely superfluous, known as he is to the literary and scientific world. It will suffice to say that the mechanical execution of the work is every way worthy of the contents, and that the book is admirably suited to the wants of the American people.

"The value of this work, as a comprehensive historical manual, has been fully tested."—N. Y. Tribune.

"We have seen no work of the kind so complete and admirable in all respects."—Providence Tribune.

Sold only by subscription. Good inducements offered to Agents. J. K. STICKNEY, Publisher,
257-3m No. 19 Westminster St., Providence, R. I.

Poetical.

SONG.

BY WM. C. BRYANT.

Dost thou idly ask to hear
At what gentle seasons
Nymphs relent when lovers near
Press the tender reasons?
Ah, they give their faith too oft
To the careless wooer—
Maidens' hearts are always soft;
Would that men's were truer!

Woo the fair one, when around
Early birds are singing;
When o'er the fragrant ground
Early herbs are springing;
When the brook-side, bank and grove,
All with blossoms laden,
Shine with beauty, breathe of love—
Woo the timid maiden.

Woo her when, with rosy blush,
Summer eve is sinking;
When, on rills that softly gush,
Stars are softly winking;
When, thro' boughs that knit the bower,
Moonlight gleams are stealing;
Woo her till the gentle hour
Wake a gentler feeling.

Woo her, when autumnal dyes
Tinge the woody mountain,
When the drooping foliage lies
In the weedy fountain;
Let the scene that tells how fast
Youth is passing over,
Warn her, ere her bloom is past,
To secure her lover.

Woo her when the north winds call
At the lattice angrily;
When, within the cheerful hall,
Blaze the fagots brightly,
While the wintry tempest round
Sweeps the landscape dreary,
Sweeter in her ear shall sound
Love's delightful story.

Rural Sketch Book.

FIRST MARRIAGE IN THE FAMILY.

A BEAUTIFUL STORY.

"Hush!" How that little word strikes upon the heart-strings, awakening all the sweet memories that had slept in memory's chambers! Our home was a "pearl of price" among homes: not for its architectural elegance—for it was only a four-gabled, brown, country house, shaded by two ancient oak trees; nor was its interior crowded with luxuries that charm every sense and come from every clime. Its furniture had grown old with us, for we remember no other, and though polished as highly as furniture could be, by daily scrubbing, was somewhat the worse for wear, it must be confessed. But neither the house nor its furniture makes the home; and the charm of ours lay in the sympathy that linked the nine that called it "Home" to one another. Father, mother and seven children—five of them gay-hearted girls, and two boys, petted just enough to be spoiled—not one link had ever dropped from the chain of love, or one corroding drop fallen upon its brightness.

"One star differeth from another in glory," even in the firmament of home. Thus—though we could not have told a stranger which sister or brother was the dearest—from our gentle "eldest," an invalid herself, but the comforter and counsellor of all beside, to the curly-haired boy who romped and rejoiced in the appellation of "baby" given five years before—still an observing eye would soon have singled out sister Ellen as the sunbeam of our heaven, the "morning star" of our constellation. She was the second in age, but the first in inheritance of that load of responsibility, which in such a household falls naturally upon the eldest daughter. The eldest as I have said, was ill from early girlhood, and Ellen had shouldered all her burden of care and kindness, with a light heart and a lighter step. Up stairs and down cellar—in the parlor, nursery or kitchen—at the piano or the wash tub—with pen, pencil, needle or ladle—sister Ellen was always busy, always with a smile on her cheek and a warble on her lip.

Quickly, happily, the months and years went by. We never realized that a change was to come over our band. To be sure when mother would look in upon us, seated together, with our books, painting and needle work, and say in her gentle way, with only half a sigh, "Ah girls, you are living your happiest days!" we would glance into each other's eyes, and wonder who would go first. But it was a wonder that passed away with the hour, that ruffled not even the surface of our sisterly hearts. It could not be always so, and the change came at last!

Sister Ellen was to be married!

It was like the crash of a thunderbolt in a clear summer sky! Sister Ellen—the fairy of the pearl stone, the darling of every heart—which of us could spare her? Who had been so presumptuous as to find out her worth? For the first moment, this question burst from each surprised, half angry sister of the blushing, tearful Ellen. It was only for a moment; our hearts told us that nobody could help loving her, who looked through her loving blue eyes into the clear well-spring of the heart beneath. So we threw our arms around her, and sobbed without a word.

We knew very well that the young clergyman, whose Sunday sermons and gentle admonitions had won all our hearts, had been for months a weekly visitor to our fireside circle, With baby George on his knee, and Georgie's brother and sisters clustered about him, he had sat through many an evening, charming hours away, until the clock startled us with the unwelcome nine o'clock warning, and the softly spoken reminder, "Girls, it is bed-time," woke more than one stifled sigh of regret. Then sister Ellen must go with us to lay Georgie in his little bed; to hear him and Annette repeat the evening prayer and hymn, her lips had taught them; to comb the long brown braids of Emily's head; to rob Arthur of the story-book, over which he would have squandered the midnight oil; and to breathe a kiss and a blessing over the pillow of each other sister, as she tucked the warm blankets tenderly around them.

We did not know how of late she had stolen down again, from these sisterly duties, after our sisters were lorked in sleep; or if our eyes and ears had never been open to the fact, we could never have suspected the minister to have been guilty of such a plot against our peace. That name was associated in our mind with all that was superhuman. The grey-haired pastor who had gone to his grave six months previous, had sat as frequently in our oaken armed chair, and talked with us. We had loved him as a father and a friend, and had almost worshipped him as the embodiment of all attainable goodness. And when Mr. Neville came among us, with his high, pale forehead and soul-kindled eye, we had thought his face also "the face of the angel,"—too glorious for the paint of mortal passion; especially, after in answer to an urgent call from the people among whom he was laboring, he had frankly told them his purpose was not to remain among them or anywhere on his native shore; that he only waited the guidance of Providence to a home in a foreign clime. After this much-bewailed disclosure of his plans, we placed our favorite preacher on a higher pinnacle of saintship.

But sister Ellen was to be married—and married to Mr. Neville. Ah! then, "Oh sister, you are going away to India," burst from our lips, with a fresh gush of sobs.

I was the first that looked up into Ellen's troubled face. It was heaving with emotion that ruffled its calmness, as the tide-waves ruffle the sea. Her lips were firmly compressed, her eyes were fixed on some distant dream—glassed with two tears that stood still in their chalices forbidden to fall. I almost trembled as I caught her glance.

"Sister! Agnes—Emily!" she exclaimed in a husky voice. "Hush! be calm! Don't break my heart! Do I love him less than—"

The effort was too much; the words died on her lips. We lifted her to bed, frightened into forgetfulness of her own grief. We soothed her, until she too wept freely and passionately, and in weeping grew strong for the sacrifice to which she had pledged her heart.

We never spoke another word of remonstrance to her tender heart, though often, in the few months that flitted by us together, we used to choke with sobbing, in some speech that hinted of the coming separation, and hurry from her presence to cry alone.

Our mother had told us the tidings with white lips that quivered tenderly and sadly.—No love is so uniformly unselfish as a mother's surely: for though she leaned on Ellen as the strong staff of her declining years, she sorrowed not, as we did, that she was going.—She was too happy in the thought that her daughter had found that "pearl of great price," in a cold and evil world—a true, noble, loving heart to guide and protect her.

Father sat in the chimney corner, reading the family bible. He was looking farther than any of us—to the perils that would environ his dearest daughter, and the privations that might come upon her life, in that unhealthy, uncivilized corner of the globe whither she was going. Both our parents had dedicated their children to God; and they would not cast even a shadow on the path of self-sacrifice and duty their darling had chosen.

To come down to the unromantic little details of wedding preparations; how we stitched and trimmed, picked and prepared—stoned raisins with tears in our eyes and seasoned the wedding cake with sighs. But there is little use in thinking over these things. Ellen was the first and foremost in all, as she had been in every emergency, great and small. Nothing could be done without her. Even the bride's cake was taken from the oven by her own fair hands, because no one—servant, sister or even mother—was willing to run the risk of burning sister Ellen's bridle cake; and she knew just how to bake it.

We were not left alone to our labors, for Ellen had been loved by more than the home roof sheltered. Old and young, poor and rich, united in bringing their gifts, regrets and blessings, to the chosen companion of the pastor they were soon to lose. There is something in the idea of missionary life that touches the sympathy of every heart that mammon has not too long seared. To see one with sympathies and refinements like our own, rend the strong ties that bind to country and home, comfort and civilization, for the good of the lost and degraded heathen, brings too strongly into relief, by contrast, the selfishness of human lives led among the gayeties and luxury of time.

The day, the hour came. The ship was to sail from B. on the ensuing week, and it must take away an idol.

She stood up in the village church, that all who loved her and longed for another sight at her sweet face, might look upon her and speak the simple words that should link hearts for eternity. We sisters all around her, but not too near, for our hearts were overflowing, and we could not wear the happy faces that should grace a train of bridesmaids. She had cheered us through the day with the sunshine from her own heart, and even while we were arraying her in simple white muslin, like a lamb for sacrifice, she had charmed our thoughts into cheerfulness. It seemed like some dream of fairy land, and she the embodiment of grace and loveliness, acting the part of some Queen Titania for awhile. The dream changed into a far different reality, when at the door of her mother's room she put her hand into that of Henry Neville, and lifted her eye with a look that said "Where thou goest will I go," even from all beside.

Tears fell fast in that assembly, though the good old matrons tried to smile as they passed around the bride to bless her and bid her good bye. A little girl, in a patched but clean frock, pushed forward, with a boquet of violets and strawberry blossoms in her hand.

"Here, Miss Nelly—please, Miss Nelly," she cried, half laughing, half sobbing. "I picked them on purpose for you."

Ellen stooped and kissed the little eager face. The child burst into tears and caught the folds of her dress, as though she would have buried her face there. But a strong-armed woman, mindful of the bride's attire, snatched the child away.

"And for what would ye be whimpering in that style, as if you had my right to Miss Ellen?"

"She was always good to me, and she's my Sunday school teacher," pleaded the little girl in a subdued undertone.

Agnes drew to her side and silently comforted her.

"Step aside—Father Herrick is here," said one just then.

The crowd about the bridal pair opened to admit a white-haired, half-blind old man, who came leaning on the arm of his rosy granddaughter. Father Herrick was a superannuated deacon, whose good words and works had won a place in every heart of that assembly.

"They told me she was going," he murmured to himself, "they say 'tis her wedding. I want to see my little girl again—and bless her."

Ellen sprang forward and laid both her white trembling hands in the large hand of the good old man. He drew near her his failing eyes and looked searchingly into her young, soul-lit countenance.

"I can just see you, darling, and they tell me I shall never see you again!" He raised his hand over her head, and repeated solemnly, "the blessing of blessings be upon thee, my child. Amen."

"Amen!" echoed the voice of Henry Neville.

And Ellen looked up with the look of an angel.

So she went from us. Oh, the last moment of that parting hour has burnt itself into my heart forever. Could the human heart bear the agony of parting like that, realized to be indeed the last—lighted by no ray of hope or eternity. Would not reason reel under the pressure?

It was hard to bear, but I have no words to tell of bitterness. She went to her missionary life, and we learned at last to live without her, though it was many a month before the little ones could forget to call on "Sister Ellen," in any impulse of joy, grief or childish want.—Then the start and the sigh, "Oh, dear, she's gone"—and fresh tears would flow.

Gone but not lost, for the first marriage in the family opened to us a fountain of happiness, pure as the spring of self-sacrifice could make it. Our household darling had linked us to a world of needy and perishable spirits—a world that asks for the energy and aid of those who remain in the dear country of their birth. God bless her and her charge. Dear sister Ellen, there may be other breaches in the family—we may all be scattered to the four winds of Heaven, but no change can come over us like that which marked the FIRST MARRIAGE.

JULIUS CESAR.

We have, fortunately, a complete-enough portrait of Julius Cæsar, and we know a good deal, though not nearly so much as it would be desirable that we knew, of his habits and mode of life. He was a tall, slender, well-made man, with a long, pale face; his brow was high, but not broad; he had dark sparkling eyes, and his mouth was rather large. "A slight pulling of the under lip," says Merivale, "which may be traced in some of his best busts, must undoubtedly have detracted from the admirable contour of his countenance."—Yet he was still reckoned handsome, and in his moments of vanity he delighted to trace his descent through his ancestor Iulus, to the love of the goddess of beauty for the mortal Anchises: while the name of his ancestress, Venus, was actually stamped on some of his coins. Michelet, in his history of Rome, has a fine picture of Cæsar. "I should like," he says, "to have seen this white and pale figure, faded before its time by the debauches of Rome, this delicate epileptic man, marching under the ruins of Gaul, at the head of his legions, swimming over rivers, or riding on horseback between the litters in which his secretaries were carried." Suetonius, in a short chapter (fifty-seventh,) has furnished the idea so beautifully brought out here. In manhood and in his latter years, the once "ill-girt boy" paid attention to the neatness of his attire.—He shaved carefully—there is no bust or coin of Cæsar with a beard—he was fond of gems and jewels, and loved a becoming magnificence in his houses. Cæsar, though his health was generally good, was subject to starting in his sleep, to fainting, and to the falling sickness, having twice been seized with epilepsy in public. This latter malady is generally found in connection with feebleness of mind, or rather tends to induce mental weakness. Merivale, in noticing the case of Cæsar, mentions that Napoleon had attacks of epilepsy. Cæsar's intellect certainly is among the very highest that ever shone upon the world. The story that Mahomet, a man of the most vigorous mind, was subject to falling sickness, is unknown to genuine history, being a fable invented by his Christian opponents. Cæsar's baldness, with the notion which the ancients attached to the falling of the hair from the head, subjected him to much ridicule. His soldiers, when they accompanied him in his Gallic triumph, with a license accorded to them on such occasions, did not fail to jeer him on this score. He tried as far as he could to conceal this defect by bringing forward his hair: and, as I have elsewhere noticed, of all the honors conferred upon him by the Senate, that which most delighted his heart was the right of continually wearing the laurel wreath round his brows.—*Classical Portraits.*

A CLEAR conscience is sometimes sold for money, but never bought with it.

A MOTHER'S SUGGESTION.

We have a friend somewhat advanced in life, who has that best certificate of ability in a mother, viz: a most exemplary family; and we are often greatly interested in hearing her tell anecdotes of her experience in bringing them up. Some of these are too good to be lost, and for the benefit of our readers we repeat one.

When our friend was yet a young mother, she had two daughters, one less than two years older than the other. The eldest, Julia, was a petite beauty, very delicately formed, with regular features, clear complexion, and bright golden ringlets. The second, Helen, was of later growth, more childlike, with less of the statuary perfection of form and feature, a paler cheek and straight hair, which obstinately refused to be curled. Her principal beauty was the lovelight in her serious contemplative face, which was not so obvious to strangers. The children were so nearly of one size, and so constantly dressed alike, that they were thought to be twins; but the younger was comparatively unnoticed.

They were constantly together, while visitors at home, and strangers abroad were daily or hourly exclaiming, "Oh, what a beautiful child! what lovely hair!" when looking at the elder sister. One day, after some ladies had passed out who had been lavish of expressions of admiration for the golden curls, the little Helen came up to her mother's side, and with an unshed tear in her eye, looked up and asked, —"Mother, is not Helen's hair pretty, too?"

This was a revelation to the mother, and taking her up, she caressed the unpraised hair, and said how beautiful it was for mother, and how mother loved Julia and Helen both alike, and how dear they were to her. But experience had taught her that she could not prevent strangers admiring and caressing the one child, while they passed the other unnoticed, and thus make the one vain and other sad.—So, after a severe mental struggle, she resolved to sacrifice the external beauty of the elder to preserve her spiritual loveliness, and in half an hour Julia's golden ringlets and Helen's straight tresses were lying side by side in a paper envelope. In speaking of it she said:

"Oh, it *did* appear so hard to cut off those curls, for I had been so proud of them; but when it was done, there was little difference in the children's appearance, and people took but little notice of them."

At the age of three years the little Helen was beautiful in her shroud, and at thirty Julia wears her curls with a different grace and humility from what she would have done had she never lost them, or been taught ever to esteem others more than herself.—*Pittsburgh Visitor.*

Wit and Humor.

HOTELDOM IN ARKANSAS.

A GENTLEMAN away off in Arkansas, who had been stopping at a cross-country tavern about two weeks, writes to a friend about the manner in which "hotel affairs" are conducted. He says:

"The regulations of the house are written in a bold, round hand, and tacked on to the door of each bed-room. The rules are rigidly enforced, and the slightest deviation is met with the penalty. Here they are:

1. Gentlemen will black their boots before leaving their rooms, or they will not be admitted to the table without an extra charge of a bit a meal.

2. Gentlemen going to bed with their boots on, will be fined a quarter for the first offence, four bits for the second, and turned out and sued for their board for the third—the landlord holding on to the plunder.

3. No person allowed to call twice for the same dish, without paying an extra bit.

4. Gentlemen not on hand at meal-times, cannot come to the table without paying an extra bit.

5. All travelers are expected to treat before leaving the house—the landlord holding on to the plunder until he comes out."—*Cor. Tel.*

FOLLOWING A PRESCRIPTION.—"I am glad to find you better," said John Hunter, the famous surgeon, to Foot, the equally famous actor, one morning. "You followed my prescription of course?"

"Indeed I did not, doctor," replied Sam, "for I should have broken my neck!"

"Broken your neck!" exclaimed Hunter in amazement.

"Yes," said Foot, "for I threw your prescription out of a three-story window."

A YOUNG KNOW-NOTHING.—*Irish Woman.*—"Arrah, Johnny, and where have you bin so long?"

Native Son.—"Why, me and the rest of the boys has been lickin' an *Irishman*."

Mother.—"Wait, ye spalpeen, till your daddy gets home, you'll be afther catching it!"

Son.—"Oh, he he blowed! *That's* the man we're licked!"

THE WORST "ISM."—"Harry," inquired a friend the other day, "which do you consider the worst of the numerous 'isms' now prevalent?" "Abolitionism?" inquired his friend.—"No." "Nativism?" "No, no." "Then I must give it up," replied he; "expound."—"Why, Rheumatism."

A VERY honest chap in Boston, who wished to sell his horse, advertised him as follows:—For sale a brown horse with a Roman nose, in good condition and very fond of traveling—having run away four times within a week."

THE man who is too poor to take a paper, has bought a slab-sided dog, an old shot-gun, and a twenty shilling gold watch. He educates his children in the street, and hoards his shanghais on his neighbors.

Youth's Corner.

ILLUSTRATED REBUS, NO. 50.

[Written for Moore's Rural New-Yorker.]

MISCELLANEOUS ENIGMA.

I AM composed of 41 letters.

My 9, 36, 25, 32, 28, 6 is a farming utensil.

My 3, 15, 18, 11, 22 is used in the dairy business.

My 10, 39, 12, 10, 21, 29 are always seen at Agricultural Fairs.

My 37, 15, 2, 17, 1, 27, 7, 21, 34, 16, 24, 38, 26, 33, 28, 23, 5 is found in the possession of intelligent farmers.

My 14, 20, 21, 35, 31, 14 is found in the office of the New-Yorker.

My 1, 8, 11, 14, 15, 29 is an instrument used by farmers.

My 15, 40, 19, 30, 9, 24 is much used in level portions.

My 9, 12, 31 expresses disconnection.

My whole is what every farmer should do.

Carmel, N. Y. J. O. C.

CHARADE.

The sun is my father, the moon is my mother,
Yet strange I resemble not one nor the other;
For though nearest a blaze, yet I never enlighten,
Nor cheer,—nay, my mother has taught me to frighten;
But I'm nearest of kin to what birthless consisted
Long ages before both my parents existed;
Full grown at my birth, in mid age I decrease,
And am biggest again just before my decease.
I run to all lengths, and scarce ever stand still;
Though a point in the mountains, the valleys I fill;
I utter no sound, though where cannons roar loud
I follow the smoke and mix with the crowd.
Though I'm given to change, yet I'll ever adore you;
Be sometimes behind you and sometimes before you;
I'm true, and I'm false, I'm in nature and art—
Show all in me of the head, but not one of the heart,
I'm poor to a proverb, such charms often grace me,
Men love all they have in the world to embrace me.
But I fly from them all quite as fast as they chase me.
So small, in a nutshell I love to remain,—
And again I'm too large for the world to contain.

SHORT-HORNS FOR SALE.

I HAVE several bull calves for sale, (two of them from first premium cows,) and all sired by my first premium Bull Hallow (11552.) I can also spare a few heifers, and heifer calves. The prices will range from $200 to $600.

253-tf S. P. CHAPMAN,
Mount Pleasant Farm, Clockville, Madison Co., N. Y.

☞ Mr. C. MOORE, of Gerry, Chau. Co., is authorized to act as Agent for the RURAL NEW-YORKER, and for the WOOL GROWER AND STOCK REGISTER, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

MOORE'S RURAL NEW-YORKER,
IS PUBLISHED EVERY SATURDAY,
BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian Agents and friends must add 25 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER

VOLUME V. NO. 51.} ROCHESTER, N. Y.—SATURDAY, DECEMBER 23, 1854. {WHOLE NO. 259.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANTS AND CONTRIBUTORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for 6 months, in advance. For reduction to Agents, and those who form Clubs, see notice on last page.

ADVERTISEMENTS,—If brief and appropriate, will be inserted at 16 cents a line, each insertion. ☞ No Patent Medicine, or deceptive adv'ts, published on any terms.

Rural New-Yorker.

Progress and Improvement.

CHANGE OF PRODUCTS.—DETERIORATION OF THE SOIL, &C.

ANY one conversant with history or tradition cannot fail to have observed the change of products in different localities and countries which has occurred through a long succession of years. These products in the aggregate increase in variety and perfection proportionately to a nation's advancement in knowledge and civilization, and vary according to soil and climate, the wants and necessities of the inhabitants, and their acquisition of the arts of civilized life. Thus, within the tropics, savage life is sustained upon the spontaneous fruits of the earth, such as the Banana, the Cocoa, and the Bread Fruit; while in more civilized communities within these regions, the bountiful soil is made, under the hand of even a moderately intelligent culture, to yield millions of pounds of rice, sugar, coffee, and all the finer fruits and spices, sufficient not only to supply their own wants, but also to furnish through commercial channels a surplus to all the rest of the world, in exchange for merchandise and manufactures.

In the more temperate regions, man in a savage state sustains his physical nature on a mixed diet of the indigenous fruits, together with animal food obtained as spoils of the chase. As civilization advances, this mixed diet continues, it is true; but grain, cultivated roots and fruits, make up the vegetable portion, while the flesh of domestic animals and fowls supersedes that of wild game. In frigid climates, animal food is the principal diet, both of savage and civilized life, and seems to be a necessity both from the demands of man's physical organization, and from the fact that the bleak climate and sterile soil can be made to furnish in any considerable quantity no other kind of food.

As the population of a region increases men are driven from necessity, if not from choice, to cultivate the soil. Nature is not spontaneously generous, although ready to respond bountifully to the culture of an intelligent hand; hence a region that would naturally sustain a very sparse population, will, under careful cultivation, give ample sustenance to immense communities of men. The products required are not only increased in quantity, but the quality is rendered vastly superior.—This takes place only under an intelligent system of tillage, for sometime, crops diminish in quantity and finally die out, or at the least yield such inadequate returns as to render their cultivation unprofitable. Thus many portions of Virginia, which only two hundred years ago were as prolific as Egypt in the palmy days of the PHARAOHS, have become nearly as barren as the present Egyptian sands. Many portions of New England produced wheat at the time of their early settlement, and for many years thereafter, which, now look to the Western States for most of their supplies of this important staple. Even Western New York is less profuse and bounteous in the growth of wheat, although the superiority of the grain in the market above all others, is still recognized by dealers and consumers.

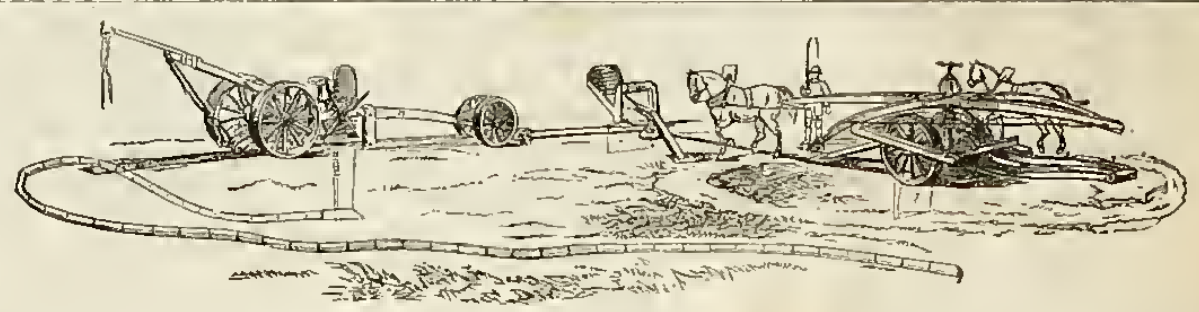
The question then arises whether this incapacity to produce any given crop after a series of years is an irremediable concomitant of cultivation, or only a direct result of improvident management. That the latter is the case, no reasonable man can doubt. Both scientific investigation and common experience prove it to be so,—the former from the fact that vegetable organizations drew a large portion of their nutriment from the air, instead of the soil; that if the whole amount of vegetable growth on a given area be returned to the soil on which it grew, that soil would continue to improve in quality and richness for an indefinite number of years, and afford nutriment to a still larger growth of vegetable organizations. This is in fact the only theory on which the rich soils of the forest can be formed, the annual falling of the leaves, and the ultimate decay of the dead wood, giving successive increments to the available portion of the soil. It is in this way, aided perhaps in part by the excrements deposited by wild fowl, that barren rocks come in time to be covered with a profuse vegetation. First, the lowest order of plants, like the mosses, cling upon the cold and sterile stone, there decay, and by their decomposition give nourishment to a higher order of vegetation, until the spot, after a succession of ages, becomes overgrown with a gigantic forest.

Experience proves the above proposition, in aid of science, from the fact that the scientific agriculturist crops his fields, and grows rich out of what he sells therefrom; and yet, by judicious management in returning in the shape of manure, a modicum of that he takes away, his fields grow better and richer instead of worse and poorer. This could not be the case if *all* the nutriment his crops received, came out of the soil; for in that event, every pound carried away, whether in the shape of grain or cattle, would reduce the richness of his fields. The inevitable tendency would then be toward barrenness and desolation, and careful husbandry would only delay—not avoid—the inevitable doom. The period at which that undesirable end would be attained, would only be one of time. Such, however, is not the fact, for as stated above, a well-managed farm continually improves. But the surplus which is removed must not be too great. Continual cropping, even in rotation, will exhaust the most generous soil at last; and that man is an ungenerous master who says to his fields continually, "give," "give," but never himself gives anything in return, nor allows them any rest.

As a general rule, it is desirable to consume most of the vegetable productions upon the farm. Let a generous portion of the hay, grain and roots be consumed by hogs and cattle, and let careful provision be made to preserve all the manure made there, in order to return to the fields a portion, at least, of what they give. In this way crops would not deteriorate. A field that produced wheat a hundred years ago, would produce it a hundred years hence; and a farm that repaid the grandfather for the care bestowed upon its cultivation, would repay the descendant.

There might be, as there have been, extraneous causes that would make the raising of some other staple more desirable and profitable, but those causes would not make the soil any less competent to raise the original production. Railroads, for instance, have turned inland grazing, and even grain farms, into milk farms. Fresh provisions are now sent from localities which a few years ago were inaccessible for such purposes. These changes in the production of a given region are legitimate and proper, and as such are a cause of congratulation; but when a change takes place simply because Nature refuses longer to honor drafts made upon her, it is the inevitable and unmistakable token of improvident and ruinous husbandry.

THAER says whoever would obtain a large and vigorous race of *Merino sheep* should keep his ewes from the rams until they are three years old. The ram, too, should not be allowed to leap till he is three years old. Will some of our sheep breeders inform us how far this opinion accords with their experience?



FOWLER'S IMPROVED DRAINING PLOW.

THE above engraving represents a valuable implement, first brought into notice at the World's Fair in London, in 1851, and there granted an "Honorable Mention." "But for the American Reapers," says the Report of the Jury, "Mr. FOWLER'S Draining Plow would have formed the most remarkable feature in the Agricultural department. You see two horses at work at the side of a field, on a capstan, which, by an invisible wire rope, draws towards itself a low frame work, leaving but the trace of a narrow slit on the surface. Passing to the other side of the field, you perceive that it has been dragging after it a string of pipes (which follow the plow's snout, that burrows all the while four feet below ground,) twisting itself like a gigantic red worm in the bowels of the earth, so that in a few minutes, when the frame-work has reached the capstan, the string is withdrawn from the necklace, and a drain has been invisibly formed under your feet." Drains forty rods long are completed at an operation. A short piece of ditch is first dug, to admit the plow, and strings of pipe, each fifty feet long, are successively added, and when done the whole of the rope is withdrawn. There is also a contrivance for making the bottom of the drain level on uneven ground. The machine is in use and is said to save about half the expense.

MANUFACTURE OF FISH MANURE.

SOME three years since a Frenchman established the manufacture of Fish Manure on the Island of Newfoundland. Last year the same gentleman, M. DE MOLON, in company with M. THURNEYSEN, formed a similar establishment at Concarneau, (Finisterre,) between L'Orient and Brest. The Imperial and Central Agricultural Society of France appointed Messrs. PAYEN and POMMIER to make an examination of this establishment, and at the last sitting of the Society these gentlemen presented a most interesting report on the subject.

The apparatus used in the manufacture consists of a steam engine of ten horse power and a steam boiler of eighteen horse power: two double coppers, hung on gudgeons, for cooking the fish by heat; twenty-four lever presses, to press the fish after cooking; a rasp similar to those used in beet-sugar manufactories; a large stove, heated by one of CHAUSSENOTS' calorifiers; and a conic mill, similar to a coffee or gypsum mill.

The fish or refuse is first put into the inner receptacle of the boiler, which contains about 1,000 lbs. The charge being completed, and the copper hermetically closed, a jet of steam is introduced between the outer and inner sides, heated to about 3½ atmospheres. The steam circulates between the two sides of the boiler, which are only about two inches apart, and into a tube 8 inches in diameter, placed upright in the inner boiler. An hour suffices to complete the cooking; when, by an easy movement, the copper is made to turn upon the gudgeons, the steam escapes, and by the removal of the lid, the cooked fish falls on the floor. It is then pressed; and afterwards rasped up as fine as possible, and the pulp conveyed to the drying room, which is of peculiar construction; but our space forbids a description. After drying, it is thrown into a mill, by which it is reduced to a powder, "perfectly dry and fine," ready for transportation and use.

The *personnel* of the establishment consists of six men and ten children; the consumption of coals 506 lbs. per day. The amount of manure made per day is about five tons. The water pressed out of the cooked fish is allowed to cool, when the oil which rises to the surface is skimmed off. One hundred pounds of fresh fish afford two and a half pounds of oil, which sells readily at about ten cents per lb. *The price charged for the fish manure is thirty-four dollars per ton.* It contains 12 per cent of nitrogen (equal to 14½ per cent of ammonia) and 22 per cent of phosphate of lime.—Good Peruvian guano contains say 16 per cent of ammonia and 25 per cent of phosphate of lime, and sells in this country at present for $50 per ton. English authorities agree in estimating the value of phosphate of lime in guano at two cents per lb. (In coprolites, apatite, animal charcoal, &c., it can be purchased for less than one cent per lb.) The 25 lbs. phosphate of lime, therefore, in 100 lbs. of Peruvian guano is worth only 50 cents, and consequently we pay $2 for 16 lbs. of ammonia. This would leave the ammonia worth 12½ cts. per lb. Applying these figures to the fish manure, its value per 100 lbs. would be

22 lbs. phos. of lime at 2 cts. per lb.	$0 44
14½ lbs. of ammonia at 12½ cts. per lb.	1 81
	$2 25

Or, when Peruvian guano is worth $50 per ton, this fish manure is worth $45 per ton. It will be seen that we have allowed nothing for ingredients of guano other than phosphate and ammonia. The fish manure would contain as much of these as the guano, and, therefore, in estimating the comparative value of the two manures, we may leave them both out of the calculation without affecting its accuracy. If Peruvian guano is worth $50 per ton, this fish manure is worth $45 per ton, and therefore is much the cheaper fertilizer, since it is sold at $34 per ton.

Messrs. DE NOLON and THURNEYSEN propose to establish factories similar to that at Concarneau on other points of the French coast, as well as on the coast of Newfoundland, and on coasts in the North Sea, which they estimate will furnish upwards of three hundred thousand tons per annum, or "at least equal to that which is extracted from the Peruvian Islands in the form of guano." The factory at Newfoundland, in its present condition, can make, it is said, 10,000 tons of fish manure per annum.

The produce of the cod-fishery of Newfoundland, reckoning the fresh fish, amounts annually, it is estimated, to 1,400,000 tons, about half of which is thrown into the sea or left to rot on the shore. This 700,000 tons of refuse fish would make 150,000 tons of powder nearly equal in value to the best Peruvian guano.*

If this were mere theory we should be inclined to look at it as the dreamy lucubrations of an unpracticed enthusiast; but we see no reason to doubt the *facts* stated in the report. The manure *is*—not can be—made, contains 14½ per cent of ammonia, and can be afforded at $34 per ton.

Science and industry present a force against which it is dangerous for any government or company to contend, and we would call the attention of the agents of the Peruvian guano monopoly to the above facts. Guano *can* be sold cheaper than fish manure; for at best we must purchase an apparatus, buy coals to work it and pay men to catch the fish; while the penguins (guano birds) catch the fish for nothing, burn off the useless carbon, and leave the ammonia and phosphates in just that concentrated state required for transportation.—If, therefore, the Peruvian Government acts wisely, it will speedily remove at least a portion of the enormous duty imposed on the exportation of guano. A small duty might be paid on guano and still compete with fish manure, but with the present unreasonable import we hope fish manure can be made so low as to run guano out of the market.

* The "dried cod-fish" used in Mr. LAWES' experiments in pig feeding, referred to in the Rural of September 23, was some of this refuse matter; and the results lead us to hope it may yet be used as food for hogs. Certainly, if it can be obtained cheap enough for manure, it can be for food, seeing that the excrements from the pigs eating it would be nearly as valuable as though it were applied directly to the soil.

FARM DIARIES.

ENS. RURAL:—Last spring you gave an article showing the necessity and benefit to farmers keeping a diary or farm-book; but as we are about to enter on a new year, I wish to remind the readers of the RURAL who are not in the habit of keeping one, that the commencement of the year is the proper time to commence. The following plan of "keeping" a diary is one which, from an experience of nearly fourteen years, I have found to answer all practical purposes:

Take about half a quire of foolscap paper, (this I have found a sufficient quantity for one year,) stitch it in a sheet of paste-board for a cover; commence at the head of the first page with the name of the month, and the year on the same line. Then rule lengthways of the page on the left hand margin a column about half an inch wide for the days of the week, (abbreviated,) and one parallel about three-eights of an inch wide for the dates in the month; then on the right-hand margin a column of about half an inch for mean temperature, (if provided with a thermometer,) and one of an inch in width for brief remarks on the state of the weather, as fair, cloudy, hazy, rainy, drizzly, snow, high winds, &c., leaving the space between the right and left-hand columns for farm transactions, &c., which will sometimes occupy several lines, thus leaving an opportunity of continuing your weather remarks, if necessary, as fair A. M., cloudy P. M., &c., down the column; then draw a stroke across the weather column just below the lower line occupied by the day's transactions. These transactions (as I call them) should comprise what you were doing—what each or all of your laborers were doing—(the laborers should be named in connection with the labor they were performing; it may some time or other save trouble)—what bargain or sale you may have made—what cash you received or paid out—from, or to whom—who were present, if any one—anything remarkable that you know of having transpired. In order to illustrate more fully the plan, I give you a sketch for the present month:

DECEMBER, 1854.

Days.	Dates.	Here write down your farm transactions and other remarks.	Weather.	Mean tem.

In the first place, however, you should have on a separate sheet an outline map or rough sketch of the farm, with all the fields and lots marked down and numbered thereon for the purpose of reference, till you get so well "posted" that you can do without it.

In recording your "transactions," set down for each day you may be hauling out manure, how many loads and what kind or condition you put on—No. 1, 2, 3 and so on, as the case may be, and when you are done, the aggregate amount; in seeding, how much seed you sow each day, of what kind, and on which field—aggregate when done; in harvest, how many dozen you have cut each day—good or bad—when done, aggregate; in threshing, how many bushels off each field (if kept separate.) The product of each field should be credited on the account book (which should be

kept) to its proper number—the seed and labor and other expenses for that product to be charged in the same manner. Fencing, tax and incidental expenses, not connected with any particular field or lot, to be charged to "Farm." Thus you may know, on "settling up" accounts with fields, the result of your labor and experiments.

To one not accustomed to keeping a diary of this kind, it may seem a great labor and a great amount of writing; but it must be recollected that all the different kinds of labor named above are not done in any one day; very probably you may have, not one day, but many days in succession the same kind of labor performed, in which case you may "cut short" after the first day, and say "same work and hands as yesterday;" after that "ditto" will answer, (with the remarks, if any are necessary,) until you change your kind of work.—Many words may be abbreviated, as com'd for commenced, fin'd for finished, A. M. for forenoon, &c. Some may probably ask "What is the use of all this stuff?" I answer, after having practiced keeping such a book as long as JACOB served for RACHEL, that I derive great satisfaction and find it entertaining to look back over volumes of former years. Incidents which I had otherwise forgotten are recalled to mind, many, very many of a pleasing and gratifying nature. Not only the incidents recorded there, but a train of incidents recur, standing in some way or other connected in the mind with it, which cannot be accounted for; but I find this often the case.

Besides this gratification, I have not unfrequently found it save not only myself but others much vexation and trouble, and consequently it has sometimes been called into requisition. "How can that be?" says one. Well, I will tell how *that* can be, and how *that* has been. I may *know*, or some one else may *positively know*, what I was doing, or where I was, or what was being done for me. That work is recorded, but the transaction, the date of which is in dispute, is not recorded in the diary, and the date is necessary to be proven. But as I or some one else knows what I was doing or having done for me, and *positively knowing* that the transaction in question took place on the same day or at the same place, is, taken together, *prima facia evidence* as to the date in question. Cases of this kind have actually occurred, and many similar ones might be adduced, but this will suffice on this head.

Without detailing all the benefits derived from the "habit" (if I may so call it) of "keeping" a record of this kind, I will still mention one, "last but not least," of them.—That is, the opportunity it affords for improvement in penmanship. A few lines every day or evening is much better than "lengthy lessons, long drawn out;" and what looks worse than the wretched, unintelligible scrawl which we often see among farmers' papers.

Washington County, Pa. O. W. A.

WHITE AND BLACK POLAND OATS.

EDS. RURAL:—I have raised the *White* Poland Oats, and also what is called by some the *Black* Poland. About the 9th of May last I sowed two acres of good soil with six bushels of seed. The ground was well plowed in the fall, and cultivated with a wheel cultivator, worked by a yoke of cattle and a span of horses together, before sowing in the spring. The cultivator was put in as deep as it would work without clogging. The oats were then sown and harrowed in. They came up very nicely, and each kind grew nearly alike till the heads began to show. The *white* headed out 4 or 5 days in advance of the other. The *black* ones grew very rank, and looked black; the straw of the *white* ones being much the lightest colored. They both grew very rank, and I confidently expected 75 or 80 bushels per acre, and thought if any oats yielded a hundred they would. But I was disappointed. The dry weather I assign as the cause. The last rain was the end of June or the first of July, and the weather afterwards being extremely hot, they ripened prematurely, causing them to weigh much lighter than I think they would had the weather been more favorable. The *white* ones were harvested with the sickle the 26th of July, and the *black* the 1st of August. I sowed two bushels of the *white*, and 4 of the *black*, and when threshed had 40 bushels of *white*, weighing about 35 lbs. per bushel, and nearly 75 bushels of the *black*. The weight of the black ones I do not know exactly, but think thirty two or three lbs. per bushel. The seed of the white ones weighed about 40 lbs., and the black 36 or 37 lbs. per bushel. I think in a good season the above weights may be fully realized. The *black* ones had much the longest heads, but the berry was much smaller, and the straw heavier, being less apt to lodge than the common oats. The straw of the *white* ones is finer and light colored, and the berry large.

I think the difference in yield is trifling, both being nearly alike in proportion to the quantity sown; what difference there is, however, is in favor of the *white* ones. Before making up my mind which variety is the most profitable, I must try them again. I would say to the "Inquiring Wolverine" a great deal has been said about Poland oats, their great weight, &c.; the only thing that I regret about them is that I did not sow them three years ago. I think they are all they are "cracked up to be." My crop this year was much better than any common oats around me by measure, and far better by weight. I think the crop this year was a paying one, although I have always thought the oat crop a poor one for a farmer to raise in this vicinity and still think so, *as far as the farm is concerned*, but as to the dollars and cents the crop pays very well.

My crop this year cost, all told, including seed at one dollar per bushel, and all expense of putting the grain in the granary, $24,25.—Twenty-five bushels sold at 95 cents per bushel (for seed) $23,75; ninety bushels remaining not sold at 45 cents, $40,50; straw, worth at least $12; total $76,25; leaving a profit on the two acres of oats of fifty-two dollars, making the oats to cost, after deducting the worth of the straw, about 11 cents per bushel. In this estimate nothing is allowed for the use of the land, which may be reckoned at 20 cents per bushel more, making the whole cost 31 cents per bushel. The extra weight is greatly in favor of the Poland oats, for they have no more hull and more meat than the common ones. E. S. HAYWARD.

Brighton, N. Y., Dec., 1854.

RAIN-WATER CISTERNS.

EDS. RURAL:—I noticed in your paper of the 2d inst, several communications on rain-water cisterns. Mr. D. C. ALLEN recommends wooden cisterns, which he says "are not only better, but in the end, cheaper than water-lime cisterns." Being of his opinion, I have recently had a wooden one constructed, and put in use. For the benefit of some of your numerous readers, who, perchance, may wish to build a cistern, I will give a short description of mine. The staves, from 4 to 5 inches wide, four feet long, were sawed somewhat tapering, from 1½ inch pine board. The bottom of the same material. The tub, or cistern, when completed, was 5½ feet across the bottom, nearly 6 feet across the top, the tub was bound with five stout, well-riveted hoops.—At the same time I procured at one of our stores, a molasses cask, gunged 150 gallons; this was placed in the ground by the side of the large cistern. The two were connected, near the bottom of the cask, by a tightly fitted inch and a half pipe. There was a layer of ten inches of small stones placed over the bottom of the cask, and a stout coarse piece of canvass spread over the stones, and three or four bushels clean sand over the canvass.—The water from the roof passes into the cask, and through the filter into the cistern, the water of which is as pure and clear as well water. The large cistern is so far under the side of the house, as to admit the lead pipe attached to the pump near the sink, passing to the bottom of the cistern without curving or bending it. It will be readily seen that the water in the cistern will be much purer by passing through the filter, than if it came directly from the eaves into it, and it will also be much easier cleaning out the small cask when necessary, than uncovering and clearing out the large one. Had I seen Mr. ALLING'S communication a few weeks sooner, I should have used clay mortar as he suggested. To preserve the hoops, (after they were set,) I applied two coats of hot tar. L. BARTLETT.

Warner, N. H., Dec. 21, 1854.

CURING HAMS, BEEF, &C.

MR. HORTON:—As I am frequently inquired of respecting my mode of curing and keeping hams, I thought that I would (if you think best) answer the inquiries through the medium of the RURAL NEW-YORKER. For 20 lbs. of meat I use one pound of salt, one ounce of saltpetre and one ounce of pepper; mix them together, and after rubbing the flesh part of the ham over with molasses, I then rub them with the mixture and lay them in my cellar where they will be secure from rats; and in about two weeks I rub them again, and in about two weeks more I rub them the third time and get on all the salt, being sure to rub the bone or small end of the ham thoroughly every time. I then smoke them at my convenience, as, if necessary, it will not hurt them to lie some weeks. After they are smoked I sack them with old cotton cloths, putting two or three thicknesses of paper over the flesh part of the ham, and then whitewash them two or three coats so as to make them secure against insects. I then hang them up on the rafters in my wood-house chamber, where the sun shines on the roof all summer, and I always find them good and ready for use at any time through the season, as I generally keep some as late as October. I think that hams will be a little more tender and sweet to let them lie some days after they are killed before they are cured.

I cure and keep my smoked beef in the same way.

Perhaps I may as well give you my rule for curing sausage meat, and you may do what you please with it. For 20 pounds of meat ½ pound of salt, one ounce of pepper and one ounce of sage. CHESTER MOSES.

Shancateles, N. Y., Dec., 1854.

MEDITERRANEAN WHEAT.

EDS. RURAL:—In the RURAL of December 2d, you desire to hear from some of your subscribers in reference to Mediterranean wheat—its productiveness—and also whether it escapes the weevil. I have sown it for quite a number of years, but have never succeeded in raising a very large crop—never to exceed thirty bushels to the acre. The first time I sowed it, was on a good wheat soil, and in the same lot with the Soule variety; the ground was prepared the same, it was sowed at the same time, and in all respects treated alike.—The result was, the Soule wheat was an excellent crop; the Mediterranean hardly worth harvesting. I was somewhat discouraged and did not sow any for some years, but at length was induced to try it again, and have sowed it every year since with better results. I have never been able to raise as good a crop of it as I have of the Soule wheat until the present season. The reason is, wheat was very badly winter killed, and the Soule wheat being the latest, was injured much more by the weevil, as is always the case with late wheat unless it is so late that the weevil are out of the way before it gets large enough for them to work into it. Mediterranean is generally out of the way, if sown in good season, before the weevil commence its ravages. From the experience that I have had in raising wheat, I have come to the conclusion that Mediterranean does not yield as much as a great many kinds of wheat to the acre, but that it is much surer as far as the weevil is concerned. S. T. H.

Brutus, N. Y., Dec., 1854.

COOKING FOOD FOR HOGS.

EDS. RURAL:—Sometime since a writer in your paper gave it as his opinion that corn meal was better raw than cooked for fattening pork. I did not concur in this, but for the sake of a satisfactory experiment, I one year ago this fall kept old corn enough to fat my pork, and used the meal raw. The result was, the pigs did not relish their food or do as well as those fed on *scalded* meal. I think cooked food is not so good as scalded food for hogs. Their natures do not require it, neither is it so palatable as when fed steaming warm.

My plan is this:—Have your barrel and kettle conveniently arranged; pour in as much meal as you wish to feed at once; then pour on boiling water enough to wet the meal through; let it stand a few minutes; then pour on cold water enough to cool it properly.—The scalding, as is readily admitted, forms an affinity between the water and meal, so that when fed the meal will not settle to the bottom. This plan I have adopted this fall, and find my hogs do much better than on raw or even cooked food. J. B. A.

Rose, N. Y., December 6, 1854.

GROUND FOOD FOR CATTLE.

I hold that great advantages result to the farmer from grinding the grains given to his domestic animals. I find it inserted in the London *Agricultural Gazette*—a work of no doubted excellence, by the way—that two horses, in every respect equal, were allowed each five pounds of oats, daily, and "hay enough"—amounting in all to seventeen pounds of feed per diem. For one of the horses, the grain was crushed, for the other not. One hundred parts of the excrements, (solid) of each horse were examined chemically, on the fourth after the experiments were commenced. The excrement from the horse fed on crushed oats contained no traces of nutritive matter, but merely woody fibre, mixed with secretions and salts. In that produced by the other animal, one quarter per cent. of nutritive matter, consisting of starch and gluten, was found; arising, indubitably, from the constitutional inability of the animal to the perfect mastication of the grain; an evil that must necessarily vary in the magnitude of its results, with age and rapidity of feeding. No difference was found in the excrement of animals fed on chopped and unchopped hay, though the facility of eating the former, and the consequently greater period of rest obtained, was a decided advantage.—*Germantown Telegraph.*

MR. BROWN'S FARMING.—The Rural New Yorker, having noticed our article on the farming of Mr. Brown, of Marblehead, asks—"Will the Cultivator inform us how the seventeen cows are kept in summer? Are they allowed to pasture on the unimproved land; and does the $7,000 include the gross receipts from the 200 acres of land, or only from the 65 acres under cultivation?" The receipts are from the 200 acres, and the cows are pastured on the unimproved land.—*Bost. Cult.*

CORN COBS.—Permit us to advise you not to sell your corn on the cob, but have it shelled, and keep the cobs for your cattle. By crushing and steaming the cobs, when mixed with cut straw or hay, they make an admirable mess for dry cattle, and if a quart of meal be added to each mess given, and made into slop, a milch cow will thrive well, and contribute generously to the pail.—*Am. Farmer.*

Agricultural Miscellany.

STATE POULTRY SHOW.—FINE FOWLS.

WE have seen no satisfactory notice of the late State Poultry Exhibition at Utica, but learn from friends present, that the show of the different varieties of improved fowls was excellent, though the attendance was not equal to the public expectation. It could hardly be anticipated, however, where the exhibition is confined to a particular class of products or subjects, that the entire community should feel the same degree of interest as is excited when everything valuable produced by the farmer is presented for notice. The show of fowls of the Asiatic varieties is said to have been unsurpassed by any former exhibition.—They were represented by American breeders of the first reputation in large numbers, and many specimens were perfect in their kind.

—A trio of Brahmas offered by J. W. HERRING, Esq., of Camillus, N. Y., took the first premiums. They were April chickens, weighed 8 lbs. each, and for form, size, and beauty of plumage, are considered the *ne-plus ultra*,—bodies of snowy whiteness—necks beautifully shaded with black—and tails short, glossy and black as the raven. We incidentally learn that this trio was purchased at a very high price by our valued friend CHAPMAN, of Madison Co., and he, no doubt, will soon give them pictorially to the public.

BEET ROOT SUGAR IN EUROPE.—In Russia the entire consumption of sugar amounts to 85,000 tons, of which 35,000 tons are made from bee root. In Germany, in 1848, the quantity of beet sugar made was 26,000 tons; in 1853 it had increased to 43,000 tons, the consumption of cane sugar decreasing in the same proportion. In Belgium the consumption of sugar is 14,000 tons, of which 7,000 tons are beet sugar, and the number of factories were nearly doubled last year. In France the annual manufacture of sugar amounts to 60,000 tons, which is about half of the quantity consumed.

MULES.—A French writer says:—"The mule is peculiarly adapted to every species of agricultural labor. He lives much longer than the horse, he is much more abstemious, stronger, and capable of supporting the greatest fatigue. His only faults are that he costs more; that his foot is straighter and narrower, and consequently sinks deeper into plowed land, and that he is apt to become vicious when ill-treated by the persons who have the care of him. Notwithstanding these inconveniences, the mule will always be found exceedingly useful in agricultural labor."

DE SAUSSURE says powdered charcoal surpasses all substances in the power it possesses of condensing ammonia within its pores, particularly when it has been previously heated to redness. Charcoal absorbs 90 times its volume of ammoniacal gas *which may be again separated by simply moistening it with water.* Decayed wood, according to LEMAN, approaches very nearly to charcoal in this power; decayed oak wood absorbs 72 times its volume, after having been completely dried under the air pump.

PROFESSOR WILSON, known to our readers as the English Commissioner to the New York Exhibition, has been appointed to the Chair of Agriculture in the Edinburgh University, vacated by the retirement of Prof. LOWE. There were several candidates, but we understand that the coolest was principally between Mr. WILSON, ROBERT RUSSELL, Esq., (who is at present on a tour in this country,) and J. C. MORTON, the agricultural editor of the *Gardeners' Chronicle.* The appointment appears to give general satisfaction.

JAMES B. ALDRICH, Rose, N. Y., writes us that two years ago last fall he picked from one stalk *four thousand and sixteen* kernels of buckwheat. They were counted accurately.

CARROTS FOR MILK AND BUTTER.—It is only a few years since we had various recommendations for coloring butter in a deep golden yellow, by grinding up and mixing in the pulp of the orange carrot, but the best way that we found for giving the carrot color, was to pass these roots first through the cow. We have, with nothing more than an average decent cow, made seven pounds of butter per week, much resembling the best grass butter, besides using a small portion of the milk daily on the table. This was accomplished by the use of about a peck and a half of the white variety per day. We hope such of our readers as can, will experiment in the use of this root, the present winter, and let us know the result.—*Albany Cultivator.*

DOMESTIC GUANO.—If ten millions of dollars are paid out of the United States annually for imported guano, is it not time for farmers to commence the manufacture of domestic guano, if, as it is said, every family of four persons may make a ton, by saving what is now thrown away.

FARMERS' CLUBS.

THE evenings are now getting longer, and the farmer having finished up his husking, finds leisure to improve his mind and his social abilities, by reading and visiting among his neighbors. Through the spring and summer, and the early part of the fall, the days are long, and the exertion of laboring from sunrise till dark unfits him, in a measure, for the enjoyment of social visits, or conversation, but now his labor is light, and he finds many opportunities to sit down and take up a paper, or a book, without the thought before him that he is idle, when his crops are suffering from his neglect.

This is particularly the case in the long evenings at this season of the year, and we hope that they will be improved by our farmers, interchanging ideas and thoughts upon the systems of raising crops, the best crops to be raised, and the best time and depth for plowing, and all the various questions arising as to the details of farming, upon which there always have been two or more sides, with parties to contend for each.

Every farmer wishes to carry on his farm in a way that will, for the labor bestowed by him, pay him the best wages. In order to obtain this end, it is necessary for him to gain all the knowledge he can, in regard to the business in which he is engaged. This can properly be done better by establishing town farmers' clubs, than in any other way. Let some of the best and most enterprising farmers in each town start the subject, call a meeting, at which there will be a greater or a smaller attendance, as there is more or less interest felt in the subject, let them adopt a short and simple code of by-laws, and agree to meet once a week, for the discussion of practical questions, relating to agricultural subjects, at a central place, and we think, that while the members would be benefited by such a course, the whole town would gradually acquire an interest in the subject, that would be seen in the better management of the farms.

A farmer to succeed in his business, wants not only all the information he can acquire, individually from his own trials and experiments, but also all the knowledge to be obtained, from the experiments and acquired knowledge of others, and this he cannot gain if he remains at home. He must go out among his brother farmers, be willing and desirous to impart and receive all that he knows, or can learn, and this can be done more easily by establishing farmers's clubs, than in any other way.—*Granite Farmer.*

THE FIELD ROLLER.

IN our visits to different sections of the country, we notice that many farmers are yet without this important implement of husbandry. We advise all such to provide one before the commencement of another season's operations. Properly used, it is of great utility on any farm. Some persons suppose that it can only be used to advantage on light soils; but its use is far more beneficial on heavy soils than on light ones. Heavy soils break up in lumps, and the roller may be made to crush them and produce a seed-bed of the requisite fineness. A clod-crushing roller would be best, but any one of sufficient weight will answer a good purpose. Used alternately with the harrow, the work in most cases can be well done, but the roller should not be passed over the ground last, as it would leave the surface so compact as to form a hard crust. Even on light soils, it is better to use a light bush-harrow after the roller has given considerable impression. The surface is less likely to be irregularly broken by rains, as the harrow leaves it in such a way that the water strikes more immediately into the earth at the spot where it falls.

Grass grounds, and sometimes winter grain, are benefited by being rolled in spring, after the frost is out. Roots of grass and grain are raised out of the ground by the heaving action of frost, and this exposure not only weakens the growth, but leaves the surface uneven and in an unfit state for the scythe.—If the roller is put on when the soil is in just the right consistency, the team will not pooch it, and the implement will effect a smooth surface and promote the vigor of the plants.

Rollers are made of wood, iron, or stone.—We cannot say which is on the whole cheapest. Any farmer can make one of wood, and if housed when not in use, it will last an age. The mode of making them of plank in the form of a large cylinder is best, as the diameter or height of the implement insures an easier draft and more direct pressure on the soil. A joint in the centre is an advantage, as it facilitates turning, without disturbing the surface of the soil.—*Boston Cultivator.*

HOW MUCH LIME DO SOILS NEED?—We have lately had occasion to remark (see our paper of Nov. 12th) that less lime is needed in soils than many suppose. Prof. EMMONS, in his Report on the Geological survey of North Carolina, says—"If we may appeal to observation and experiment, it is established that a small per centage of lime only is necessary to the highest degree of fertility; and yet this small per centage *is necessary.* If there is present one-half of one per cent. it seems to be sufficient; for it is rare to find a larger quantity in productive soils." Prof. E. is a chemist and geologist of long experience, and was one of the first (perhaps the first) to ascertain that some of the most productive soils for wheat in Western New York contain comparatively little lime.—*Boston Cultivator.*

HOGS DYING WITH CHOLERA.—We learn that within the last week the firm of Wicks, Horton & Co., have lost from eighty to one hundred hogs at their distillery, situated at the outlet of the Skaneateles, one mile and a half north of this village. The disease is said to resemble the cholera—they vomit up a green substance and soon die. They bury their carcasses in trenches. The loss is considerable.—*Skaneateles Democrat.*

Orchard and Garden.

HINTS AND CLEANINGS.

The Blackberry.—This delicious fruit can be grown in the garden as readily as in the hedge or woodland thicket. Set the plants in rows five feet apart—keep the ground free from weeds, and mulch in the fall with leaves or saw-dust, adding a quantity of ashes when this covering is dug in early in spring. The same care is necessary as with the raspberry in regard to pruning and supporting the canes, and the crop is as sure and as bountiful.

Planting Orchards.—On this subject "a reader" of the N. E. *Farmer*, well remarks that on most "old land" the use of some kind of compost in planting, to give the tree a start, is essential. Mud or muck, mixed with ashes, lime, salt, plaster, leaves, &c., or piled up alone to "slack" a few months before being used, will put the inches on the ends of the twigs and on the body of the tree, the first year. A great many apple trees have been "set" within a few years past; yet a person will see but few thrifty young orchards, in a trip of a hundred miles in any part of New England. These remarks are equally applicable all over the country.

Market Apples.—Say what people will, there are few better apples which the farmer can grow for the market, than the *Rhode Island Greening* and the *Esopus Spitzenburgh*. We notice in the Report on Fruit, made at the Herkimer County Fair in 1853, and published in the last State Transactions, that they are the favorites in that county, as they are wherever they flourish in perfection. That there are other good apples we do not deny, but these are among the best and most productive in Central and Western New York.

DOUBLE SWEET WILLIAMS.

For the last five years I have been collecting and growing all varieties of *double-flowered Sweet Williams* I could obtain. I now have upwards of fifty very dissimilar and beautiful varieties, varying in gradation from a white ground spotted with red, crimson, and purple, through the various shades of pink, rose, lilac, purple, scarlet, and crimson. I need not attempt to eulogize the flowers of this beautiful and lovely tribe; all admire Sweet Williams, and especially the double kinds. By proper attention to culture, I have my flowers not only very double, but three-quarters of an inch across; and these produced in fine corymbous heads, give a fine effect, especially so when the fine colors are so distinctively arranged as to have the best contrast. They are beautiful, whether grown in masses or singly, and well merit a situation in every flower garden.

Two years ago I had about twenty varieties; and procuring from Germany a packet of seed, saved from the best varieties grown by a celebrated florist, who had paid much attention to these flowers, I have been so successful as to increase my stock of real double-flowered to fifty-seven very distinct kinds.

I grow mine in a good, moderately rich, loamy soil, upon a dry subsoil. I increase them by taking off slips in July; these soon strike root in pots placed under a hand-glass, or in a frame, inserting them in a moist, yellow sand; they would most likely root as well in sandy loam or sandy peat. I pot them singly towards the end of September, and keep them in a dry cool frame during winter, turning them out entire at the end of March.—*Cor. of Floricultural Cabinet.*

EFFECT OF FROST ON VEGETABLES.

As the season is at hand when greenhouse and other plants are liable to injury from *frost*, it may not be unwise to devote a few moments to the consideration of the manner in which it affects plants and the best means of avoiding its influence.

It is not the *freezing* that does the injury. This really renders the things frozen warmer, by developing the latent heat of its watery parts. The *thawing* of the frozen water is what we have to guard against. In all thawing the solid substance, as ice, takes up from surrounding bodies, or from the air, the heat necessary to render it liquid, and as soon as the process is commenced, by the sun's rays or otherwise, it is continued by obtaining a part or the whole of the required heat from neighboring bodies; this loss of heat causes the bad effect. If we freeze the ear no harm is necessarily done. If we go near a fire, or in any other way produce a rapid thawing, we are liable to lose the whole or parts of the organ, because the heat of the flesh is rapidly abstracted. If, on the contrary, we apply snow to it, we render the melting process so gradual that the flesh is not injured by the loss of heat. Many other instances of a similar character might be given were it necessary. The same rule holds good in the case of plants. When their leaves or fruit are frozen, all that is necessary is to apply snow, cold water, &c., or in some other way to prevent the rapid thawing of their ice. By attention to this point many valuable plants may be saved from the ravage of frost. In cold climates delicate trees or vines may be planted on the northwest slopes of hills, or on the same sides of fences or houses, and the tempering of the heat of the morning sun will prevent them from being injured by the rapid extraction of their frost.—*N. Y. Eve. Post.*

The bank where the wild thyme grows has declared a dividend of ten *scents* on the share.

Domestic Economy.

HEMORRHAGE OF THE NOSE.

On reading a few days since on account of a person dying in your city of hemorrhage of the nose, I was reminded of a duty I owed the public, and which I had too long neglected, that of publishing what I think is a sovereign remedy for that difficulty. It is a remedy of my own discovery, and should be universally published, and preserved by every reader, for no one knows how soon they or some of their friends may stand in need of the use of it:—Take as strong a decoction of white oak bark as you can conveniently make, and saturate it well with sugar of lead, and with a swab fastened to a small stick of four or six inches in length, you can carry this liquid fully through from the nostril to the top of the windpipe, and in doing which you are sure of applying some of this liquid to the ruptured blood-vessel, and if anything will stop the bleeding, this is sure to. It should be thoroughly applied six or eight times a day.—Some five years since, I accidentally ruptured a blood-vessel in my nose, from which I bled at least three gallons in four or five days, notwithstanding all the efforts of skillful physicians whose remedies of application produced little or no salutary effect, but on the application of the above remedy, the bleeding was thoroughly stopped in twelve hours, and I have had nothing of the kind since.

Dorastus Lawrence.

Marcellus, Dec. 6, 1854.

TO CURE A FELON.

A felon generally appears on the end of the fingers and thumbs; it is extremely painful for weeks and sometimes months, and, in most cases, cripples or disfigures the finger or thumb that falls a victim to it. But it can be easily cured if attended to in time. As soon as the pain is felt, take the white skin of an egg, which is found inside of the shell; put it round the end of the finger or thumb affected, keep it there until the pain subsides. As soon as the skin becomes dry it will be very painful, and likely to continue for half an hour or more, but be not alarmed. If it grows painful, bear it; it will be of short duration compared to what the disease would be. A cure will be certain.—*Exchange.*

[As felons are very painful, any remedy to relieve a person from their excruciating pain is valuable. We do not know whether the above is all that it pretends to be or not, but within the past year we have known of the spinal marrow of an ox or cow applied by three different persons, with the most satisfactory results, in relieving the pain and securing a speedy cure of their felons. This, we are confident, will be very useful information to many persons. The spinal marrow should be applied fresh every four hours for two days.—*Scientific American.*

To Keep Celery.—Celery should be taken from the trenches before the ground freezes hard. If to be kept in a cellar, it should be one kept not much warmer than just above the freezing point. Make a ridge of earth on one side of the cellar, next to the wall, on an angle of forty-five degrees. Then proceed to lay the celery close together in a row. Place about an inch of dirt over the layer of celery, and then another layer, and continue until all is snugly stowed away. There should be a sufficient quantity of dirt to keep the roots and stalks from touching each other. It may be taken out at any time during the winter. It may be kept in the open ground by placing over the celery sufficient straw or coarse manure to keep it from the frost. We prefer the former plan as the most safe.

Light Suppers.—One of the great secrets of health is a light supper, and yet it is a great self-denial, when one is hungry and tired at the close of the day, to eat little or nothing.—Let such a one take leisurely a single cup of tea and a piece of cold bread with butter, and he will leave the table as fully pleased with himself and all the world, as if he had eaten a heavy meal, and be tenfold the better for it the next morning. Take any two men under similar circumstances, strong, hard-working men, of twenty-five years; let one take his bread and butter with a cup of tea, and the other a hearty meal of meat, bread, potatoes, and the ordinary et ceteras, as the last meal of the day, and I will venture to affirm, that the tea-drinker will outlive the other by thirty years.

Coldslaw.—Cut a hard white head of cabbage in two, shave one half as finely as possible, and put it into a stew-pan with a bit of butter the size of an egg, one small tea-spoonful of salt, and nearly as much pepper; add to it a wine-glass of vinegar; cover the stew-pan, and set it over a gentle heat for five minutes; shake the stew-pan about; when heated thro' turn it into a dish, and serve as a salad.

To make Custard.—Take a quart of milk, the yolks of six eggs; beat the eggs, and stir in the milk: put it in a pan, and let it come very nearly to a boil, but not boil; sweeten to suit the taste, put a little grated lemon in; beat the white of the eggs to a froth, pour boiling water over it to cook it, and then put on the top of the custard.

Substitute for Cream, in Tea, or Coffee.—Beat the white of an egg to a froth, put to it a very small lump of butter, and mix well. Then turn the coffee to it gradually, so that it may not curdle. If perfectly done, it will be an excellent substitute for cream. For tea, omit the butter, using only the egg.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office, For the week ending Dec. 5, 1854.

Aaron H. Allen, of Boston, for improvement in seats for public buildings.

Gardner S. Blodgett and Paul T. Sweet, Burlington, N. J., improved oven for baking.

P. Clark, Rahway, N. J., for improvement in steam boiler alarms.

Horace J. Crandall, East Boston, improved arrangements for reefing top-sails.

Joseph D. Crowell, Boston, improvement in steering apparatus.

Joshua Gray, Boston, for rotary pump.

John T. Hammitt, Philadelphia, improvement in railroad switches.

Samuel B. Kittle, of Buffalo, improvement in railroad switches.

John Lilley, Birkenhead, Eng., improvement in machinery for separating the fibre from the woody portion of tropical plants. Patented in England, July 21, 1853.

Leonard F. Markham, Cambridgeport, improved machine for rounding the back of books.

Obadiah Marland, Boston, improvement in paper-making machines. Patented in England September 28, 1854.

William H. Miller, Brandenburgh, Ky., improvement in wash-stands.

Henry R. Miller, Louisville, improved mill for shelling and grinding corn.

Wm. H. Plumb, New York, improved machine for crushing ores.

John A. Robling, Trenton, N. J., improvement in steam boilers.

Michael Shimar, Union Township, Pa., improvement in railroad car brakes.

James E. Simpson, East Boston, for improvement in dry docks.

Thomas J. Sloan, New York, improvement in casting metal window sashes.

David G. Smith, Carbondale, improvement in running gear of railroad cars.

Mathew Stewart, Philadelphia, improvement in the manufacture of brushes.

Amasa Stone, of Philadelphia county, for method of extinguishing fire in accessible places.

Thomas T. Tasker, Philadelphia for mode of regulating the furnace of hot water apparatus.

James Taylor, Newark, N. J., improvement in covering cotton thread with wool.

Wm. D. Titus, Brooklyn, for improvement in lanterns.

Ellis Webb, Parkersville, Pa., for hydraulic ram.

Elbridge Webber, Gardiner, Me., improvement in churns.

Cyrenus Wheeler, Jr., Poplar Ridge, N. J., improvement in grain and grass harvesters.

Franklin Darracott, Boston, assignor to Geo. Darracot, of same place, improvement in dry gas meters.

John Pepper, Jr., Portsmouth, N. H., assignor to the Franklin Mills, Franklin, N. H., improvement in knitting machines.

Joshua Register, Baltimore, assignor to Elias Clampitt and Joshua Register, of same place, improved lubricating apparatus.

Jno. W. Cochran, New York, improved quartz crusher. Patented in England, Nov. 21, 1853.

Calcium Light. — Mr. Robert Grant, of New York, has been for several years endeavoring to perfect the Calcium Light as an illuminator for light-houses; and some recent experiments on the Latting Tower would seem to indicate some prospect, at least, of *brilliant* success. The Latting Tower is a public observatory, erected in the upper part of the city, the top being just 300 feet above the earth. A full-sized apparatus was placed on the summit a few weeks since, and the shadow projected by its most intense flashes, at the distance of eleven miles, was judged to be equal to that from the moon in its first quarter. The light is thrown from the focus of a large parbolic reflector in one pencil of rays, which is made to travel round the horizon once in seven seconds. This light is made to repeat any required number of occulations in the following manner:—To give the number twenty-one, the reflector is turned twice with the light burning; then the light is put out, excepting a small point of hydrogen, and the reflector turned three times; the light is then increased again by the same machinery, and turned once; lastly, the light is suppressed during five revolutions. Any other number can be made by simply changing a cam-wheel.—The cost of producing a light of this intensity is represented by Mr. Grant as being half the sum required for a first-class Fresnel light.—The lime-point employed in this modification of the oxhydrogen light, is said to burn or rather glow with intense brilliancy for twenty-four hours without disintegrating.—*The Plow, Loom and Anvil.*

A Great Gun.—Some experiments in gunnery have been made recently at the Washington Navy Yard. The object was to test the metal (cast-iron) of which a heavy piece of ordnance is constructed, with a view to its adaptation to the navy. The gun is the largest in the country, with a bore of 11 inches, and weighing 16,000 lbs. Upwards of one thousand and forty rounds have been fired thus far — generally thirty a day. Fifteen pounds of powder serves for single charge, and the shot average each one hundred and sixty-eight pounds. Twelve men are required to work this mammoth piece of artillery. The effects of each discharge on the metal are carefully noted.—*Scientific American.*

How Guns are Spiked.—A correspondent of the London Herald describes how the Russians spike the guns:—"The spikes are about four inches long, and of the dimensions of a tobacco-pipe; the head flat; a barb at the points acts as a spring, which is naturally pressed to the shaft upon being forced into the touch-hole. Upon reaching the chamber of the gun it resumes its position, and it is impossible to withdraw it. It can only be got out by drilling—no easy task, as they are made of the hardest steel, and being also loose in the touch-hole, there is much difficulty in making a drill bite as effectually as it should do. Its application is the work of a moment —a single tap on the flat head with the palm of the hand sufficing."

LOOMS FOR WEAVING BAGS.

A very excellent improvement has been made in looms for weaving seamless bags, by George Copeland, of Lewiston, Me., who has taken measures to secure the same by patent. This invention does not change the general character of the loom, from those commonly employed for weaving plain or twilled fabrics, but consists chiefly in certain modes of constructing, arranging, and operating some of the parts which require to be duplicated. A loom constructed according to this invention requires two sets of harness, either for plain or twilled weaving, according as a plain or twilled bag is required, and all the mechanism necessary to operate the two sets of harness independently of each other. It also contains two shuttle races placed one above the other in front of the same reed, and employs two shuttles, which are both in operation at all times. In weaving a bag, though only one warp is used, two independent sheds are opened one above the other, and the two shuttles follow one another through the upper and lower sheds, and thus produce a fabric composed of two parts united at the edges, one-half of the warp from which the upper sheds are formed, composing one-half, or one side of the bag, and the other half from which the lower sheds are formed, composing the other half of the bag, the two parts of the fabric thus formed only requiring to be united at certain intervals, corresponding with the required depth of the bags, to form a continuous web of bags, which, when finished, only requires to be cut across at proper intervals to separate them. The bottoms of the bags are formed without any stoppage of the weaving, by the harness, and all the changes are effected by mechanism which works with the loom, the whole being self-acting.—*Scientific Amer.*

DRAIN TILES.

The subject of drainage, although well understood, and its advantages appreciated by our agriculturists, has been applied but to a very limited extent in our country, owing to the great expense of forming the drain properly. Every improvement, therefore, which tends to lessen such an expense, whether it be in digging the drains or in the material to form them, is of immense advantage to our farming community. An improvement relating to the latter object stated, namely the tiles or material to form drains, has been made by Selah Hilts, of Jersey City, who has taken measures to secure a patent. It consists in providing a suitable cylinder, in the mouth of which a piston furnished with a conical guide plug traverses, and forces the concrete mass of tempered clay (which is thrown into the cylinder) into suitable molds, ready to be dried and burned. Each mold has a core, an adjustable head rest, and adjusting screw, and a rotating knife cuts off the clay between the piston and the molds, into the proper length for each tile. The piston presser receives a reciprocating motion, and the machine can be worked either by hand, horse, or steam power. The rapidity of manufacture, and an improvement in the quality of the tiles, are the objects believed to be obtained by this improvement. —*Scientific American.*

Cylinder for the Mammoth Steamer.—A late London paper mentions that the last of the four largest cylinders in the world, had been successfully cast at Millwall. It was 18 feet long and 6 feet in diameter; 33 tons of metal was poured into the mould, which when bored out and finished, will weigh about 18 tons, or 62,720 pounds. The cylinders are intended for an iron steamer of proportionally monstrous dimensions. Her length will be 675 feet, her beam 83 feet, and her height 60 feet. She will be built entirely of iron, and divided into compartments of 60 feet, each perfectly water tight. About ten thousand tons of iron will be used in her construction.

Lumbering on an Extensive Scale.—The Portland Advertiser gives an account of a mammoth lumbering establishment recently completed by C. S. Clark & Co., of that city, on the St. Francis River, six miles beyond Sherbrook, C. E. These mills, it is said, will saw in a season, (working day and night) 20,000,000 feet of long lumber, and two trains a day will be required to get this lumber to Portland, whence it will be shipped to all parts of the world. To accommodate this business the proprietors have leased a large wharf in Portland, capable of allowing ten vessels to load at one time.

Grain Mills. — A patent has been taken out in England by J. H. Johnson, and in this country, for improvements in grain mills relating chiefly to the mode of driving the mill-stones. A number of pairs of stones are arranged in a ring, and are all driven by one large horizontal pulley, acting frictionally, and set in the central space between the mill-stones. This large pulley actuates small pulleys upon intermediate shafts, carrying pinions in gear with spur-wheels on the spindles of the several mill-stones.

Brick Machines. — An improvement in brick presses has been made by Henry Young, and assigned to Reuben Culp, of Degraff, O. It consists in so combining a moulding and pressing apparatus with the pug-mill, that the clay is forced by the arms of the latter out of an aperture in its bottom into a suitable charger, where it is pressed by a follower into the brick-moulds. A suitable mould carriage is also provided to move in and out laterally beneath the charger, in correspondence to the movement of the follower.

Mr. Hobbs has been awarded the Telford Medal by the Institution of Civil Engineers in London, for the paper on locks, which he read during a recent session of the Institution.

News Paragraphs.

☞ The floating batteries in course of construction in England will be the most formidable ever projected. They are of forged or hammered iron plates, four and a half inches think, lined inside with wood, and will measure 1,500 tons. From actual experiment it has been proved that they will be impervious to any shot or shell. The construction of these engines of war is a very difficult and expensive task.

☞ According to the census of the Canadas, 35 persons are reported to be upwards of 100 years old, and about 400 are found between the ages of 90 and 100. The Indians, those ancient or aboriginal lords of the soil, still number 5,208 in Upper, and 2,520 in Lower Canada.—Colored persons amount to nearly 5,500, more than five-sixths of whom are in Canada West.

☞ The English papers state that the number of revolvers manufactured by Mr. Colt during the last two years amounts to 200,000. As the profit on each of these pistols is said to be not less than $5, at wholesale price, it follows that his profits must amount to the snug little sum of $1,000,000 for that period.

☞ Through Chauncey Jerome, now Mayor of New Haven, the British Government have reduced the duty upon American clocks from 20 to 10 per cent, and all clocks shipped to England for re-shipment to the British Colonies, dependencies or possessions in British bottoms, are subject to a nominal storage duty in the government warehouses.

☞ England formerly purchased her cheap clocks of German manufacturers, mostly made in Scharwzwaltz, but since the introduction of the American clock, their beauty and cheapness has nearly annihilated the trade with Germany. About one-fourth of the clocks made in the United States find a market in England for home consumption and shipping.

☞ The whole of South Florida now occupied by Indians is to be penetrated and surveyed under the authority of government, and emigrants invited to settle the same. The war department is to make surveys, roads, &c., and protect them by stationing troops in close proximity. The savages are to be removed.

☞ Of the seventeen great London breweries, the house of Truman, Hanbury, Buxton & Co. stood last year at the top of the list, having consumed 140,000 quarters of malt, and paid to the excise £160,000, or enough to build two ninety gun ships, at the usual cost of a thousand pounds a gun.

☞ Mr. James Anderson, of Edinburgh, proposes a system of railways along the coasts presenting no natural means of defence, and placing upon these railways trains of carriages, each bearing a gun, so arranged as to be very readily available. Such a railway train would be a flying train of artillery.

☞ The Chief of the Choctaw nation has issued a counterblast to the American Board of Missions, in the form of a message to his people, denouncing the action of the Board upon the subject of their missionaries teaching slaves. He recommends that all the missionaries from the North be excluded from the territory.

☞ In Paris there are annually consumed 1,600,000 kid and lamb skins, for fabrication into gloves in Brussels 805,000; in Grenoble 800,000; in Amonay 3,200,000; making a total within these four cities of 6,400,000. To work this into gloves requires 12,800,000 eggs, at an annual expense of 630,000f.

☞ A company of capitalists have purchased 30,000 acres of land in Atlantic county, N. J., to be divided into shares of 20 acre farms.—The land is situated upon the Camden and Atlantic railroad. It is said that the project has been received with much favor, but that a moiety of shares remained unsold.

☞ The total cost of the National Capitol and adjacent grounds, up to the time of the commencement of the great extension, was $2,630,459. The additions now making will add five millions more to this sum, and the accommodations then will probably require no further increase for many years to come.

☞ The Journal de Petersburg says there passed, on September 2d, through Nijnii-Novgorod, (celebrated for its great annual fairs,) a transport of gold from the mines of Altai, on its way to the Capital. The transport contained 17,000 pounds of pure gold—worth $5,000,000, if we estimate a pound of gold at $300.

☞ The Kremlin is a fortress in Moscow, in the very centre of the city. It is two miles in circumference, and surrounded by brick walls and a deep moat. On entering, churches, palaces, public buildings, and the arsenal, just as it remained after the conflagration, present a most extraordinary appearance.

☞ Although emery has been sought for in all parts of the world, it has been only found in two places—in the island of Naxos, in Greece, and a few spots in Turkey. The annual production is at present limited to two thousand tons of Naxos stone and sixteen hundred tons of Turkish.

☞ Dr. Griscom, of New York, in his annual address before the Academy of Medicine, said of the sanitary police of that city, which is composed of twenty-nine men, that no more than one of them could designate incipient small pox from the effects of a mosquito bite.

☞ One day last week, says the Bangor Journal, there was cut out by one gang of saws in Gen. Veazie's new mills at Oldtown, 106 M of boards. We think this is really the greatest day's works ever done on the Penobscot, or anywhere else, by one gang.

☞ Mr. Kincaid, who was in the party massacred by the Indians near Fort Laramie, and who was left as dead on the field, having been pierced with three arrows, escaped to the Fort, a distance of five miles, and his recovery is hoped for.

☞ Upwards of forty million gallons of whiskey, six and a half million gallons of rum, and upwards of one and three-quarter million barrels of ale, are annually manufactured in this country, requiring the use of fourteen million dollars' worth of grain, hops and apples.

☞ On the authority of the Newark Advertiser, it is stated that by the death of the venerable Mrs. Susan Bradford, of Burlington, N. J., a valuable property comes into the possession of the General Assembly of the Presbyterian Church.

☞ The Boston Courier picks out as a text for the Rev. Samuel K. Lothrop, of Boston, who is to preach the election sermon to the next Legislature, Job, chap. 8, verse ix: "For we are but of yesterday, and know nothing."

☞ The New York Railroad Journal says that various new roads, the aggregate cost of which has been something like $60,000,000, will be rendered available next year.

Educational.

FREE HIGH SCHOOLS.

The true idea connected with providing the means for educating the rising generation, is that *all* are entitled to the privileges, as an inherent right; that property ought to be taxed to afford these means, and that no discrimination should be made as to whether or not the person owning the property has kith or kin dependent upon him directly or indirectly for support. The best and truest safeguard against ignorance, improvidence, pauperism and crime, is a good intellectual and moral education; and hence the owner of property is all the more secure in its possession, and all the less liable to be taxed for the support of criminals and paupers, just in proportion to a general diffusion of knowledge.

New England has long acted upon this principle, and most of the cities of our own State support their schools upon similar grounds. The *Common Schools* we mean, for not many of them, we regret to say, have gone so far as to erect higher seminaries of learning, where the more advanced studies can be pursued without cost to the parents or guardians of the students. It is true that most of those attending such institutions have the pecuniary means of doing so, but it is equally true that many others would attend if free to all who have not the means of paying the expenses as at present existing. New York city, and perhaps some others in the State, have a system of free High Schools in successful operation, and most other cities and large municipal communities, ours included, have *talked* the matter over, but have made no movement further.

The surest and most effectual way of making democratic progress, and breaking down the strong barriers of exclusiveness is to throw open the highest paths of intellect to the tread of humble feet. Theories of equality are indulged in vain, the doctrines of common right and common privileges are a dead letter, and the elevation of the masses to the standard of dignified and honorable humanity are idle dreams, so long as the lights of science and literature are shut out from the majority of men. The natural eye cannot see without light, nor the natural ear hear without sound; and the intellectual being is weak and undeveloped also, in proportion to the absence of the pabulum on which it feeds. Men rise from low estates because the means to do so are placed within their reach, and men in high places go down because they neglect these means. Women have been deemed intellectually inferior to men, and that doctrine has proved triumphant whenever and wherever females have been denied the privileges of intellectual cultivation commensurate with those of men.

Municipal reform is greatly needed in most of our cities, and economy in expenditure ought to be especially enforced; but that is poor economy which starves the intellect, and makes mental paupers of immortal men. Great praise is due to those cities which have created a system of free Common Schools, but the work stopping at that point, is only half performed, and will not be completed until the highest seats of learning are thrown open without cost to whomsoever chooses to occupy them. The step now most needed to accomplish this desirable end, is the establishment of free High Schools in all our cities.

THE LOG SCHOOL HOUSE.

Between the Ausable Forks and Franklin Falls, as I said to you, is a high region of country, cold and uninviting for agricultural purposes, desolate by nature as a place of residence, but covered with a large growth of timber. This timber is a mine of wealth to the manufacturers of iron, furnishing them with charcoal for their furnaces and forges. Occasionally you find a city almost of coal pits.—Hundreds upon hundreds of them clustered around. Some smoking in the slow progress of combustion, some just covered, and some just being piled ready for covering, and some already burned, from which sooty, and *charred* men, I had almost said, are raking away the coals, and loading them for the forges. As a matter of fact, it requires people to chop the wood, build and burn the pits, and carry away the coals; and they are to be found in plenty, in log houses along the road. As a corrollary from these facts, it follows that children will be born to them. And you will see the sturdy, knotty, and hardy looking little wilderness-born chaps, swarming in what you and I might consider inverse ratio, so far as numbers are concerned, to any apparent necessity for their presence, or provision for their support. Now in this country, as a general thing, wherever you find a dozen children, you will find a school mistress and a school-house. These three institutions seem to be inseparable, growing along up together, and it is a glorious thing that it should be so. It develops the native energy of the American character, and brings forth its inward might.

Well, some three or four miles south of Franklin Falls, in the "coal formation," as geologists would say, stood a log house. There were some fifteen or twenty healthy-looking boys and girls playing, and scampering, and shouting around the door, and I wondered at the evidences of a prolific reproductiveness, which seemed to characterize whoever inhabited it. While we were some distance from it, however, I heard a loud rapping on the window sash, and the little ones disappeared with a rush into the house. That sound was too full of old memories, recollections of long ago, not to explain the problem that had puzzled me. That log house, standing there all alone in that little clearing was a school house, a "seminary," a small branch of a great system, that has thrown and is throwing this country forward, with a rush of progress such as finds no parallel in the world's history. As we passed it, the door stood open, and I took an observation of the inmates. There was the plain but neatly dressed mistress, with her clean calico dress and black apron, her white neckerchief over her shoulders, and crossed gracefully over her bosom; her hair combed modestly and smoothly from her forehead, and fastened in a knot on the back of her head, standing with book in hand, and a class of little girls before her, about hearing them read. One chubby little fellow, of, say eight or nine years of age, was standing by himself in the middle of the floor, with a paper cap on his head, his pantaloons rolled half way to his knees, his right hand in his mouth, and his face down in a ludicrous-sheepish, and shame-faced fashion. There was no mistaking *his* position. He was undergoing punishment for some sin against the laws of the school, demonstrating the great truth that reaches from the cradle to the grave, that "the way of the transgressor is hard."—There was something so old-fashioned, so familiar to me in all this, that I was tempted to laugh and cry at the same time, as the present and the past stood out so palpably before me.

Do not think me capable of ridiculing these primitive people, or primitive schools. They are too important, too essential to the prosperity and progress of this country, in my estimation for that. I remember with feelings of profound veneration, the log school-house of my own boyhood days. It was the foundation of the small progress I have made in life. The teachings begun in these log school-houses, have given direction to, and roused the latent energies of many a great and good man of our country, whose names have passed into the history of these States, who will live in the world's memory, when thousands of graduates of the Colleges and Universities will have perished. Blessings on that log school-house in the Saranac woods, on its school mistress, and the little children whose "young ideas" she was "teaching how to shoot."—*State Reg.*

SKETCH FROM LIFE.

(Mrs. Let-the-Children-do-as-they-please, and Mrs. Findfault—Mrs. Findfault's hopeful present.)

Mrs. L.—Good afternoon, dear Mrs. Findfault; walk right in and take off your bonnet! we will have such a nice chat together. By the way, how do you like our school teacher?

Mrs. F.—There, just what I was going to say, I can't think of anything else. Why, she punished neighbor Q——'s little boy yesterday; 'twas shocking!

Mrs. L.—You don't say so! why what could the little fellow have done?

Mrs. F.—Way, he only laughed and played and would not study.

Mrs. L.—Impossible! just as if we sent our children to school to study, or to be governed, we send 'em to get 'em out of our way to be sure!

Mrs. F.—Of course, and—I am so out of breath I can't hardly speak (?)—Mrs. Q—— just sent her word she should not have her child punished, and she called it impertinence, the minx!

Mrs. L.—La! what is the world coming to? As if we are not to say whether our children shall be punished or not.

Mrs. F.—And she won't let them whisper, nor laugh, nor look out of the window, and if they miss only three or four words in spelling, she makes 'em get it over. For my part, I won't bear it, and I told her so. Just as tho' she has come here to do as she has a mind to, with our children! The other day my little Peter, here—you know he is only thirteen—laughed in school, and she made him stay in at recess; and I have charged him, if she does it again, to take his books and come home.

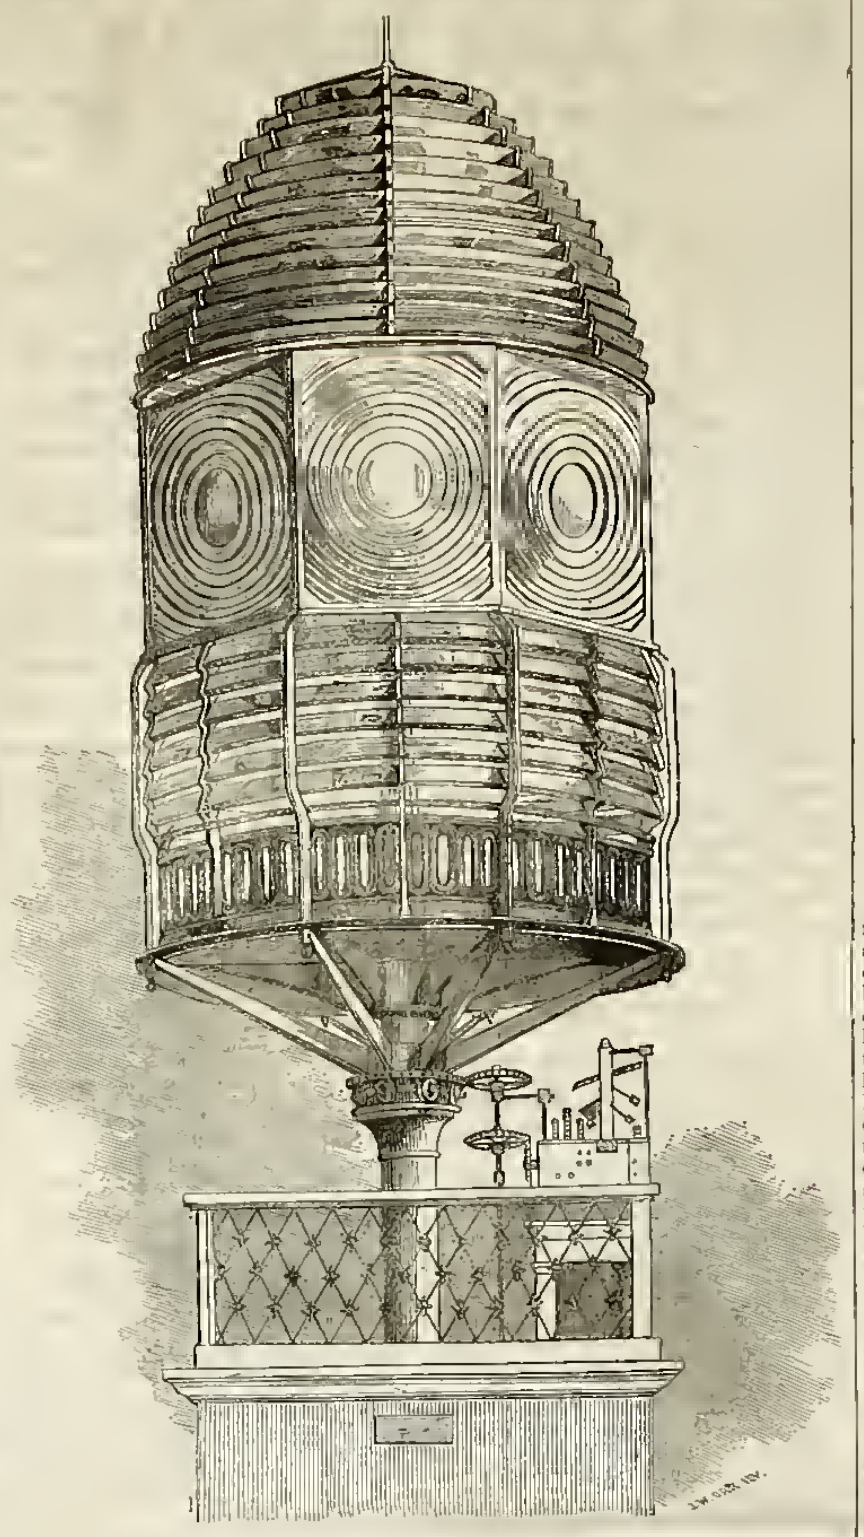
Mrs. L.—That is right; I am glad you show a proper spirit. We will learn her a lesson if she stays here.

Aye! you will teach her a lesson—and a lesson that young heart never learned before. Stay not your venomous tongues. Slander her! Is she a stranger? so much the better; she has no friends near to defend her. Never mind if those bitter words wound a too sensitive heart—she is a woman; and you would not dare speak so of a man. Teach your children to speak disrespectfully to, and of her. Teach them to break her rules; and in after years, when you shall shed tears of agony over the downward course of a loved child, and, perchance, see him chained in a convict's cell, you will remember with bitter regret, when you taught his young heart that first lesson, to disregard laws.

Repay all her efforts with ingratitude; plant thorns in her pathway; make her realize but too well, she is a "stranger in a strange land." He, who alone reads the heart, knows of the yearning, the intense longing for home, the sad, weary hours, the tears crushed back, the suffering, the misery. The plain, black dress speaks of death. Some near one, dearly loved, is sleeping beneath the soil; she came to you with a heart laden with sorrow. What care you? Strive by every word and act, to shroud it in a deeper darkness.

And God be merciful unto you in your time of woe—for "with what measure ye mete it shall be measured to you again, good measure pressed down and overflowing." Retribution! 'tis a law of God. Every bitter word of slander, every tear you have caused to start, shall return to you many fold.—*Olive Branch.*

Give children a sound moral and literary education—useful learning for sails, and integrity for ballast—set them afloat upon the sea of life, and their voyage will be prosperous in the best sense of the word.



THE FRESNEL LIGHT.

THE LIGHT-HOUSE.

Nothing evinces the ameliorating and humanizing influence of civilization on man's evil propensities more than the care bestowed upon all matters tending to reduce and mitigate the perils of the sea. In the infancy of commerce, the wrecks of foreign vessels upon any coast were considered a God-send by the inhabitants, and even the government itself not unfrequently came in for a portion or the whole of the spoils. The hardy mariner, and the adventurous trader, had to encounter not only the hostility of the winds and waves, but they were considered lawful subjects of extortion and plunder on every shore; and the greater the peril—the more they stood in need of a helping hand—the more were their goods regarded as lawful prizes.

Peace between two nations did not exempt shipwrecked goods from confiscation, and even stratagems were sometimes resorted to by the people of a dangerous coast, to lure ill-fated ships upon the rocks. Thus on the coast of England, at one time, undulating lights were displayed from the cliffs in imitation of those of a ship at sea, in order to deceive vessels in the vicinity, and entice them upon the coast.—Foreign and domestic, friend and foe, met with no mercy at the hand of these worse than pirate wreckers, who would leave the crews and passengers to perish while they seized upon whatever of the stranded cargoes might float within their grasp. These savage codes have been gradually softened down under the influences of an enlightened international law, until the shipwrecked mariner has come to be regarded as the special ward of the government, and his goods are looked after and protected from plunder with the utmost vigilance and care.—No act receives a more spontaneous and hearty approval from the whole civilized world, than that of a brave and generous ship's crew, who delay their own voyage and imperil their own safety for the sake of affording succor to the helpless tenants of a wreck at sea.

Along the coasts of all civilized countries, various devices are resorted to for the purpose of warning vessels of sunken rocks, and directing their courses in the safest channels.—Among the most efficient and common of these, is the light-house, usually erected upon points of land stretching outward from the shore, and perched upon a high rock so as to throw its rays as far as possible out over the waters.—The curvature of the earth's surface renders it necessary to elevate them to a considerable height, in order that the tangential rays shall touch the sea as far off as they can penetrate the gloom of night and storm.

To any one sailing along our coast, as for instance through Long Island Sound, these beacons are visible along each shore, casting their light, sacred as the fires upon the altar of mercy, far over the waves. Various expedients, such as the revolving light, the alternating colored light, &c., are resorted to in order to signalize to the mariner what particular light he sees. One of the greatest obstacles to the perfect efficiency of the light-house is the fog, which often obscures its rays and makes them powerless to penetrate the gloom, thus rendering them comparatively useless at the very time when their friendly light is of the greatest value.

M. Fresnel, a French philosopher, in the year 1819 invented a lanthorn composed of glass plates and prisms, which collect all the rays of light and perfectly reflect them in a narrow belt of intense brightness, that can be seen at a great distance out at sea. One of these costly lights was last season on exhibition at the Crystal Palace, in New York, and is thus described in the *Peoples' Journal:*

Its exterior, composed of clear and polished crystal, supported on a small base, and rising to a height of about twenty feet, presents the singular appearance of a tall monument, revolving continually upon its base, and flashing out at intervals, rays of the brightest and purest light. It is denominated a revolving Fresnel light, of the first order, and was manufactured by Lepante, of Paris, for the United States Government. It is designed to be placed on a light-house at Cape Hatteras, which is now erecting.

The principal part consists of a cylindrical belt of glass, which surrounds the flame in the centre, and by its action refracts the light in a *vertical* direction upwards and downwards, so as to be parallel with the focal plane of the system. To near observers, this action presents a narrow vertical band of light depending for its breadth on the extent of the horizontal angle embraced by the eye. This arrangement, therefore, fulfills all the conditions of a fixed light, and surpasses in effect any arrangement of parbolic reflectors. In order to save the light which would be lost by passing above and below the cylindrical belt, *catadioptric* zones are employed. These zones are triangular, and act by *total* reflection; the inner face *refracting*, the second *totally reflecting*, and the third or outer face, a second time *refracting*, so as to cause the light to emerge *horizontally*.

Vice stings us even in our pleasures, but virtue consoles us even in our pains.—*Cowper.*

Sunday Reading.

"WHERE IS YOUR HOME?"

Where is my home?—not here,
Where angry winds are sighing;
Not where the flowers of Spring
Are sadly drooping—dying;
Not where the dim old woods
Are shrieking—wildly wailing—
Nor where the spectre Death,
Each rosy cheek is pallog.

Not where the dark storm clouds
In azure skies are looming—
Not where the thunder's tones
Are loudly, hoarsely booming;
Not where the lightning,
Within the sky is streaking—
Nor where the tempest hoarse,
Far, far around, is shrieking.

But there in a "better land,"
Where many a friend is dwelling—
Where the low, gentle notes
Of soft-toned harps are swelling;
Where flowers bloom ever bright,
And gales are softly blowing;
Where pure perennial streams,
Thro' all the lands are flowing.

Yes!—there—where all is pure,
Where sorrow cometh never,
Where kind and loving friends,
Death hath no power to sever;
And He, to whom we pray,
At morn, at noon, and even,
Forever dwelleth there—
Sweet friend, "My Home's in Heaven."

[*Olive Branch.*

THAT LITTLE OLD MAN.

There he goes—tripping along through the rain, as if he were trying to dodge the drops, as spry as a cricket. A little, short, crabbed old man, dressed in an old-fashion suit, with a broad-brimmed hat covered with shining glazed or India-rubber cloth: that is Grant Thorburn! He is over eighty. And yet it troubles the young woman by his side—healthy, stout, blooming—it troubles her to keep up with him. Now they start to cross the street,—the sea of mud—crowded with horses, carts and carriages. The lady is timid—the old man rushes ahead—then he turns back, bends forward, and stretches out his long arms coaxingly towards his young wife—for the lady is his new bride—and of course, she seizes hold of them and comes on. Now they are safe on the other side, hurrying along the sidewalk cozily together—the old man cheerful and bright, the young wife robust and fresh as a rose-bud—they trip along lovingly together. Hastily they turn to the right and enter a store of Sunday-school books, or something of that kind.

Yes, that is old Grant Thorburn—once the acquaintance and friend of Thomas Paine, the celebrated infidel, but always the very antipodes of Paine on the subject of religion.

He landed in this country, we believe, with only three cents in his pocket. He has been noted and successful as a seedsman; has written his own autobiography; has published much under the signature of Laurie Todd; has lately held a birth in the Custom House, from which he was discharged for carrying a lamp in a forbidden place; and, withal, has recently taken to himself a third, or a fourth wife.

How few of us will live to see the years which he has seen! All, perhaps, expect to do so. But, one by one, we shall be summoned to the Silent Land, long ere we reach Grant Thorburn's age. Some will step out by one door and some by another, some willingly, some reluctantly, some with ample warning and after long illness, others suddenly and unprepared: but how few at his age, of all who live to-day, will be threading the streets of New York, as old Grant Thorburn glides about them now—and with a young bride!—*N. Y. Evening Post.*

CONSOLATION TO THE BEREAVED.

Dr. Judson thus wrote to a friend in the hour of trial:

"So the light of your dwelling has gone out, my poor brother, and it is all darkness there, only as you draw down by faith some faint gleams of the light of heaven, and coldness has gathered round your hearth-stone; your home is probably desolate, your children scattered, and you a homeless wanderer over the face of the land. We have both tasted of those bitter cups, once and again; we have found them bitter, and we have found them sweet too. Every cup stirred by the finger of God becomes sweet to the humble believer. Do you remember how our late wives and others used to cluster round the well-curb in the mission premises, at the close of day? I can almost see them sitting there, with their smiling faces as I look out of the window at which I am now writing. Where are ours now? Clustering around the well-curb of the fountain of living water, to which the Lamb of heaven shows them the way; reposing in the arms of infinite Love, who wipes away all their tears with his own hand. Let us travel on and look up. We shall soon be there. As sure as I write and as you read these lines, we shall soon be there. Many a weary step we may yet have to take, but we shall get there at last. And the longer and more tedious the way, the sweeter will be our repose."

The Secretary of the British Unitarian Association reports:—"Not only are there upwards of thirty of our congregations of some standing now in want of ministers, but the number of such vacancies is rapidly becoming greater, from the removal of some of our brethren by death, and the secession from the pastoral office of others, who seek in other professions and pursuits for employment more congenial with their tastes, or for the means of a decent livelihood, which their ministerial sphere seemed unable to yield them."

He censures God who quarrels with the imperfections of man.

Ladies' Department.

CONDUCTED BY A——E.

[Written for Moore's Rural New-Yorker.]

TO MY HUSBAND,

ON THE TWENTY-FIFTH ANNIVERSARY OF OUR MARRIAGE.

BY MRS. E. W. H.

At early morn when skies were bright,
Upon the sparkling wave
We launched our bark. Affection's light
Illumed our track; we feared no night,
Prepared the storms to brave.

Since then o'er faithful at they side
I've stood, a trusting wife—
Five times five years, with rapid stride,
Have borne us on Time's surging tide,
And taught us what is *Life*.

Our darling first-born, angel child,
Lisped "father" at my knee,
And when that name in accents mild,
She dying spake, and sweetly smiled,
I closer clung to thee.

Now others claim of love a share,
Our hearts can hold them all—
O God of Love! hear Thou my prayer:
Their youthful feet, from every snare
Deliver, lest they fall.

Though skies have oft-times been o'ercast,
And Fortune's smiles withdrawn
We'll ne'er "look mournful on the past,"
Or bend beneath a wintry blast,
But press with courage on.

Though care-worn is my matron face,
And silver-flecked my hair,
My heart still young, feels not a trace
Of frost-work that will e'er erase
Thine image treasured there.

The noon of life with us is o'er,
Yet we will labor still,
While side by side we near that shore
Where disappointments never more
Can faithful bosoms thrill.

DARLING LOTTY:

OR, THE PERILS OF HOUSEKEEPING.

Miss Charlotte Jones was the daughter of a worthy and enterprising carpenter, who, settling in a thriving village, became, in due time, a builder, a contractor, and a fore-handed man. His wife was as industrious as himself, and more ambitious; and among their other blessings, they had one fair daughter, Miss Charlotte, who was as pretty, as charming, indeed, as was necessary to make the smartest and cleverest young man in the place fall in love with her—which he did.

Certainly he did. He was a medical student, in the doctor's office right opposite. As he sat there studying anatomy or making pills, he could see Miss Charlotte in the parlor or the garden. He could hear her play on the piano-forte, and sing; he could see her doing all sorts of wonderful worsted and crotchet work; and he came to think that parlor one of the most delightful places in the world.

Well—it was a love affair, all mutual and pleasant; calls and moonshine, music, billets, blushes, boquets, long Sunday evenings, and finally, 'Ask Pa!'—and then a wedding—but of course the diploma came first, and the petted child of the successful carpenter, became Mrs. Doctor Simmons.

And Dr. Simmons, who had received the honors of a medical college, rather young; and who thought it needful to raise all the whiskers he could by industrious shaving, and a course of Macassar, and to mount a pair of spectacles beside, to make him look old enough, had decided to commence business in a small but growing village, in a neighboring county; where, as it happened, Mr. Jones owned a neat cottage, of which, with its acre garden lot, he made his daughter a marriage present; and there, on the termination of the wedding tour, they took up their residence. The good Mrs. Jones had put everything 'to rights.' It was in the most exquisite 'apple pie order;' and no young couple, just beginning housekeeping, was ever any better fixed.

Mrs. Jones, good soul, had always done her own work. Help was a dreadful bother.—Charlotte had been carefully educated. She could do everything; that is, everything that is ever taught to young ladies. She knew all sciences and nearly all languages; that is, a little. She could do all kinds of fancy work. Her worsted cats and wax flowers were wonderful; so were her water color drawings, and her mono-chromatic sketches were 'high art.' Everybody said so.

But, somehow, Mrs. Jones, from the habit of doing everything herself, had not given Miss Charlotte a fair chance in kitchen and laundry and in other housekeeping accomplishments; while Charlotte had a vague idea that all those common things were perfectly easy, and as they were not taught at school, she concluded that they came by nature. So she commenced her housekeeping in a dream of blissful anticipations.

They took possession of their fine little house one fine summer's evening. Mrs. Jones saw them all properly fixed, and had gone home.

They wakened with the early birds. Dr. Simmons dreamed that somebody was thundering on the door, to call him up to see a patient. It was his horse pawing to be fed.

"Well, Lotty dear," said the grave Doctor, who was in his twenty-third year, to his wife of seventeen; "shall we make a beginning now, rise early, and attend to business?"

"Oh, by all means. I'll jump up and get breakfast."

"And I'll feed Pomp, and weed the garden."

So the Doctor watered and fed his horse, and hoed his potatoes a little, and then took a peep into the neat little kitchen, to see how the "Darling Lotty" was getting on with breakfast. Her face was very red, and her hands very black; her hair was powdered with ashes. It was plain that she had trouble; but she spoke pleasantly, for all that, when she said—

"Do go away, Charles, that's a dear, till you hear the bell ring. Breakfast will soon be ready."

Well, he waited. He read, then he whistled, then he fidgeted, then he wound up the clock, then he looked at his new case of instruments, and wondered how soon he should cut off his first leg; then he got very hungry, and at last the bell did ring, and he went to breakfast.

The Darling Lotty was looking a little better, but still rather anxious.

"Have you had a hard time, darling?" inquired the Doctor, cautiously.

"Oh, not very. The fire did not kindle well at first, and the stove smoked."

"Did you open the damper?"

"Damper! why no. Has it got a damper? Well, I'll remember next time. Now have some coffee."

The Doctor took his cup, stirred it about, looked rather hard at it; and then at darling Lotty.

"Well, what is it! I'm sure I don't know what makes it full of those specks, I boiled, and boiled it."

"Yet it don't seem to be settled. Did you put in any fish skin?"

"No, I forgot."

"No matter. It will do very well. Now darling Lotty, I'll take an egg. Why! It's as hard as a brickbat."

"Hard! Now how can they be hard, when they were boiling all the time I was making the coffee and the toast!"

"Ah! toast; let us try that. A little burnt, but very good; there, don't cry, darling; it'll be all right next time."

After showers come sunshine, and this one cleared off. The Doctor laid aside his dignity and helped wash the dishes; and then put his horse in the sulky, took the new saddle-bags, and drove off furiously, to see some imaginary patients, till dinner time, while darling Lotty blocked out a worsted parroquet, that bid fair to be the wonder of her next winter's parties. But this, like all pleasures, came to an end, for there was dinner to get, and that dinner was to make up for the breakfast. The Doctor liked a nice dish of boiled victuals—so she made a fire, and peeled the potatoes, beets, carrots, turnips, parsnips, and put them, with a nice spare-rib of fresh pork into the kettle, and set them to boiling. There was a rousing fire; the water boiled furiously, and she went up stairs to put a few stitches into the parroquet. Pretty soon she became conscious of an unpleasant odor; she snuffed and wondered, and then put in the eye of the parroquet. But the unpleasant odor became stronger, and at last she thought proper to go in the direction it seemed to come from; and that happened to be the kitchen. The stove was red hot; so was the kettle of boiled victuals; and a nice smother was rising from it. The Darling Lotty dashed a dipper of water into the kettle—bang!—and such a cloud of steam! The kettle was cracked, but the Doctor had just come home hungry, the table was set and the dinner was soon dished.

The Darling Lotty took her place at the head of the table. She was flushed, and nervous, and ready for a fit of hysterics; but the Doctor was so cheerful, and tender, that she began to feel quite happy. But the poor dinner. It did not smell exactly right; it seemed to have caught on the bottom of the kettle, the Doctor said; then the potatoes were boiled into a pulp, while the beets and turnips were quite hard. The fresh pork rather wanted salting.

"Charles, dear!" said Lotty very sadly.

"Well, Lotty, darling, what is it?"

"I'm afraid the dinner is not very nice."

"Well, it is a little scorched: and not exactly managed all regular and all that sort of thing, you know; but what sigoifies? We'll try the dessert."

"Oh!"

"Well, darling, what's the trouble?"

Lotty ran into the kitchen, and there was her poor, forgotten plum-pudding in the stone oven just burnt to a cinder. It was black as coal—a fine carbonaceous specimen, as the Doctor learnedly remarked, as he finished, or rather made his dinner, on some bread and butter.

The darling Lotty mourned over her disasters, but took comfort in the brilliant plumage of her parroquet, which Dr. Simmons could not sufficiently admire. She was also comforted with the thought that the next meal was tea, which she felt sure she could accomplish. And when the hour drew nigh she made up a fire; and by this time she had learned how to manage that. Then she took some flour and milk and butter, with plenty of saleratus, to make them light, and mixed up some nice biscuits and put them in the oven, and then she made tea; and when all was ready, she rang the bell with great emphasis. And, truth to say, the table was very richly arranged, and the tea service of gold and china was beautiful.

Dr. Simmons smacked his lips with great gusto. He took a cake, and tried to break it, but it did not seem to break readily. Then he tried his knife. It cut like cheese; also, it was very yellow, and smelt and tasted rather strongly, the Doctor said, of free alkali. So it did, in fact, for there had been no acid to neutralize the saleratus, and set free its carbonic acid, and of course nothing to make the cakes rise. The Doctor explained it all very learnedly; and then, as he felt thirsty, took a sip of his tea, of which he was very fond.—But he made a wry face.

Lotty was in consternation. "Is not the tea right? It *must* be!. I put in a great deal and boiled it ever so long. I'm sure if it has'nt got the strength it soon will have."

"My darling Lotty, tea is a delicate and odoriferous plant; and should be prepared as an infusion, and not as a decoction. Bring me a little tea, darling, and some hot water, and I will soon make a good cup of tea;" and he did.

The poor darling Lotty. It took all the endearments of a tender husband in the honey moon, to keep her from downright despair. But the day's lesson had not been lost, and she had determined to have such a nice breakfast as should make up for all.

Morning came; and our young Doctor gallantly offered to assist in getting the morning repast; but no; Lotty was determined to do her own work. She mixed her cakes according to the learned suggestions of the evening previous. She boiled the eggs three minutes by the clock. The coffee was clear—greatest comfort of all. She rang the bell, and sat down in triumph.

The Doctor broke a biscuit—it was capital. The egg was just right. Then he tasted the coffee—and it came out of his mouth as soon as it was in. And such a face! Doctors are not squeamish; young doctors particularly.—They know what bad tastes and bad smells are; but this—

"Why, Charley!" cried the darling Lotty, "what is the matter with the coffee?"

"That is what I would like to know. Lotty, darling, I know you do your best, and the biscuits and eggs are beautiful; but what did you put in the coffee?"

"Why, Charley, you said it must have some fish skin to settle it; and the only fish in the house is some herrings, so I skinned two of them, and put the skin in the coffee!" and poor Lotty burst into a paroxysm of tears.

But there came sunshine soon, that made it all pleasant weather. Lotty had invited an old school friend to visit her. She came soon after breakfast, and, as it happened, her housekeeping education had not been neglected.—She absolutely knew everything. Mrs. Hale, Miss Leslie, even Mrs. Glass or Mrs. Rundell could not excel her. She was a walking cook book, and a lively little treatise on domestic economy.

Never was a visitor more welcome, and now the darling Lotty learnt every possible thing—to wash and mend, and bake, and cook everything; and became the nicest little housekeeper extant, while the Doctor, by the aid of his venerable appearance, and rapid driving in the sulky, rode into an extensive practice, and was never tired of boasting of the excellent cookery of his Darling Lotty.

Variety.--Grave and Gay.

Winter is Coming.—The following beautiful extract seems to be appropriate for the present weather:

Cometh the winter—
Alas! for the poor;
For they can but feebly
His cold reign endure.
Would that the Spring-time
For them was eternal;
And the green trees, for their sakes,
Forever were vernal!

Cometh the winter—
O, ye rich lend an ear:
Remember the poor,
In this cold time of year;—
For the wind as it whistles,
But echoes the cry
Of the poor and the wretched
Who languishing lie.

By a law of our beneficent Creator, ordained by the perfection of Divine wisdom, man is the most helpless and dependent of the animate creation. In infancy this peculiarity is exhibited in a remarkable degree. Other creatures soon arrive at perfection, and being fully developed in all their parts, are able to provide for their own wants and safety; while many years must elapse before the infant can safely be released from a state of pupilage and dependence.

John Bunyan, while in Bedford jail, was called upon by a Quaker desirous of making a convert of him. "Friend John, I have come to thee with a message from the Lord, and after having searched for thee in all the prisons in England, I am glad that I have found thee out at last." "If the Lord had sent you," returned Bunyan, "you need not have taken so much pains to find me out, for the Lord knows I have been here twelve years."

"I am glad," said the Rev. Dr. Y., to the Chief of the Little Ottowas, "that you do not drink whiskey, but it grieves me to find that your people *use* so much of it." "Ah! yes," replied the chief, and he fixed a penetrating and expressive eye upon the doctor, which communicated the reproof before he uttered it, "we Indians *use* a great deal of whiskey, but we do not *make* it."

The art of living easily as to money, is to pitch your scale of living one degree below your means. Comfort and enjoyment are more dependent upon easiness in the detail of expenditure than upon one degree's difference in the scale.

When we record our angry feelings, let it be on the snow, that the first beam of sunshine may obliterate them for ever.

A generous mind does not feel as belonging to itself alone, but to the whole human race.

The parent who would train up a child in the way he should go, must go the way he would train up his child in.

True prayer is not human, but a celestial gift; the fruit of the Holy Spirit praying in us and with us.

Men often blush to hear of what they were not ashamed to act.

If folly were a pain there would be groaning in every house.

True eloquence consists in saying all that is necessary, and nothing more.

If thou art master, be sometimes blind; if a servant, be sometimes deaf.

Small faults indulged, are little thieves that let in greater.

Reason governs the wise man, and cudgels the fool.

The foundation of political happiness, is confidence in the integrity of man.

Prosperity is no just scale: adversity is the only balance to weigh friends in.—*Plutarch.*

To owe an obligation to a worthy friend, is a happiness, and can be no disparagement.

Miscellaneous.

THE TWENTY-SECOND OF DECEMBER.

BY WM. C. BRYANT.

With sea the day; the wintry sea
Moaned sadly on New England's strand,
When first the thoughtful and the free,
Our fathers, trod the desert land.

They little thought how pure a light,
With years, should gather round that day:
How love should keep their memories bright,
How wide a realm their sons should sway.

Green are their bays; but greener still
Shall round their spreading fame be wreathed,
And regions, now untrod, shall thrill
With reverence when their names are breathed.

Till where the sun, with softer fires,
Looks on the vast Pacific's sleep,
The children of the pilgrim sires
This hallowed day like us shall keep.

[Written for the Rural New-Yorker.]

"OUT WEST."

Our West! Who has not some ludicrous visions of a pioneer's life and some wild dreamings of the broad prairie or beautiful woodland, where he seeks the rich produce of the virgin earth? Who has not seen, in imagination, the limitless plain, with its tall grass waving in the breeze or bending helplessly before the giant-stride of the Storm-King as he rushes on unchecked by friendly hills or sheltering forests? Who has not rested there beneath the welcome shade of the picturesque openings, or gazed in admiration at the fragrant tapestry of gay flowers wantonly stretched at his feet?

But alas, how dim are our visions, how pale are our fancies, when with the natural eye we perceive the pictured vastness of the boundless prairie, and the fabled romance of the tangled wild-wood dispelled by the thousand details of civilization and innovation, which meet our view. Among these are the pleasant dwellings, scattered here and there, — the clamorous machinery of the clanging saw-mill —the stout farmer turning the green turf from our sight, and above all, the agonizing shriek of the time-bound cars, as they vainly strive to out-speed the flying moments. How many of us remaining quietly in our retired homes, would be astonished to find the wilderness blossoming as the rose and the wild places blooming as a fruitful field! Out West, *outre* and outlandish as we have deemed it, is strong in the past, great at the present, and full of promise for the future. The active New-Englander, with true Yankee enterprise, has banished for many vast acres, every tree of the magnificent forest, whose lofty occupants were a teeming volume upon the fruitfulness of their mother Earth. The scheming New-Yorker—the plodding Jerseyman—the working Pennsylvanian, and the jolly Kentuckian have mingled in the advancing current bearing westward until they have proved the goodly land, a genial home and a mine of wealth which has counted to them again and again their once doubtful investment.

We see the population of our eastern shore gradually tending toward the heart of our great country, on, even to the fertile boundary of the mighty Pacific. Europe is also pouring its millions unchecked into the uncouth mixture which serves to form the body-politic of "Out West." The industrious German rears the vine tree, and flavors the "sparkling Catawba,"—the sober-minded English here till the soil, and grow pompons in their increasing prosperity,—the cordial French with their rural tastes and active habits, create a flourishing garden beneath the sunny skies—the frugal Swiss and honest Scotchman finds them a hill-side home, while the republican, un-Mitchellized Irish, lay the foundation for that Colossus of modern ingenuity—the Railroad. It is well known that these are not altogether above ground.

The "Queen City" stands proudly, as a beacon at the extremity of the great chain of lakes and has many rivals upon their prosperous shores. From the undergrowth of a mighty wood, villages spring, as if by magic, mirrored in the swift current of swollen river, or gentle stream; or, perchance, they wake to life under the civilizing tread of the Iron Horse as he madly tramps through unsettled wilds.—Church-spires are daily rising towards the heavens, and many proud domes predict the future scholar and sage. Innovation, change and progress do not startle the rising fears of the public mind, as in many an obscure eastern hamlet. They are but a varying necessity of every-day existence. Such a variety of elements with their numerous combinations cannot fail to have a leveling, democratic tendency. There are no changeless bulwarks of Popular Opinion, built upon the prestige of wealth and time-honored custom, to check the progress of truth or stifle the embryo of genius and greatness.

The professions have their meagre representatives, who will anon, give place to those who shall have expended more of the "midnight oil." Skilful artisans and ingenious mechanics will ere long find a home in the growing western cities, while the contented farmer, who lives a *true life*, will form the chief support and steady out-post of every organization, he alone constituting the genuine stamina to which the floating surface of society is attached. The Great Architect has left but little of Earth's material beyond the reach of man in the shape of barren rocks, fruitless hills and pestilent swamps. Thus, in Agriculture, lies western wealth, and in its pursuit the willing suit and genial climate lend their ready aid.—Wild, uncultivated, untaught nature, is more easily subdued the farther west we recede from the Atlantic shore, and how manifestly do we recognize an over-ruling Providence in the *earlier* settlement of hardy and barren New England!

What colony that had first landed upon the rich and fertile shores of the Pacific, or upon the banks of the Mississippi, would have emigrated to Maine or New Jersey? We can easily divine that all will be inhabited, and in a term of years, "Out West," as we now call it, will become the central and powerful region of a great and flourishing Republic. Who can say that in less than half a century, our noble Capitol will not look down upon the "Father of Waters?" Who can say that we shall find henceforth, the eternal snows and rushing avalanches of the Rocky Mountains, a barrier to prevent our sweeping onward, at the rate of nearly two-score miles an hour, from our present sea-board emporium, to the El Dorado of the Pacific? Such are the childhood and youth of our country, and what may we not hope for its maturity,—and with this thought we may regard "Out West" as the pride and hope of the most sanguine and enthusiastic patriot.

L. A. T.

North Fairfield, O., Nov., 1851.

OUR WORLD.

This is a sinful world—a very evil world! This is a delightful world! This world is strewed with thorns and brambles, to such extent, that no son of Adam can pass through it without mighty risk of damage to his nether and upper garments. At the same time this world is one bed of violets—a whole field of buttercups and daisies, whereupon bees hover and hum their content—whereupon dews sleep and awake to kiss dusty anthers! Other good things and things naughty are said, and have been said, of this world, down to a recent declaration of a well known *savant*, to the effect that our world is soft within and crusty without, and that the upheaving of a continent is only such an effect as the blowing up of a kettle-lid by enraged steam. If any one doubts our word, he has only to refer to a recent paper read before the Academie des Sciences of Paris. The fact is, that we look upon this world of ours through tears or laughter—through innocence or remorse—through tinted spectacles or Brazilian pebble eye-glasses.—There is no sunrise to a sinner; and the saint can witness a gorgeous sunset, predictive of everlasting repose, through the most opaque clouds of evening. Respecting this world of ours, praised and abused as it is and has been, one thing is very certain, that we learn its lessons in spite of ourselves. We revolt like school boys, and endeavor to lock out the teacher. By legitimate door or battened window the school-master enters, and tingling palms and aching knuckles bear witness that he has vindicated his authority. We have dragged through the syntax of life in spite of ourselves, and have knowledge of more declensions and conjugations at the age, say, of forty, than the Eaton Grammar takes notice of. All this we say in the presence of biographies, of men and women, of greater or less note, which have passed and continue to pass under our notice. We read alike the lives of saints and sinners; and from both we have the confession—*the world teaches.* And the world, we modestly presume to say, will continue to be a great teacher, reminding the rain and the idle and the lazy, with lusty administration of pedagogic birch and ferule, that tinsel will never pass for gold—that wishing to do will never supply the place of doing—and that the most angelic contemplation may be dead beaten by a poverty-stricken action; in confirmation of which we might quote St. Anthony and the lowly cobbler of Alexandria.
—*London Literary Journal.*

THE GOOD TIME COMING.

The love for others and for the race is as much a part of human nature as the love of self; it is a common instinct that man is responsible for man. The heart has its oracles not less than the reason, and this is one of them. No practicable system of social equality has been brought forward, or it should, and it would, have been adopted. It does not follow that none can be devised. There is no necessary opposition between labor and intelligence. To elevate the masses, they themselves must have culture to know their rights, courage to assert them, and self-respect to take nothing else. The good time is coming when the spirits of humanity will recognize all members of its family, as more equally entitled to its care; when the heartless jargon of over-production in the midst of want will end in a better science of distribution; when man will dwell with man as with his brother; when political institutions will rest on the basis of equality and freedom. But this result must come from the development of internal life by universal culture; it can not be created by the force of exterior philanthropy, and still less by the reckless violence of men.—*Bancroft's Oration.*

The last society spoken of in California is the "Pay Nothing." It is said to be alarmingly prosperous. The password is, "Lend me a dollar," the response, "Broke." We hear there is a branch about to be located in this city.

RURAL NEW-YORKER

ROCHESTER, DECEMBER 23, 1854.

SPECIAL NOTICES.—TO AGENTS, &C.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THOSE who are furnishing clubs, (20 to 50 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ THE RURAL is published strictly upon the CASH SYSTEM—send no longer than paid for—and all orders should be in accordance with terms.

☞ IN remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ IN writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County and State. Write all names plainly.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ THE lowest club price of papers delivered at publication office, is $1,50 per copy. If mailed, $2,50 will be charged per copy, when left at residence by city carrier.

☞ WESTERN MONEY is at present almost unsalable in this city, and we therefore request Western friends and agents to remit Eastern money—or drafts on Buffalo or New York, less the cost of exchange.

☞ SPECIMEN numbers of the RURAL cheerfully forwarded to all disposed to aid in augmenting its circulation. We will send to your own, or the address of friends, all the necessary documents—extra numbers, show bills, prospectuses, &c. It will afford us pleasure to respond to all requests in this line.

The Volume is Closing.

At this is the last full number of our present volume, (a large portion of the next being occupied with title-page, index, &c.,) we trust no apology is necessary for brief allusions to ourselves and enterprise. Hence, here and elsewhere, we address friends in behalf of the RURAL, and relative to its present and prospective prosperity.

We trust it is unnecessary to assure any of its readers that our heart is in the cause advocated by the RURAL—that we labor to promote the interests and welfare of community, as well as for individual benefit. From the commencement of this journal it has been our earnest desire and constant aim to enhance the best interests of its readers and community generally—reckoning the matter of personal remuneration a secondary and comparatively unimportant consideration. In pursuing this plan, we have frequently been deprived of, and in some instances spurned, pecuniary items of no small importance; and, though admonished that we should look first to our own interest, and do whatever was legitimate for the purpose of making money, we have never knowingly swerved from the course originally determined upon—to make the RURAL NEW YORKER an honest, reliable and eminently useful AGRICULTURAL AND FAMILY NEWSPAPER,—correct in its teachings, of high moral tone, and entirely free from all deception and quackery, even in its advertising department. Adhering to this platform, we have frequently solicited, as we now again do, the influence of our readers in support of a journal which we believe eminently adapted to the wants, and designed to promote the well being, of individuals and community. Though we have offered liberal inducements for efforts in its behalf, we have placed the paper upon its merits when asking the influence of friends in its support—and never sought subscribers upon any other basis.

Our new volume commences in two weeks, with improvements already announced. Next week, in accordance with our invariable rule, the names of all whose subscriptions expire with the volume (about twenty thousand) will be stricken from our books. Considering the stagnation in business of late, and the hard times in cities and among business men through the land, we have naturally felt no little solicitude in regard to the success of the RURAL for 1855,—yet recent and present indications are most encouraging, and we confidently anticipate a large increase of subscribers. Determined to *merit* such a result, we frankly ask in its support the kind offices of all who like the RURAL, and believe its enhanced circulation will redound to the benefit of community. Will not all such not only renew their own subscriptions, but do us the favor to introduce the RURAL to the notice and support of their neighbors and other acquaintances? Reader—friend, though personally a stranger—you can materially aid in augmenting the circulation and usefulness of the RURAL, *by exhibiting this number*, expressing your opinion of the character and merits of the paper, and receiving and forwarding subscriptions. And if consistent with your views and engagements, we trust you will have the kindness to act upon the suggestion.

The Weather.

LAST week was a mild one, and the immense amount of snow which had previously fallen very essentially diminished in quantity. The sleighing was spoiled, and wheel vehicles began to make their appearance in our streets. Very general regret was expressed at the prospect of a complete thaw, but the wind began to veer towards a colder point of the compass on Saturday night, and by Monday morning the weather was quite severe, and several inches of new snow had fallen. The prospect now is that on the matter of sleighing we have "got an extension."

Congressional.

SENATE.—During the week notices were given of intention to introduce bills to abolish the franking privilege, and for establishing a marine hospital at Galena, Ill. The bills introduced were to postpone for three years the payment of duties on railroad iron; and for the improvement of Illinois river. Bills were reported back from Committees, to establish a Board of Accounts; for deepening the Channel over St. Clair flats, and the flats of St. Mary; for increasing the commissions of Registers and Receivers of public lands. The bill of last session for the support of ocean mail steamers was taken up, discussed and laid on the table. Mr. Miller offered a resolution calling for all correspondence relative to the French Consul at San Francisco; adopted. Mr. Sumner offered a resolution directing that inquiry be made as to the expediency of abolishing the tax on merchant seamen, known as hospital money, and of allowing them the use of hospitals free of all tax; adopted. The Rev. Mr. Slicer was re-elected Chaplain, and the Senate adjourned from Thursday evening to Monday.

HOUSE—Dec. 11th.—Mr. Houston, from the Committee of Ways and Means, reported bills making appropriations for Military Academy, and for the support of the army; referred. On motion of Mr. McDougal, further consideration of the Pacific Railroad bill was postponed till the 2d Tuesday in January, in order to get reports of Engineers and Surveyors of routes. Mr. Babcock introduced a bill for more efficient discipline in the Navy; referred to the Committee on Naval affairs. The House went into Committee of the Whole on the state of the Union on the President's message. Mr. Houston offered a series of resolutions, distributing the various branches of it to the appropriate standing committees, which was adopted.

Dec. 12.—Mr. Wheeler presented a memorial from the N. Y. Chamber of Commerce, asking Congress to send an expedition in search of Dr. Kane; referred to Committee on Naval affairs. Mr. Cutting introduced a joint resolution authorizing the President to adopt measures to procure the erection of a first class light house at Cape Race. The House then went into Committee, taking up the Indian Appropriation bill.

Dec. 13.—Mr. Mace, of Ind., introduced a bill to restore the Missouri Compromise, and a wide and lengthy discussion followed for the day.

Dec. 14.—The bill authorizing the Secretary of the Treasury to establish additional naval relief stations along the coast of Long Island and New Jersey, and change their stations, was passed. Mr. Greenwood offered a resolution instructing the Committee on the Judiciary to report a bill at an early day, providing punishment for depredations on the U. S. mails in the Indian territory; adopted. The House then went into Committee on the Invalid Pension bill, which was passed.

Dec. 15.—Mr. Houston, from the Committee of Ways and Means, reported a bill making appropriations for civil and diplomatic expenses of the Government for the year ending June, 1856. Referred to the Committee of the Whole on the state of the Union. Mr. Eddy introduced a bill making appropriations for continuing and constructing break-waters at Michigan city, Ia., and otherwise improving that harbor, which was referred to the Committee on Commerce.—The House then went into Committee on private business. A bill for the relief of children and heirs of Maj. Gen. De Kalb, was discussed and amended by appropriating $66,000 for that purpose. This, together with four other private bills, subsequently passed.

"THE GOOD TIME COMING"—Has often been postponed by publishers, as well as other people, but in our case we really believe it is arriving—the occasional complaints of hard times to the contrary notwithstanding. Indeed, the train is so near that we already hear the shrill whistle,—and can accurately calculate the moment of arrival at the RURAL station.—In truth, a thousand good friends (each one a first-class locomotive in "human form divine,") are hailing us with cheerful tidings from all parts of the Union. To those whose trains have already arrived, we return the sincere acknowledgments of an appreciating heart—and to them, and the numerous friends who are generously exerting themselves to ship valuable cargoes to this depot, we extend the assurance that no effort shall be wanting to return more than "value received" for investments in RURAL stock. And as said stock is apparently on the rise, all who wish to invest should lose no time in handing in their names and funds to those who are kindly acting in our behalf throughout the country.

TRIAL OF ARRISON.—This individual was on trial last week at Cincinnati, charged with the murder of Mr. ALLISON and wife by means of an infernal machine sent them in a box. The victims, it will be recollected, were both killed by the explosion. The evidence was all in, and the counsel commenced summing up on Saturday.

VESSELS FROZEN IN.—The sudden freeze caught the forwarders here and elsewhere in a rather awkward predicament. Thirty-six vessels bound east, laden, among other things, with 175,000 bushels of wheat and corn, were frozen into the Welland canal.

FIRES IN PHILADELPHIA.—Two or three extensive conflagrations have recently occurred in Philadelphia, destroying property to the amount of half a million dollars or more. One of the fires at least was the work of an incendiary.

The Rural's Credentials.

Now that hundreds of its readers are kindly making efforts to augment the circulation of the RURAL, we may properly copy a few extracts from numerous complimentary notices of the Press—as an endorsement of their good opinion, and recommendation of the paper to non-subscribers. The generous and influential friends who are forming clubs in their respective localities, can sustain any reasonable assertions in behalf of the RURAL, by referring to these extracts from several of the most able and reliable journals in the Union. If necessary, or space permitted, we could easily give pages of similar credentials, and also the most complimentary letters from subscribers—for we have numerous epistles from Farmers, Mechanics, Merchants, Professional Men and Statesmen, all speaking in the highest terms of the merits and usefulness of this journal. For the present, however, the following condensed notices must suffice:

MOORE'S RURAL NEW-YORKER has become a giant among its kind. With a subscription verging fast to 50,000, and with a conductor who knows how to polish it with every grace of the art, and how to accomplish it with the best talent of the age—it is not surprising that it is now the leading agricultural paper of the country.—*Christian Adv.*

MOORE'S RURAL NEW-YORKER commences a new year with a new and beautiful dress, and, as ever, rich in its address. It is full of variety, original and select. No paper on our list of exchanges comes so near our idea of perfection, for a secular family paper, as the Rural. It has always maintained a high moral standard.—*N. Y. Observer.*

THE RURAL NEW-YORKER is a paper the fame of which is without a blot. Characteristically Agricultural, it is in the broadest sense a Family Paper, one which may be admitted without doubt as to its tendency. It has an immense circulation, and merits patronage wider still. Its readers are like Oliver, always asking for—MORE.—*New York Recorder.*

MOORE'S RURAL NEW-YORKER is one of the very best Agricultural and Family Newspapers in the world. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., is of the highest order.—*Louisville Journal.*

ITS leading feature, perhaps, is Agricultural; but in the departments of the Arts, the Sciences, Education, History, Literature and the Daily News, it is most ably and admirably sustained—is an honor to the newspaper family, as well as to its editor and proprietor.—*Mich. Chris. Herald.*

THE RURAL NEW-YORKER is decidedly the best Agricultural paper in the United States, in each and all of its departments, and well merits the eminent success which has attended its enterprising Proprietor.—*Boston Olive Branch.*

The Rural New-Yorker is one of the most ably edited, interesting and successful papers of the class in this country, and has acquired a very large circulation.—*Boston Jour.*

We have so frequently commended the *Rural New-Yorker* that an attempt to add thereto would be like "lending perfume to the rose." In our opinion it is the best Agricultural, Literary and Family paper extant.—*Pa. Herald.*

Moore's Rural New-Yorker is a capital paper. It is published at Rochester, one of the most beautiful cities in the country, is printed well, is judicious in its extracts and subjects for editorials, and opens rich, like a hoary comb, —having sweets in every cell.—*New England Farmer.*

We think it a model paper for the farmer's family, and of a kind much more likely to be patronized, than those purely agricultural. If we were to start a periodical again, it would be in imitation of the Rural New-Yorker.—*Am. Agriculturist.*

THE RURAL NEW-YORKER we can recommend conscientiously, as pure, good, interesting, and useful—calculated to make every family into which it is introduced, both wiser and better.—*Arthur's Home Gazette.*

Independent of its being the very best agricultural paper that has ever come under our notice, its literary merits are unsurpassed. It is certainly the best and most useful paper of the kind we have ever seen.—*Pa. Whig.*

MR. MOORE *ought* to make a fortune out of his journal, and we trust he will, for *he is helping to make the fortune of the country.* We bid him "God speed."—*O. Statesman.*

[For additional notices, see next page.]

More Shooting in Kentucky.

ONA PERKINS, of Covington, Ky., last week shot a lawyer by the name of CARPENTER, at the same place, three times with a revolver, inflicting mortal wounds. So far as it appears the latter was unarmed and made no resistance. PERKINS was arrested on the charge of shooting with intent to kill, and in default of $10,000 bail, was committed to jail to await his trial at the March term of the Circuit Court.

Counsel for the prisoner, it is presumed, will move to change the venue to Hardin County, and call upon the Court to furnish them with the MATT. WARD jury; and JOHN J. CRITTENDEN, NAT. WOLFE, GOV. HELM and TOM MARSHALL are expected to volunteer their services in the defence.

DEBTS AND ESTATE OF DANIEL WEBSTER.—The North Bridgewater (Mass.) Gazette states, that the executors of the estate of the late Daniel Webster, Fletcher Webster and Richard M. Blatchford, were to have their petition for leave to sell real estate to pay debts, considered at the court of probate in Plymouth, on Monday last. The debts due from the deceased amount to $135,230 89; the charges of administration amount to $2,500; the personal estate is valued at $28,522 10. The real estate was appraised at $35,500, and incumbered to the supposed amount of $30,000.

DEATH OF LOCKHART.—The London journals received by the Pacific, announce the death of John Gibson Lockhart, Son-in-Law of Sir Walter Scott, as having taken place on the 25th ult. His health had been failing for the last two or three years, and in 1853 he made an ineffectual attempt for its improvement on the Continent. Lockhart was well known in the world of letters by several fictitious productions of considerable merit; but his claim to distinction mainly rests on his biography of Sir Walter Scott, and his connection as editor in chief with the Quarterly Review.

AFFECTIONATE.—The Queen of Great Britain in a recent public document, alludes to her husband by the following terms and titles:

Our most dearly beloved Consort, His Royal Highness, Francis Albert Augustus Emanuel, Duke of Saxony, Prince of Saxe Coburg and Gotha, Knight of Our Most Noble Order, and Field-Marshal in our Army.

[THE following beautiful poem was received too late for its appropriate place in this week's RURAL, but we will not therefore withhold it from our readers.]

CHRISTMAS EVE.

BY IDA FAIRFIELD.

Night came down, o'er Bethlehem's plain,
Holy night, with starry eyes,
Spreading out her silvery veil,
Softly, in the evening skies.

By their calmly slumbering flocks
Shepherds watched the hours away,
Waiting with commissive trust
For another dawning day.

Lo! the chambers of the East
Sudden ope their gates of gold,
And the noon-tide gleam is pale
To the splendors they unfold.

Then a form of radiant light,
Glory-wreathed, his dazzling brow
Meets the startled Shepherd's sight;
At his feet they trembling bow.

Sweet the Seraph's voice, and low,
Falling softly on the ear,
"Tidings of great joy I bring,
Little ones have ye to fear.

"Lo! the Saviour of a world,
Christ, the mighty Lord of Heaven,
Clothed in helpless, human guise,
Unto you this day is given"

Circling round on azure wing,
Countless seraph forms appear,
"Glory unto God," they sing,
"Peace, good-will forever here."

Harp and voice are borne away,
Sounding up the vaulted sky,
Heralding that glorious day,
Man no longer born to die.

Centuries have passed since then,
Still we hear the Seraph's voice,
See the Star of Bethlehem;
Christian heart, rejoice, rejoice!

Independence, Dec. 18, 1854.

Literary Notices.

BRUNO; or Lessons of Fidelity, Patience, and Self-Denial taught by a Dog. Harpers' Story Books, No. 1. Dec., 1854. New York: Harper & Brothers.

THIS is the first of a monthly issue of a series of Narratives, Dialogues, Biographies, and Tales, for the instruction and entertainment of the young, by JACOB ABBOTT. Each number contains 160 pages, is complete in itself, and is embellished with beautiful engravings. Single copies 25 cents, or $3 per annum. Sold by E. DARROW & BROTHER. The Messrs. DARROW have a beautiful and complete assortment of gift-books, both for the juvenile and older public, and all articles in their line appropriate to the present holiday season.

CAROLINE; A Franconia Story. By the Author of the Rollo Books. New York: Harper & Brothers.

AGNES: A Franconia Story, &c., &c.

THE "Franconia Stories" are ten in number, and the volumes above named complete the series. The author, JACOB ABBOTT, is a favorite with the young people, for they never look to him in vain for pleasant stories, mingled with instruction useful in every-day emergencies. The characters are well drawn, and seem real children, and not mature men and women in youthful guise, as is too often the case. Sold at DARROW'S.

LATER YEARS. By the Author of "The Old House by the River," and "The Owl Creek Letters." New York: Harper & Brothers.

THIS pleasant volume is composed of country, city, and sea-side letters, descriptive of scenes and incidents met and recalled by the writer. His stories are well sketched and their pathos genuine and hearty, and few who have read the former volumes will fail to possess themselves of this. At DARROW'S.

AMONG the new publications awaiting notice are FANNY FERN'S new novel, "Ruth Hall;" "BARNUM'S Autobiography;" PATTON'S "Life of Horace Greeley;" "Nothing Venture, Nothing Have," by Cousin ALICE; KIRWAN'S "Parish Pencilings," etc.

Robbers' Cave.

A CITIZEN of Plymouth County, Mass., recently discovered, in the woods between Plymouth and Kingston, a subterranean apartment the mouth of which was covered with a board. The apartment under ground was some fourteen feet square by six feet high, and in it were found several pieces of bagging, fragments of bottles, and other articles, indicating that it had once been the rendezvous of quite a number of persons. The place was built of cedar trees, which had been cut down from the vicinity, and the top branches had been taken in different directions, so as not to draw attention to the spot where the timber was used. It is supposed that the dirt removed in excavating the place was carried in various directions and covered with leaves, to prevent suspicion. It was evident, from the whole appearance of the premises, that the place had not been visited for many years. The affair creates considerable curiosity, and it is called by the inhabitants "The Robbers' Cave."

COST OF FUGITIVE SLAVES.—On the 7th inst. the Mayor of Boston received a U. S. Government draft for $14,165 78 as the cost of returning to service and labor the fugitive slave ANTHONY BURNS. The items were, for military expenses $13,115 78; for extra police $1,050.—This is rather an expensive speculation, as a dozen good, able-bodied negroes could have been purchased for the same money in the slave mart of Richmond.

SEE page 407 for our usual column of news paragraphs.

News Brevities.

—— Depositors are running the New York Savings Banks.

—— The corporation of San Francisco have commenced the Russ pavement in that city.

—— The Common Council of the city of London have voted £2,000 to the patriotic fund.

—— Messrs. Herr & Co., of Wheeling, are now killing 1,500 hogs daily.

—— The Washington National Monument has reached the height of 170 feet.

—— Counterfeit 5's on the Casco Bank, of Portland, Maine, are in extensive circulation.

—— The Public Libraries of the United States contain near 5,000,000 of volumes.

—— There are twenty-eight lines of omnibusses in New York, running 682 vehicles.

—— According to the synagogue rolls, there are more than 121,000 Jews in the United States.

—— The merchants of Port Hope have held a meeting in opposition to the proposed new Canadian Tariff.

—— The New York Express estimates that there are five thousand mechanics out of employment in that city.

—— People crossed the Hudson River at Albany, Dec. 8th, on the ice. Thermometer, 10° below zero.

—— The liabilities of Hill, Carpenter & Co., wool dealers at Providence, who have failed, are $500,000.

—— The total number of prisoners in England is twenty-one thousand six hundred and twenty-nine.

—— The Legislature of Nova Scotia on Monday week adopted the Reciprocity bill by a vote of 32 to 10.

—— A band of gipsies are living in Philadelphia, and cause much activity among the police from their burglarious operations.

—— The house of Blodgett & Co., of Boston, failed on the 11th inst. for the snug sum of two millions of dollars.

—— An application will be made to the N. J. Legislature to annex Hoboken to Jersey City, as the 5th Ward of said city.

—— The trial of Arrison for the murder of Isaac Allison and wife, in Cincinnati, commenced on Monday.

—— It is said the Russian Government has offered Mr. Collins nine hundred thousand dollars apiece for his steamers.

—— Upwards of one hundred thousand tuns of merchandize were frozen into the canal between Albany and Syracuse.

—— The landing of the Pilgrims is to be celebrated in Montreal, for the first time, on Dec. 22d, by New Englanders residing there.

—— Two cargoes of coal from the mines at Shamokin, have arrived in Philadelphia for the benefit of the destitute poor of that city.

—— Six of the prisoners confined in the New Jersey Penitentiary, were pardoned by the Court of Pardons at their late session.

—— The Boston Post says the importation of salt has been so large the past six months that it is now difficult to find storage for it.

—— Mr. H. Smith has recovered $3,300 of the city of Lowell, for injuries sustained by reason of a defect in the street. Exceptions were taken.

—— A young lady in Paris lately made her fortieth ascent in a balloon, and landing in the country, the rustics maltreated her as a witch.

—— It is proposed to connect Newark with New York by another Railroad. An application to the New Jersey Legislature to that effect is announced.

—— The building of the contemplated new St. Patrick's Cathedral in New York, has been postponed by Archbishop Hughes for a year or two.

—— The Washington correspondent of the Evening Post says that Col. Steptoe, of the army, has been appointed to succeed Brigham Young, Gov. of Utah.

—— Geo. W. Kendall, of the N. O. Picayune, has recently taken unto himself a wife. She is a Parsian by birth, and the marriage was consumated at Paris.

—— The Senate Committee appointed to examine into the alleged corruption in the management of the Board of Emigration, are busy investigating affairs in New York.

—— The Hartford Times learns that Hon. L. P. Waldo, Commissioner of Pensions, is seriously ill at Washington, having worn himself down by over-exertion in his official duties.

—— The Know Nothing's have elected their Mayor in Boston—6,403 against 5,950. So in Roxbury, Lowell and Worcester. In Charlestown the anti-K. N. had a large majority.

—— Notice is again given that an application will be made to the next Legislature for an act to authorise the construction of a bridge over the Hudson River at Albany.

—— The artesian well, in Charleston, S. C., after reaching a depth of 1,211 feet, at length yields a stream of two and a half gallons per minute, or 150 gallons per hour.

—— Mt. Vernon, the new town site above Nebraska City, is now about being surveyed into lots, and it is said to be a most beautiful and delightful site for a town.

—— Madame Poultney, who sued for possession of lands in New Orleans, worth more than two millions of dollars, has been beaten in the United States District Court.

—— The Assembly Chamber at Albany has been enlarged by the addition of some 800 square feet to its superficial area. It has also been refitted, and is ready for use.

—— Thomas M. Yates, one of the Jurors who granted a verdict of Not Guilty in the Ward case, is on trial before the Hardin County Circuit Court, at Elizabethtown, Ky., for perjury.

—— On Saturday week, as we learn from the Spy, land in Worcester to the value of $36,000, belonging to Eli Thayer, the President of the Kansas Emigration Society, was sold at auction.

—— The Newbury (S. C.) Sentinel calls loudly upon the Legislature to establish a penitentiary. It says, "High handed crime and lawless acts of violence are upon the increase in this State."

—— Queen Victoria does not accept the grand cross of the order of Guadaloupe, offered by Santa Ana, and the Emperors of France, Prussia and Spain neglect to acknowledge similar honors.

—— Fifty-three slaves, freed by the will of the late Dr. Charles Everett, of Virginia, have left Petersburg, Va., for Pennsylvania, where they are to be located with an outfit valued at $1,500 for each.

THE RURAL FOR 1855.

Having nearly completed our arrangements, we can safely announce that the Sixth Volume of the Rural New-Yorker will, extraordinaries excepted, *far surpass* either of its predecessors, in both Contents and Appearance. To redeem this pledge, no reasonable effort or expense will be wanting, for we are determined to render the paper more and more worthy its extensive *National Circulation*. In a word,—while we gladly extend the hand of fellowship to our contemporaries, for there is room for all,—we shall strive to make the Rural by far the best Agricultural, Literary and Family Newspaper published.—Thus believing and intending, we frankly ask the kind offices of each and every reader who can consistently lend a portion of influence in support of this publication. Please read the annexed announcements.

OVER $700 IN CASH PREMIUMS!

Post-Masters, Agents, Subscribers,

And others who wish to benefit themselves, and promote the interests of community, are respectfully invited to note a brief announcement,—one which is, we confidently believe, most worthy their best attention. After bending low in grateful acknowledgment to Post-Masters, their Assistants, Agents and Subscribers, whose exercise of influence has enabled us to render Moore's Rural New Yorker the *first* Journal of its class in Circulation, Influence and Popularity, we desire to communicate, in a few words, the substance of a Prize List which *far exceeds*, in both *numbers* and *value*, any of its predecessors. Relying upon *acts* rather than *words*, we proceed without circumlocution or palaver, to invite your attention to the following splendid list of OVER

$700 IN CASH

PREMIUMS FOR SUBSCRIBERS:

ONE HUNDRED DOLLARS for the largest list of Yearly Subscribers to the Rural New-Yorker,—the payment to be remitted according to our Club terms, previous to the 1st day of February, 1855.

EIGHTY DOLLARS for the next (second) largest list, as above specified.

SEVENTY DOLLARS for the third list.

SIXTY DOLLARS for the fourth list.

FIFTY DOLLARS for the fifth list.

FORTY DOLLARS for the sixth list.

THIRTY DOLLARS for the seventh list.

TWENTY-FIVE DOLLARS for the eighth list.

TWENTY DOLLARS for the ninth list.

TEN DOLLARS to EACH of the *five* persons sending the 10th, 11th, 12th, 13th, and 14th lists, as above.

FIVE DOLLARS to each of the *five* persons sending the 15th, 16th, 17th, 18th, and 19th lists.

THREE DOLLARS to EACH of the six persons sending the 20th, 21st, 22d, 23d, 24th, and 25th lists.

☞ We also offer the following very liberal list of

CHRISTMAS CASH PREMIUMS.

FIFTY DOLLARS for the largest list of subscribers to the Rural New-Yorker, sent in or mailed according to our terms, on or before the 26th day of December ensuing, (1854.)

THIRTY-FIVE DOLLARS for the next largest list, as above.

TWENTY-FIVE DOLLARS for the next list.

FIFTEEN DOLLARS for the next list.

TEN DOLLARS for the next list.

FIVE DOLLARS for the next list.

☞ Persons competing for Christmas Premiums are not excluded from the February prizes, so that one person may receive *One Hundred and Fifty Dollars, in Cash!*—another *One Hundred and Fifteen Dollars*, &c.

[In order to give Post Masters, Local Agents, &c., a fair and equal chance, traveling agents, post-riders and clerks of Rochester are excluded from competition for any of the above Premiums.]

SPECIFIC PREMIUMS.

In order to reward every person who may aid in extending the circulation of the Rural New-Yorker, we offer to such as do not compete for any of the preceding Premiums, the following liberal gratuities for subscribers forwarded *previous to the 1st of April*, 1855:

THREE DOLLARS, in Books, or a handsomely bound volume of the Rural for 1854, for THIRTY subscribers.

To every one remitting for twenty copies ($25,) an extra copy of the Rural, and either volume of the Wool Grower and Stock Register—*or*, The Horticulturist for 1855.

The same premium to every one remitting for FIFTEEN copies, ($20,)—for TEN copies ($15.)

To every one remitting for six copies ($10,) an extra copy of the Rural, *or* the Horticulturist for 1855.

For $5 we will send THREE copies of the Rural, and either vol. of the Wool Grower and Stock Register.

For $4 we will send one copy of the Rural, and either *Putnam's, Harper's, the Knickerbocker, Lady's Book*, or *Graham's Magazine* for one year.

For $3, we will send a copy each of the Rural and the Horticulturist for 1855.

$300 MORE!

As a further inducement to the friends and Agents of the Rural, we make the following liberal offer *in addition* to above Premiums:

To *each* of the *one hundred persons* who shall send us after this date, (Dec. 15,) the first clubs of ten or more subscribers, accompanied with the money according to terms, we will give a handsomely bound volume of the Rural New-Yorker for 1854—the cash prize of which is $3, and which will fill for that is almost any locality.—To those who cannot conveniently get the bound volume—as it will have to be called for or sent by Express, or otherwise outside the mail—we will give the Rural volume unbound, and the sixth and seventh volumes of the Wool Grower and Stock Register. ☞ Remember that this offer *is in addition to all other Premiums!*

All competitors for premiums are expected to adhere strictly to the following

TERMS, IN ADVANCE:

Two Dollars a Year. *Three Copies, one year, $5—Six Copies for $10—Ten copies for $15—Fifteen Copies for $20—Twenty Copies for $25, and any additional number at the same rate.* ☞ *As we are obliged to pre-pay American postage, our lowest Club price to Canadian subscribers is $1,50 per copy.* ☞ *To facilitate mailing, we prefer sending Club papers to one address at each post office, but the names of subscribers will be written on the papers if desired. Club papers sent to different post offices, and names can be sent in at different times. Bills of all specie paying Banks received at par on subscription.*

☞ Specimen numbers, show-bills, prospectuses, &c., sent free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money, properly enclosed, may be mailed at our risk, if addressed to

D. D. T. MOORE,
Oct., 1854. Rochester N. Y.

We have frequently commended the *Rural New-Yorker* that an attempt to add thereto would be like "lending new fame to the rose." In our opinion it is the best Agricultural, Literary and Family paper extant.—*Pa. Herald & Whig.*

Moore's Rural New-Yorker has, from its start, taken high rank, and rapidly increased in popular favor, and now stands without an equal in its sphere. High-toned, practical and scientific, it admits nothing stale, vulgar or uninstructive. As an agricultural, Literary and Family Newspaper combined, we know not its superior.—*Daily Union.*

A dozen candidates for public favor, it always affords us pleasure to notice, and especially when, as in this instance, the candidate is a little in advance of foreign competitors. The Rural, as an Agricultural and Family paper, is not surpassed in this country. Its various departments are under the supervision of practical men, educated especially in the matters which concern their province, and always contain valuable articles, editorial and others. It is handsomely printed, and profusely illustrated with wood cuts, descriptive of matters interesting to the farmer.—*Orleans Republican.*

The proprietor spares no pains to make the Rural New-Yorker one of the best Agricultural and Family Newspapers published in America, and we certainly think it is second to none that we have ever seen.—*Bowmanville (C. W.) Messenger.*

It is a paper that we delight to praise—and should be in the hands of every citizen farmer. No better thing, in hour and various interest, meets our eye. To farmers it is almost indispensable.—*Youngsville (Pa.) Express.*

The best Family Newspaper we know of, for the country, as it is devoted to Agriculture and Education, together with Literary and Miscellaneous reading. It is ably conducted and neatly printed, and will give satisfaction, we are confident.—*Elkhart (Ind.) Journal.*

The Rural is one of the best Agricultural publications in the world, and deserving this wide and increasing patronage it receives.—*Cayuga Chief.*

Foreign Intelligence.

Arrival of the Pacific.

The Pacific arrived at New York December 13th. She left Liverpool on Thursday morning, 30th ult., at seven o'clock, bringing 134 passengers.

The Niagara sailed from Liverpool on the 25th, with 54th Regiment of Infantry, and a fine company of the 56th and of the artillery for the Crimea.

Since the battle of the 5th November, no incident of importance has occurred. Both sides claim the victory.

The report of another battle on the 13th is discredited. The necessity of reinforcements to preserve the very existence of the Allies, has caused at least 30,000 additional men to be now in position before Sevastopol. Russian reinforcements are also augmenting, and another great battle or series of battles must be fought before the fate of Sevastopol is decided.

The Diplomatists of Russia, Austria, Prussia and the lesser Germanic States, are particularly active. England and France are taking a higher tone than hitherto; have notified the Germanic Governments that the Western Powers are no longer recognized by the four points as a basis for negotiation; that they intend to hold the Crimea, and in their own time dictate terms of peace.

The allied generals demanded an explanation from Menschikoff, respecting the order said to have been issued by him, to give no quarter. A Russian major, who gave orders to his men to kill the wounded, has been taken prisoner and hanged.

On the 18th, the intelligence was telegraphed over Warsaw. Between 9th and 13th, General Mayran's division of 6,000, together with 2,300 additional French troops, left Constantinople for the Crimea. 10,000 Turks and 6,506 Egyptians had also taken their departure. The Journal of Constantinople says that 40,000 more Turks will be shipped with all speed. The reinforcements dispatched from France and England, on hearing of the battle of 5th Nov., were beginning to arrive. 1,200 men had landed from the steamer Queen of the South, and other steamers near their destination when the mail left.

A terrible storm occurred on Ægean and Black Seas on the night of the 14th. The minarets of the mosque of Sultan Achmet, at Constantinople, were blown down. Thirty-two English transports were lost on the 14th. The Prince and Sea Nymph foundered with all on board. Three mail steamers have been stranded. The Sanspareil was driven on shore on fire. The Britannia has five feet of water in her hold. The Agamemnon was stranded, but was got afloat again. The Lampron's machinery was damaged. The Retribution was saved by throwing her guns overboard. The Terrible has also escaped. The Henry the Fourth and Plato are lost. An Egyptian three-decker went down in the storm, with the Admiral, Hassan Pasha, and 700 men.

Very contradictory statements are made respecting the movements of Omar Pasha. On the 19th, he, it is said, received orders not to advance into Moldavia. The Russians continue on the Pruth with their patrols upon the Turkish bank of that river.

Suleman Pasha, who commanded the Turks in the Crimea, has been degraded to the rank of private soldier for the bad behavior of his troops on the 5th November.

The Hospodar of Wallachia has announced that the free exportation of corn will be permitted from the Danubian Principalities next spring.

The Baltic.—It was reported at Kiel, on the 23d, on the faith of a telegraphic despatch, that on the 19th or 20th, a portion of the Russian fleet left Helsingfors, and captured two British cruisers in the Gulf of Finland. The departure of the British fleet had been further postponed till the 14th December. The navigation of the Gulf of Finland is still open, and there is very little ice from Sweaborg to Constradt.

Austria.—A despatch from Vienna to the date of Sunday evening 26th, to the London Times, says it is now positively affirmed that Austria has accepted, with some slight modification, the proposition contained in the Russian note of the 15th. A day or two since, Bavaria announced her accession to the policy of Austria on the Oriental question, and promised her support in the German diet.

Great Britain.—Parliament is summoned to assemble on the 12th Dec. Ominous rumors are prevalent of a ten million sterling loan. A ten per cent. income tax. Increased powers will also be had for the embodiment of the whole militia of the Kingdom by compulsory ballot if required.

Rear Admiral Bruce is appointed commander-in-chief of the British squadron at the Pacific station, and leaves England on the 9th for New York to communicate with the British Minister at Washington previous to crossing overland.

Liverpool Markets.—Liverpool, Nov. 28.—Corn trade very dull. White wheat 12s 3d@12s 9d; yellow corn 43s 6d@44s 6d.

Demand for beef more active. Stock lower than for several years. The first new will come to a good market. Pork in fair request. Bacon, 1s reduction. Lard declined 6d to 1s.—Sales are difficult at 53s@53s 6d. Tallow, flat—64s@64s 6d.

Richardson, Spencer & Co. quote Western Canal Flour at 40@42s; red and mixed Wheat 11@12s.

California News.

Arrival of the Northern Light.

The Northern Light arrived at New York Dec. 15, bringing 230 passengers and $208,000 on freight.

The U. S. steamer Mississippi was expected to leave San Francisco for the Atlantic States in about ten days.

The news is of the most meagre description. Murders and other outrages abound as usual.

A railroad from Colorado to Los Angelos is in contemplation. Several specimens of good bituminous coal had been found on Mud river, near Ureka.

Mr. Washburn, U. S. Surveyor, has discovered a salt water lake in the neighborhood of Kern river and the Tejon, 8 miles long and 5 wide. The pearl and other fisheries were beginning to excite some attention.

The slaughter of the emigrant trains by the Snake Indians, took place in the vicinity of Fort Boise, a post belonging to the Hudson Bay Fur Company, and it is charged that the Company's agents have been selling the Indians arms and ammunition since hostilities commenced. A force of U. S. troops under Maj. Hiller, and a number of volunteers, had made a fruitless attempt to overtake and chastise the offending Snakes. The Fort was in great danger of attack from the Indians, and assistance had been called for. The warlike attitude of the Snakes, it is thought, will materially check overland emigration into Oregon next season.

Notwithstanding the cry for water, the mining news is of a very cheering description, and new diggings are reported between Weaversville and Oregon Gulch, which promise well. Miners on Salmon River are reported to take out $100 per day per man, and it is said there will be room there for ten thousand men for the next ten years.

A salute of 21 guns was fired on the twenty-third on board the American ship Zenobia, in honor of the affair at Peropanoskwi and the failure of the Allies at Sevastopol. The Russian Consul and other guests were entertained with a collation on board, and the Russian flag was run up.

The English and French fleet, with the exception of the Pique, had left San Francisco. Some had gone to Honolulu, others to South America, &c.

From the Sandwich Islands.—Dates from the Sandwich Islands were to the 9th November. The treaty had not then been consummated. The Honolulu correspondent of the San Francisco Herald says that Mr. Greig had addressed a letter to the Minister of Foreign Relations, insisting upon an immediate conclusion of the treaty, or else that all negotiations should terminate forthwith. In consequence of this, it is said a peremptory message was sent for Prince Sipohiho, whose signature was only wanting. The treaty was looked for at San Francisco in about two weeks. The U. S. ships St. Mary's and Portsmouth, were still at Honolulu.

The markets generally showed no change from last accounts, although the country demand had somewhat slacked.

Selling Uncle Sam's Farm.—The General Land Office has done a big business during the past fiscal year. About 9,500,000 acres have been surveyed, and of these 7,080,000 have been brought into market, which yielded a revenue of $9,250,000 in round numbers. This shows to what extraordinary extent speculation in lands and real estate generally has been carried on the past season, and explains in a measure the tightness of the money market in the Western States.

During the past fiscal year some three and a half millions of acres were entered with military land warrants, 11,000,000 of acres were claimed as swamp lands by the States, and 1,500,000 (the residue of former appropriations) were selected as donations for roads by the General Government—showing upward of 20,000,000 of acres were, in all, disposed of during the last fiscal year.

The increased revenue on cash sales amount alone to $6,000,000.

A Feature Scene.—At the Centre market this morning, a little boy, nine or ten years old, a son of Mr. Stanley, who resides on the Island, was seized in the crowded market place by an angry bull dog, from which he could not be rescued until the animal was killed by blows from a number of cleavers, which cut open his head, and nearly severed it from his body.—Fortunately, the child, protected by the thickness of his clothing, was not dangerously hurt. The owner of the dog was fined three dollars for permitting him to go into the market place. —*Washington Globe, Nov. 30.*

Trees.—The Humbolt mentions a spruce pine log, 26 feet long, which turned out 4,000 feet clear stuff, without knots or windshakes. The tree made 13,000 feet clear lumber. We do not believe it can be beat in the country, though we have trees of other species much larger—for instance, the red wood—they are estimated to turn out upwards of 100,000 feet. That one tree will build two houses, each two stories high and fifty feet square, furnishing all the square timber, planks, shingles, &c., would not be credited in the Atlantic States.—*Cal. paper.*

Patriarchal Dog.—The Mobile Advertiser of a late date says: "A hound dog, belonging to Mr. W. F. Cleveland, of this city, recently 'shuffled off this mortal coil' at the extraordinary age of thirty years. Up to the age of twenty-eight, this dog was 'as good as any body's dog,' when he went into the decline, which, after two years, closed his eventful career. We have never before heard of such an instance of canine longevity, or even an approach to it."

Connubial.—A rather singular marriage contract was a few days since entered into in Tennessee. The wife is worth a cool fifty thousand. The husband is the rightful owner of a magnificent goatee. The contract provided that the husband is to have no interest in his wife's estate, shall collect none of her debts and chastise none of her servants, and that he shall pay her one hundred and fifty dollars per annum for board.

☞ The editor of the Woonsocket Patriot has received two eggs, no bigger than ordinary marbles, which were laid by a hen belonging to Mr. John Bates, of Blackstone. Mr. Bates says the hen often lays two such eggs in a day, and occasionally one of these wonderful productions contains a smaller egg inside.

Market Intelligence, &c.

Rural New-Yorker Office,
Rochester, Dec. 15, 1854.

Trade is again great activity in our markets since the renewal of the sleighing, which partially disappeared during the latter part of last week. Trains have not changed in quotations, except Corn, which is five cents higher, selling readily at 85 cents.

Pork, Beef, and Mutton, in the carcass, come in freely of former prices.

Hay is a little better, the extreme limit being $17. Potatoes are quoted a shilling higher on the bushel.

NEW YORK MARKET—Dec. 18.

FLOUR—The transactions in flour to-day have only been to a limited extent. Sales State at $8@8,50 inferior to choice and favorite, cash to-day at the former price; $8,75@9,25 common to good Ohio, Michigan, Indiana and Wis.; $9,37@9,75 extra Mich.; $10,75@11,75 extra Genesee. Included in the sales are 700 bbls. Utah for export, at prices within the range. Canadian, to-day small, and holders generally insist upon prices above the views of purchasers. Good common grades in bond are held at $9; sales choice and extra at $10 duty paid.

GRAIN—In the Wheat market there is but little doing, and holders insist upon higher prices, which check transactions. Stock small and rapidly decreasing. Shippers are out of the market, while millers purchase liberally at a slight reduction from present prices. Prime white Mich. is held at $2,30 and prir. Sales very inferior red Southern at $1,67½c; good white Canadian at $2,09 duty paid. Rye in good demand, both for home trade and export—supply small. Holders have materially advanced their prices, being unwilling to sell at less than $1,45 delivered. The Barley market is nominally the same—supply and demand moderate. A small sale of inferior was made at $1,25. The range for common to good is from $1,30@1,36. Transactions in Corn only to a very limited extent, and market without important change. Sales at 94@95c Wat mixed in store; the latter; 95@96c new white and yellow South; round selling at 85@100c. Oats in good demand, to part for distilling. Sales at 62c@66c latter price for handsome Chicago, taken by distillers.

PROVISIONS—The Pork market continues dull, and prices droop. The difficulty of obtaining money has a most depressing effect upon the market. Sales at $12,75 mess; $12,12½@25 prime, and $10@10,50 prime mess.—Dressed Hogs unchanged—sales at 6¾c@6¾c. Butter in good request at 12½@16c Ohio, 19@20c State.

ALBANY MARKET—Dec. 18.

FLOUR—There is a moderate business doing in Flour at about the closing prices of last week; sales at $10@11,25. There was but little Grain offering, and the current prices were—Rye $1,27, Barley 1,29@1,35, Oats 52@55, Corn 87.

BUFFALO MARKET—Dec. 18.

FLOUR—Opens with a full demand. Sales at $9,62½ for choice Upper Lake, and $8,87½ for fancy Indiana.

GRAIN—Very little inquiry—no sales to quote.

ALBANY CATTLE MARKET.—Dec. 18.

At W. W. Woolford's Bull's Head, Washington St.—Real Cattle—320 at market. Prices—Extra $8,00; 1st quality $7,50; 2d do, $6,50@7; 3d, $6.

Cows and Calves—Few in market. Prices range from $25, $30@50.

Sheep and Lambs—3,000 in market. Prices, Sheep from $2 to $4; Lambs from $1,50@3.

Swine—670 in market. Prices, live weight, $5,

NEW YORK CATTLE MARKET—Dec. 16.

Mount Pleasant Farm, Clockville, Madison Co., N. Y.

STARR'S PREMIUM PIANO FORTES.

Every person in this vicinity, desirous to purchase a Piano Forte, will be well repaid, by visiting my rooms, where he can *buy directly from the manufacturer*, over the commission of an agent, and select from the largest assortment in Western New York, as I have constantly on hand from 15 to 30 finished instruments, and from 50 to 100 others in process of construction, of various sizes, patterns, and prices, from $230 to $700 each. They embrace such a combination of excellencies, in their beauty, finish, strength, (to keep in tune,) exquisite touch—soft, deep, rich, full and melodious tone—as induces the belief, so often expressed by those who have bought, or used them, that "they surpass all others in the market." Their superiority was acknowledged when one of the most intelligent musical committees which ever acted on a similar occasion, *awarded us the then highest premiums*, when in competition with Chickering, Gilbert, Bacon & Raven, Wm. Hall & Sons, at the New York State Fair for 1851.—And the number since sold, with this daily *increasing celebrity*, fully justifies the report of that committee. They are manufactured of the best materials, in the most perfect manner, with metallic plate upon the Iso Choidal scale, with the Iso Elason Damper, and French Grand Action, *expressly for ritualing*—(numerous applications at wholesale, being constantly refused,) and can only be had at our rooms, where the instruments will be shown, and all orders promptly attended to. As it is fully settled that *a good Piano is cheap at almost any price*, and a poor one only a nuisance; and as I rely alone upon their merits to secure them favor with the public, I invite for them, the most careful examination and scrutiny, for all who wish to buy at my manufactory and show rooms, Nos. 45, 47, 49 & 51 Orphean Buildings, Main st., 2d Floor. Every instrument will have upon it the name of the subscriber, and be *warranted to please the purchaser.*

Rochester, June, 1854. FREDERICK STARR.

RARE SEEDS AT LOW RATES—BY MAIL.

The subscriber has a variety of choice seeds, of which he will send, *post-paid*, by mail, a sample of any one kind for 9 cents, 4 varieties for 24 cts., 25 varieties for $1, and any larger number in same proportion. Among his seeds are the following:

Melons.—White Mexican, South American, Red Mexican, Georgia, Bradford's, McKee's Mammoth, Ice Cream, Mountain Sweet, Winter, Martin's, Apple Seed, and the Virginia and Jenny Lind Citron or Canteloupe.

Cucumbers.—Negley's Seedling, Prolific Black Spine, and Two-foot.

Squashes.—Cushaw, Sweet Potato, Turban, Striped, Polk, Marrow, Apple, Norris' Scollop, and some others without names.

Pumpkins.—McKee's, Cape Cod Sugar, and Extra Sugar.

Beans.—Golden Eye, Bunca Vista, Stringless Pole, Three-foot, Yellow Six-weeks, &c.

Peas.—Prolific Dwarf, Queen of Dwarfs, May, English, Wilwatch, Japan and Oregon.

Corn.—Improved Dutton, Chinese Eight-rowed, Georgia, Rice, Evergreen, Ohio Colony, Darling's Extra Early Sugar, Ohio Sugar, Calico Flour, Rocky Mountain, Chocolate, &c.

Tomatoes.—Mammoth Red, Purple Skin, and Grape.

Also superior extra Improved Head Lettuce, Black Spanish Radish, Double Sunflower, Cape Gooseberry, Coriander, Clover, Rape, &c.

When orders are received that cannot be filled, the money will be promptly returned, free of expense. Send current Bank bills or postage stamps, and address (post-paid.) T. E. WETMORE,
251-3t*am North Cannon, Kent Co., Mich.

KEDZIE'S RAIN WATER FILTERS,

MANUFACTURED BY

J. E. Cheney & Co., Rochester, N. Y.

The use of water impregnated with lime and other mineral substances, is the opinion of all medical men, is one of the chief exciting causes of many diseases incident to the varied climate of this country.

These Filters have been fully tested, for many years, by hundreds of families in this city and in various parts of the country, and have in all cases given the highest satisfaction.

Rain water, of whatever color, taste, or smell, by this means becomes as clear as crystal. 236-1amtf

BUFFALO SEED AND AGL. WARE-HOUSE,

No. 196 Main street, Buffalo, N. Y.

Emery's Horse-Powers, Threshers and Separators, Seymour's, Pennock's and Ross' Grain Drills, Hickock's and Bailey's Cider Mills,

Together with a full assortment of Hay Cutters, Plows and other Implements, always on hand, at lowest market rates.

N. B.—Country dealers supplied on liberal terms.

Poetical.

THE APPROACH OF CHRISTMAS.

BY JOHN GAY.

When rosemary, and bays, the poets' crown,
Are bawl'd in frequent cries through all the town;
Then judge the festival of Christmas near,—
Christmas, the joyous period of the year.
Nine, heaven-born Chastity! thy blessings shed,
Bid meagre Want uprear her sickly head;
See, see! the heaven-born maid her blessings shed;
Lo! meagre Want uprears her sickly head;
Clothed are the naked, and the needy glad,
While selfish Avarice alone is sad.

SUMMER TOIL, AND WINTER CHEER.

Now after all our slaving, toiling,
In harvest or hot weather broiling,
The scorching weather's gone and past,
And shivering winter's come at last.
Good fires will now do very well,
For Christmas cheer begins to smell.
Those that in summer labored hard,
Are for a Christmas sloom prepared;
And from their store are able now
To feast themselves and neighbors too,
With pork and mutton, veal and beef—
Of country feasting, there are chief;
But those that yet would farther go,
May have a hollow bit or so,
Pig, capon, turkey, goose and coney,
Whatever may be had for money;
Such plenteous living's their enjoyment,
Who truly follow their employment,
While slothful, lurking, idle drones
Do scarce deserve to pick the bones.

[Poor Robin's Almanack.

Rural Sketch Book.

DENNIE AND HIS FATHER;

OR, THE DOUBLE PLEDGE.

On the shores of the beautiful Horiron, now known as Lake George, in the eastern part of New York, there lived a few years ago, a clergyman. His happy family of five daughters, and a darling son, a boy of more than ordinary promise, were growing up under the influence and instructions of parents such as few children could boast. Happy among themselves, with their home amidst the most beautiful scenery in nature, life seemed to them a bright and glad reality. But occasionally, a shade of anxiety might have been detected on the unusually calm brows of both father and mother.

The time at which my story commences, was before the days of Temperance. It was when every family kept a supply of ardent spirits constantly on hand; and children were accustomed to the dangerous beverage daily. So it was in this family. The little "Dennie," accustomed *every morning* to his glass of bitters, and to a treat every time a friend called upon the family during the day, soon began to show a decided fondness for the intoxicating drink, and sought for more frequent occasions to gratify his taste. His parents saw his growing appetite with alarm, and often admonished him, but with little effect; his appetite increased, and more than once they had the mortification of seeing their promising boy in a state of evident *intoxication*. Various were the remedies they tried, but with little good; and they could only hope that time, and his own good sense, would at length enable him to control the habit that threatened to ruin him. But an event occurred which blasted every hope, and they saw nothing before their child but a drunkard's life and a drunkard's grave.

One morning the little Dennie came running in with the eager inquiry:—"Mother, Mr. Smith is going to have a raising this afternoon, and James has invited me. May I go?"

"My son, if your father thinks it best, you may go," his mother replied.

His father's consent was readily obtained; and after dinner he started off full of happy anticipations. Arrived at the place, his attention was occupied for a time in the erection of the building; too soon, however, he discovered a keg on the premises which his ready genius quickly told him contained his favorite beverage. Without a moment's hesitation he asked for a drink, it was given him; he asked for another, and then another, and before the afternoon was half gone, "Dennie" was *dead drunk;* and the workmen had laid him on a board under a tree.

About four o'clock his father called to accompany him home; not seeing him about, he eagerly inquired for his child—they pointed him to the place where he lay. With a heart full of sorrow he carried him home to his mother and sisters. Together his parents watched by his bed during the tedious night that followed, not knowing but the dreadful stupor would result in his death; but fully resolved if he lived not to leave untried any effort that might promise to save him.

It was not until the evening of the second day that he was restored to perfect consciousness. His parents thought it best not to speak to him of the *cause* of his illness for some days, hoping his own reflections would do him much more good; but in this they were disappointed—he did not exhibit the first symptom of remorse or consciousness that he had done wrong.

About a week after the event just related, his father invited him one pleasant morning to take a walk. Their road lay along the shore of the lake, and was lined with stately trees on either side. For a time they walked on in silence.

"Dennie," said he, "do you know what it was made you sick the other day?"

"Why, I suppose I drank too much rum," he artlessly replied.

"Well, my son, do you know that I think you are in danger of becoming a drunkard?"

"Why, father, I know you tell me so, but I am not afraid of it. You drink rum every day, and you are not a drunkard; and when I get old enough to know how much it will do for me to drink, then I can keep from being drunk too."

They both seated themselves on a rock near the shore, and most faithfully did his father speak of the evils of intemperance; then taking a small gold watch from his pocket, which Dennie had long desired to call his own, he said "Dennie, if you will never drink any more rum, I will give you this gold watch. Will you do it?"

Rising from his seat, and looking his father full in the face, he replied, "if it is wrong for me to drink rum, "I *scorn* to be *hired not to drink it*. But I will tell you, sir, what I *will do*. If it is wrong for me to drink, it is wrong for you, and if you will stop drinking, I will."

Had a flash of lightning burst from the cloudless sky above them, his father would not have been more startled. How could he preach or perform the laborious duties of a pastor without his daily glass of bitters? How could he get up in a cold winter's night, and go to pray by the bedside of some dying parishioner, without a glass of something to prevent his taking cold? How could he attend the various ecclesiastical meetings of the Church without something to help him bear the fatigues of the journey?" The sacrifice was indeed great, but the welfare of his child demanded it. And summoning all his resolution, with a faltering voice, he replied—"*I will do it, my son.*" And thus they pledged themselves to *Total Abstinence.*

The lake, the trees, and the pure blue sky, were their only witnesses, save only that Holy Being who is everywhere. As they retraced their steps, his father taking the little watch from his pocket, gave it to Dennie, and said, "My son, you have long wished that I should give you this watch. It is yours as long as you keep your promise. Should that ever be broken, I shall expect you to return it to me; till then, let it be a token to you of this promise we have now made.

Years have passed; and the same little "Dennie" is now a distinguished clergyman in one of our most populous Western cities.—Four bright little boys call him father. The same little gold watch decorates his parlor wall, and often does he point to it and tell of his danger and his escape from the whirlpool of Intemperance.

THE CONTINENTAL BUTTONS.

When the American army was encamped at Valley Forge, a British officer, who was quartered upon the family of a gentleman in Philadelphia, had occasion to visit the camp, with a message under a flag of truce.

The lady of the house determined to accompany him, for the purpose of taking a suit of regimentals to her husband, who had been for some time with the Continental army; and, as it was necessary to conceal her design to the officer, the matter was accomplished by artifice.

Having taken the stuffing out of the cushions of the gig, the regimentals were inserted in its place, and things went on smoothly, until the roughness of the road suggested to the gentleman that his seat was none of the softest. In vain were two unoffending coat-tails condemned to eternal punishment, and rudely jerked from beneath their owner, who believed that they were the culprits, and in vain were his pockets searched, in hopes that the removal of a stray key or pen-knife would alleviate his misery.

Perceiving the trouble, and knowing the danger of discovery, the lady taxed her powers of conversation to the utmost, in hopes of diverting his attention from so pressing a subject; but the gig would bump on, and the Continental buttons obstinately insisted on avenging their country's wrongs upon the person of the enemy, doubtless "whispering in their sleeves,"

"See his posture is not right,
And he is not settled quite;
Look now at his odd grimaces—
Saw you e'er such comic faces?"

while he, poor fellow, inwardly cursed the primitiveness of Yankee cushions, and sighed for his luxurious quarters.

Weary miles were traveled, the captain still suffering the penalty of his loyalty, when suddenly the truth flashed across his mind, and memory recalled certain mysterious conversations he had overheard in the house, about broad-cloth and embroidery. The secret was then discovered, but his troubles were not yet over, for he now found himself in the horns of a dilemma as uncomfortable as the continental buttons, and he rode on perplexed between his duty to his King, and his obligations to the lady.

Too much of a gentleman to betray her, and yet too loyal an officer willing to carry aid and comfort to the rebels, he hesitated long as to the course he should pursue, but his gallantry at length got the better of him, and bravely submitting to the stern infliction, he concluded not to verify his suspicions by ocular demonstration.

A significant smile and gesture alone informed his companion that the artifice was discovered, and the rebel garments were suffered to reach their destination unmolested.

Posterity may settle the question as to whether the energy or ingenuity of the young wife deserves the more praise, and whether the duty of the officer should have superceded that of the gentleman; but one thing is certain, the rebel gentleman received a uniform which he sadly needed; and the memory of the lady is more fondly cherished by her descendants, whenever they think of the "Continental Buttons."

Moral of the Baby Show.—We, at our cattle shows, give prizes to the man who produces the best food for the people's eating.—The Americans give prizes for the mouths best adapted to eat the food which is so bountifully prepared for them on their vast continent.—The two nations typify their differences in this manner. Our great desire is to find ample food for our population. The Americans are only desirous of a large population to consume their food.—*London Times.*

AN HOUR AT THE ASSAY OFFICE.

The annexed section concludes the interesting account of a visit to the New York Assay Office, recently published in the *New York Evening Post*, and partly given heretofore to the readers of the Rural.

The Melter and Refiner takes us to his treasury vault, and the workman draw their small wagon loads of gold and silver into the melting room. The melting is now to be attended to. One hundred pounds of silver to fifty of gold is placed in each crucible, the rule being two of the former to one of the latter. After an hour and a quarter the two are rendered fluid, and the man at the furnace, with his long-handled ladle, dips out the mixed metal, and swinging round the edge of a large copper vessel, pours it into the cold water contained in it. This rotary motion has the effect of preventing the solidification in a mass of the metal, causing it to harden and sink to the bottom in the form of flakes or *grains.*—Hence it is called the process of *granulation*, and the mixed metal from the excess of silver in its composition is called *granulated silver.* It is certainly beautifully white, looking like the oxydized silver that we see among the ornaments of a jeweller's window, as indeed it is the same thing. Not only has it been melted itself, but it has facilitated the melting of the other alloys of the gold, and after drawing them out and mingling with them, has completely incrusted the pure yellow metal that is concealed in it.

If, now, we can only get rid of this incrustation of silver, we shall have the genuine, unadulterated gold, that will need but little more than pressing into bars or coining to answer the purposes of commerce, which is never sorry to witness an accession to its already enormous family of "yellow boys." To ascertain how this is accomplished, we must go up two flights of stairs higher, into the Parting Room, where the granulated silver is carried. Here we find four rows of eight porcelain pots, each with a capacity of from twenty to twenty-four gallons. They are placed in troughs of boiling salt water, and into each is turned a charge of one hundred and fifty pounds of the granulated or mixed metal, over which is poured as many pounds of nitric acid. This acid, uniting with the silver, forms a solution which is called nitrate of silver, and the effect of such an alliance is to separate and sink the pure gold to the bottom of the jar. The nitrate of silver is then drawn with a gold syphon—gold being the only metal which can withstand its action—and another charge of nitric acid is applied to complete the work. After the second charge has been in the same manner removed, we see at the bottom of the pot an unpromising sediment remaining, as black as Jersey mud. But the spectator must not be discouraged. Like a singed cat, the sediment is better than it looks—in short, it is pure yellow gold, as will be shown by washing it a few times in warm water, so as to free it from the acid that still clings to its exterior. It now appears thoroughly pulverized, and fairly entitled to the name of gold dust.

The next operation is to solidify it by subjecting it to a pressure of two hundred tons from a hydrostatic press, when it comes out in the form of cheeses about a foot in diameter, with a thickness of three inches. Then put on a furnace heated red hot so as to expel the last drop of water from it, and again melt it in a crucible, from which it must also again be moulded into bars of fine gold varying, according to their size and fineness, from $6,000 to $800 in value. These are once more assayed at the hands of the Assayer, by the process before explained, stamped to indicate their number, fineness and weight, and committed to the vault of the Treasurer, there to await his disposal. It is only such bars that are received at the banks, who are unwilling to accept those which have been assayed without the authority of the government. Their conversion into money must be done at the Mint in Philadelphia.

Our merchants also, for several reasons, prefer the gold bars to coin in making their foreign payments. In the first place, they are cheaper, as they are compelled to pay fifty cents on a hundred dollars for money, while the charge for bullion of the same value in bars is but six cents. They are, moreover, obviously more acceptable to merchants abroad than our national coin, except in those countries where coin is wanted to supply emigrants bound for our shores.

The fineness of the bars manufactured at the Assay Office, as shown by its operations on the last deposit of California gold, was 995 thousandths, a success not hitherto equalled by any other similar establishment. When first deposited with the Assayer, it ranges, on an average, from 860 to 885 thousandths of pure metal. According to the requirements of Congress, our national coin must contain ten per cent. of alloy—*i. e.*, one hundred parts out of every thousand. Fine bars, by the same rule, are required to consist of 889 thousandths of pure gold, with a permission to refine as much further as may be found possible.

But to complete our account, we should give a report of the fate of the silver, drawn off in a solution with nitric acid from the porcelain pots which we have mentioned. All we have to say is, that it is emptied into an enormous vat, capable of swimming a tolerably sized young elephant, and nearly filled with a solution of common salt. The silver is thus precipitated, that is, sunk in a solid form to the bottom, becoming what is called chloride of silver. It is then freed from the acids adhering to it, in the same manner as we have mentioned in the case of gold; reduced to metallic powder, by an immersion in vats containing sulphuric acid and zinc, washed, pressed, dried and cheesed in precisely the same way as gold, and is thus ready to be re-melted and re-employed for the purification of the more precious metal.

Such is a brief account of the processes used by the new Assay Office in performing the duties assigned by the government to it.

A CONTRAST.

Ten years ago we knew two young men who were familiarly acquainted with each other, and associates. They lived in the same place, and their earnings were nearly alike, about $100 per annum. Outside acquaintances could have detected no evident differences in their expenses. One, however, being what the world calls a clever fellow, he got into the habit of spending his leisure hours at a tavern. He sauntered into a saloon now and then, was ready for an occasional excursion, or a shooting match, or a ride. He smoked habitually, drank a little, and now and then bet a trifle.—His habits were not bad, and his character in the main unimpeached, though, somehow or other, his income, except at a slow rate, did not increase. We saw him a few weeks since, and he had not a red cent, except what he had on his back, with a small family to support.

The other pursued a different course.—Though his temperament was the most likely to tempt him into habits of idleness, he worked steadily along, dropped into no habits, though liberal enough when a rational necessity occurred for the exercise of his generosity. He loitered nowhere, felt no necessity of idling at the hotels and saloons. Somehow or other, on the principle that birds of a feather flock together, he soon had quite a different set of associates from the other. Last week we happened to meet him, and his inquiries were directed to obtaining a man to employ in a responsible place as subordinate to himself.—We recalled his old friend and recommended him. Chance made us acquainted with his worldly luck, as the superficial would term it, and we found that he had accumulated on his former and now largely increased salary, some $5,000, besides supporting a family. On our expressing gratification at the result, he desired to know if we remembered a conversation which we had with him a few years before.—We did not.

"Well," said he, "as I was riding with you on such an occasion, I expressed dissatisfaction with my income and pursuit. You showed me that by saving only $150 per annum, and the annual interest, I should be quite a wealthy man at the age of fifty, and you estimated it by approximation. It sank deeply in my mind, and I not only saved that sum, but have, at an increased salary, saved very much more, and to that conversation I owe much of my success. I always intended to remind you of it, if an opportunity occurred."

These two men are now in the same employment, one as principal and the other as a subordinate; one with double the salary of the other; one with a snug property and home, and the other with none. We yesterday met the latter, and related to him the whole interview with his friend. "I will commence tomorrow," said he, "at all hazards, and save 25 per cent. on my income."

If he does so, as he is yet a young man, he will yet be a successful and an honored one.—*Toledo Blade.*

Wit and Humor.

The Postmaster at Charleston, upon leaving office adopts the following complimentary address to the President:

I have mail'd my last letter, my duties are o'er,
I've been turn'd out of office—am P. M. no more.
The why and the wherefore you need not inquire;
I voted for Scott—Pierce bids me retire.

"No enemies to punish—no friends to reward,"
From the lips of the General not long since we heard;
Yet others with me who have shar'd in the route.
Can tell by experience how well he "turns out!"

A Fair Retort.—A correspondent of the Home Journal, in a notice of a wedding he had recently attended, gives an amusing account of the discomfiture of a beau, in an attempt to get the upper hand of a young girl, whom, from her modest, downcast eyes and unpresuming demeanor, he doubtless thought a fair butt for his shafts of wit.

"Do you know what I was thinking of all the time during the ceremony?" asked he.

"No, sir—what?"

"Why, I was blessing my stars that I was not the bridegroom."

"And I suppose the bride was doing the same thing," rejoined his fair antagonist.

Things we should Like to Know.—Whether the person who stood upon ceremony has found any falling off lately? When the man who stopped up all night is likely to take the plug out? If the invalid who was given over has been handed back again? When the philanthropist who got up a petition is likely to come down? What discount is given for cash by the party who made an allowance for another's feelings?—*Diogenes.*

It is said that one of the questions asked of a candidate for initiation into the Society of Know Nothings, is as follows:

"Will you do your utmost on all occasions to renew and perpetuate the potato rot, in order to keep the Irish out of the country?"

The candidate, if admitted, must respond, "I will."

A Southern editor apologizes for the imperfections of his paper thus:—"One of us is not worth a fig this week! He's got the *face ache* like acres of agony, and really at times could almost share the heart to do the same amount of biting which Andy Steel did at the "*black dog's tail!*" And it *is* said, that *that* were "*some biting.*"

Courting in the country is altogether a different institution from the city article. In the former place you get rosy lips, sweet cider, johnny cake, and girls made by nature; and in the latter, a collection of starched phrases, formal manners, fine silk, great jewelry, and girls got up secundem artem.

Youth's Corner.

ILLUSTRATED REBUS, NO. 51.

[Written for Moore's Rural New-Yorker.]

MISCELLANEOUS ENIGMA.

I am composed of 18 letters.
My 8, 1, 4, 16, 11, 3 is tranquil.
My 13, 7, 5, 10, 6 is very small in size.
My 14, 4, 12, 8, 9, 2 is a supplication.
My 7, 4, 9, 17, 6 is a kind of ridicule.
My 15, 14, 5, 5, 3, 4, 6 is clothing.
My 8, 14, 2, 16, 6 is of every-day use.
My 15, 9, 4, 6 denotes a robber.

My whole should be impressed on the minds of all.

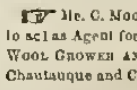
Answer to Charade in No. 50:

Both sun and moon a *shadow* make,
Which does of neither nature take,
For darkest 'tis the nearest light
And moon-made shadows oft affright;
But *shadow* might be thought begun
When yet was neither moon nor sun.
Akin to chaos—newly born
'Tis biggest—at mid-day 'tis shorn;
Longest at evening, as in the morn
All length it reaches—seldom still;
And though a point on mountain tops,
Into the deepest valleys drops,
And spreads the curtain of the hills,
The silent shadow midst the roar
Of cannon flies from shore to shore,
Follows the smoke its pall to spread
Over the dying and the dead;
Before, behind, it takes its part,
Shows every head but one true heart,
No substance having, falsely view'd
With loss of substance oft pursued,
Yet never grasped—so small, the shell
Of hazel-nut might hold it well;
So large, by mightiest hand 'tis hurl'd
Beyond the confines of the world.

TRUNKS AND VALISES.



The subscribee would inform the citizens of Rochester and the public generally, that he is manufacturing extensively, a very superior article of sole leather and steel spring Trunks, which he will guarantee to be equal to anything made in the United States.

You may see at PRITCHARD'S Trunk Depot and Sales Room, 78 State street, 1650 Trunks and Valises, and he is now adding to this large stock from 125 to 150 per week—among which you may find Trunks varying from one dollar to fifty. If you should want anything in his line, give him a call, for his motto is, "Large sales and small profits."

A. R. PRITCHARD, No. 78 State St.

Rochester, N. Y., Aug., 1854. 240-tf

☞ Mr. C. Moore, of Geneva, Chau. Co., is authorized to act as Agent for the Rural New-Yorker, and for the Wool Growers and Stock Register, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

SUBSCRIPTION—$2 a year—$1 for 6 months, in advance. For reduction to Agents, and those who form Clubs, see notice on last page.

FOR Advertising Terms, see last page.

Rural New-Yorker.

Progress and Improvement.

THE RURAL — PAST AND FUTURE.

ANOTHER Year and Volome of the RURAL NEW-YORKER terminates with the preseot number, and it becomes our duty, as its conductor, to indite a salutation appropriate to the occasion. And though we would fain accomplish the incumbent task creditably—in a manner alike pleasant and profitable to all interested—our fifth annual retrospect must occupy a space so limited as to preclude the discussion of several topics of timely importance and peculiar pertinence. Therefore, after briefly referring to the past history of this journal, we shall allude only to the more prominent and noteworthy of the many appropriate items of remark on closing one volume and preparing to commence its successor.

Imbued with an unusual amount of confidence in Mankind, and much faith in the Future—and possessing far more hope and self-reliance than pecuniary ability—we five years ago commenced this journal, with the firm determination that, extraordinaries excepted, it should MERIT, and ere long ACHIEVE, eminent success. Our earnest desire was, as stated last week, "to make the RURAL NEW-YORKER an honest, reliable and eminently useful AGRICULTURAL AND FAMILY NEWSPAPER,—correct in its teachings, of high moral tone, and entirely free from all deception and quackery, even in its advertising department." Though admonished by intelligent friends—including shrewd business men, and cautious and experienced editors and publishers—to "count the cost," and remember the sage adage that "Republics are ungrateful," we nevertheless resolved to venture our little all in what was considered a most uncertain and even hazardous enterprise. The RURAL was commenced, as it has been continued, on an expensive scale in all departments—though its expenses were then trifling compared with our present heavy disbursements. True, we started with very few subscribers, but there was abundant room for large additions on our limited subscription books, and we firmly believed they would be constantly augmenting,—an item in which we have not been disappointed. Its reception was most gratifying and encouraging, considering so many had prophesied that it would neither be appreciated nor supported. With all our confidence, however—and notwithstanding the cordial welcome of the Press, and the substantial greetings of the People—both observation and experience taught us that years must elapse before the paper could be rendered pecuniarily profitable to ourselves, though we were determined it should meantime largely benefit the community. We were therefore prepared to labor zealously and untiringly, and await the result—never for a moment doubting that, if our efforts were seconded (as they have been most nobly and abundantly) by those whose interests we sought to promote, the enterprise would eventually prove successful. Our monetary and mental means, including more energy and persistence than had previously been placed to our credit, were necessarily brought into active and almost constant requisition. As we are not, however, writing either our own or the RURAL'S autobiography, it is unnecessary to relate the incidents attending a most arduous struggle for position and permanency. Suffice it that, after months and years of patient, hopeful, persevering toil—during which period our expenditures considerably exceeded the receipts of the establishment, (for the outlays for improvements, &c., were increased in proportion to the augmented support annually accorded to the paper,)—our efforts were finally crowned with a success as positive as its achievement was gratifying to ourselves, and, we trust, beneficial to the cause of Improvement and promotive of the best interests of the Country.

But, after arduously contending against and successfully surmounting the numerous difficulties which attended the establishment of the RURAL upon a permanent basis, it was necessary to continue equal effort, and make still greater expenditures, in order not only to *sustain* the enviable position attained, but so enhance its merit as to increase its wide popularity and usefulness—as well as to keep in advance of the several able rival journals which its success had called into existence.—Hence we have continuously endeavored to improve the RURAL in all its prominent and valuable essentials—intermitting no consistent effort, or reasonable expense, to render each volume superior to its predecessor, and consequently rendering the paper more worthy its extensive and continually increasing National Circulation. We confess, however, that during the year now closing, the paper has not been so perfect and complete in either Contents or Appearance as we intended, though we trust it has proved generally acceptable, if not altogether unexceptionable. Circumstances entirely beyond our control prevented us, during a portion of the year, from devoting that constant personal labor and attention to the editorial and other departments of the paper which had previously been bestowed, and which we hope to be enabled to give hereafter.

For the large measure of support accorded to the RURAL during the year and volume which now closes, we tender the warmest acknowledgments to its numerous Subscribers, and many earnest and influential Agents, Contributors and Correspondents. Deeply sensible of our, and the community's, obligations to each and all who have in any manner contributed to the eminent prosperity of this journal, we feel more than it is proper to express—for even sincere and heartfelt language might be construed into a flattery which we would avoid under any circumstances. We have endeavored to furnish a journal worthy the exertions and influence thus bestowed. How well we have succeeded in this sincere endeavor, our readers, rather than ourselves, can best determine. Thus much of the Past.

Of the FUTURE we have little to say in this connection, our principal arrangements for the new year and volume having already been announced. We can, however, safely promise that the interest, value and usefulness of the RURAL will be fully sustained, if not materially augmented, as more talent, time and attention will be devoted to each Department,—while the arrangement and appearance of the whole will, we trust, be commensurately improved. Our corps of Editors and Contributors will be increased in number, and embrace more ability and experience than heretofore. Messrs. BIXBY and WEBSTER will continue their valuable assistance; and the Hon. T. C. PETERS, of Genesee Co., too favorably known as an able writer and extensive and experienced farmer to require an introduction at our hands, will join the office corps on the 1st of January. In addition to Messrs. T. E. WETMORE, of Michigan, and H. C. WHITE, of Erie Co., our present Corresponding Editors, we have the pleasure of announcing the assistance of Hon. T. BROOKS, Esq., President of the Wyoming Co Ag. Society, and L. WETHERELL, A. M., of Massachusetts. With such a force as associates and assistants—and the continued favors of numerous talented Contributors and Correspondents—we ought, as we intend, to make the RURAL NEW-YORKER unequalled as an Agricultural, Literary and Family Newspaper.

FARM PLANS AND RECORDS.

THAT this is a *seasonable* topic is the only excuse we need offer for following the practical suggestions of our Pennsylvania correspondent with further remarks on the same subject. It is one which has been repeatedly brought before our readers, but as yet, considering its importance, far too little action has been taken. For, (as we have urged heretofore) plans for the Future and records of the doings and occurrences of the Present, are of as high value to the Farmer as to any other class of business men. The success of Agricultural labor is as dependant on system, and a full understanding of the results which that labor may and should produce, as that of Commerce or Manufactures. And, we have sometimes thought, a higher wisdom and forethought might find full and noble employment in the study of the wide and complicated range of influences acting upon the Farm. The Merchant and Mechanic deal with dead matter and lifeless organisms, but the Farmer has to do with active existences—with living, growing, food-consuming plants and animals—demanding constant provision for their wants, and a wider range of knowledge to enable him to turn their production and activity to the truest advantage. He, if any man, should know cost and result—should keep those records which would show all this—and which would help to furnish him "facts and figures" whereon to find well-considered plans for the Future.

How many of our farming friends can today "strike a balance" for 1854, showing how the account stands between the labor and capital they employ, and the returns they have received? Those who can do so—not by guesswork, but in dollars and cents, pounds and bushels—know the profit or loss of their business for the year. They know how they stand with the world—how each plan has resulted—how crops and stock have repaid the care and labor bestowed upon them; and, not in the dark as to what pays and what does not, their future course and true policy can be understandingly defined.

The opening, or rather the close of the year, is a favorable time for the Farmer, as well as other business men, to "take an account of stock," in his case including animals, implements, &c., crops on the ground or in the barn, also everything due him, and everything he owes,—that he may have a definite stand-point, showing his present condition, and which he may compare with that of other years to prove his progress or retrogression. He and every one, young or old, who pays and receives money should keep a cash book of receipts and expenditures. In addition to this, let him debit every crop with the expenses of its production, and the same should be done with every animal or class of animals. An apparatus for weighing will be found very useful, for without it one cannot know the cost of keeping and fattening animals. One cannot decide which is the most profitable food, unless he knows its cost and the show it makes in the stable, the dairy, and the larder. But we need not proceed to further specialities; this has already been done, and experience alone can show the best mode of procedure in individual cases.

Who, let us again ask, more than the Farmer, has incentives for keeping a journal or diary of his labor and his life. To whom are the lessons of experience and observation of greater value than to him, who in the very laboratory of Nature watches her operations, and depends for wealth, comfort, and subsistence upon her workings? The daily work of the farm—the planting, culture, and gathering of its fruits, the details and results of varied experiments and observations in the different departments of Agriculture—all furnish valuable materials worthy of careful study as the ground whereon Practical Science shall plant the seed of many a golden harvest in the Future.—R.

THE beginning of a new year is an excellent time for farmers (as well as other people,) to "turn over a new leaf." After doing so, we hope many will inscribe thereon the results of their observation and experience for publication in the RURAL and other journals.

ROTATION OF CROPS.

"OF course it is *unimportant what system of rotation is adopted*, provided the land is not exhausted by too frequent repetitions, or by working it too much without proper care in dressing and manuring."—*Exchange*.

The opinion that "it is unimportant what system of rotation is adopted," however popular it may be, arises, as it appears to us, from a misconception of the fundamental principles on which the practice of a rotation of crops is based. Timothy, wheat, barley, buckwheat, oats, corn, &c., following each other, would be a rotation of crops, but who can doubt that such a course would impoverish the soil as much as though any one of these crops were grown continuously on the same land. Looking simply at the exhaustion of the elements of fertility in a soil, rotation is of no use whatever unless crops are introduced into the course which require a less quantity of certain substances as food, than the crops which precede or are to follow them. To illustrate this, suppose wheat, barley, oats, and rye, require a much larger quantity of ammonia for their growth than the atmosphere and rain can supply, while clover, peas, beans and turnips do not, it is evident that a succession of the former crops would soon exhaust the soil of ammonia, and a diminished yield of these crops would be the result. If, however, instead of having a rotation of successive cereal crop, we introduce each alternate year a crop of clover, peas, beans, or roots into the rotation, the exhaustion of ammonia would be much less speedy, and, indeed, by judiciously feeding the clover, peas, roots, &c., to stock on the farm, it may be prevented altogether.

In regard to the mineral elements of plants, too, suppose turnips, clover, peas, &c., require more available phosphoric acid in the soil than wheat, it is evident that a succession of these crops would be a very injudicious rotation and one calculated, provided they were sold off the farm, to render the soil incapable of producing a good yield of such crops. On the other hand, the same field, which after having produced a good crop of roots, has not sufficient available phosphoric acid for another crop of the same class, might, nevertheless, have enough for a large crop of wheat, &c.

It is not, therefore, "unimportant what system of rotation is adopted." It is, rather, of the greatest importance. No system of rotation is adapted to all soils and all climates, but the laws of vegetable growth on which the practice of rotation rests are the same everywhere, and are worthy of profound study.—Experience has taught English farmers that, on their light soils, in their moist climate, wheat followed by turnips, barley, clover, and wheat again, and so on, is a judicious rotation. The heavy land farmers have long discovered that beans, peas, and clover, alternately with wheat, oats, &c., is a rotation well adapted to their soils and circumstances, and true science has demonstrated that it is so in both cases. In Western New York, clover and wheat is found a good rotation.—In the Southern States the cow pea, in rotation with wheat, corn, &c., is found to be an excellent renovator of the soil. The Italian farmer advantagously introduces white lupines into his rotation. Now in all these cases the principles involved are the same and cannot be violated with impunity.

CONSISTENT CRITICISM.—The scientific editor of a *practical* hebdomadal, published way down in the "Athens of America," seems disposed to criticise our humble labors out here in the "RURAL Districts." He objects to the article entitled "Seasonable Notes," in a late number of the RURAL—saying, "He is no farmer who needs such notes." Perhaps not—but it is not a great many months or years since "such notes" were transferred from the RURAL into our critical friend's paper (under another title,) *and headed as original, credit being omitted!* Are there any glass houses around Boston?

ANALYSIS has shown that the portion of the beet not exposed to the light contains less sugar than that which is buried.

WAKEFULNESS.—CAUSE AND REMEDY.

EDITOR OF THE RURAL:—Many persons of nervous temperament,—hypochondriacs with uneasy stomachs, from the use of too much rich and highly seasoned food, knick-nacks, or tea and coffee,—the thinkers, inventors, authors, and those who have domestic or other troubles pressing on the brain; in fact all who are not of mere animal construction and of redundant health, are subject more or less to *Wakefulness* and a difficulty of obtaining that repose necessary to reinvigorate the system, after the labor and cares of the day. It becomes a disease, and sometimes as distressing as the "snakes in the boots" of the inebriate.

What is more tedious and enervating than the difficulty of procuring sleep, or of waking and waiting for the sonorous bell of the clerk of time, and after hopelessly trusting it will proclaim the approach of day, hearing him bloatly tell all he knows by striking *twelve*?—Then, the melancholy hours passed in solitude and thick-coming thoughts of real or anticipated troubles and cares, are painful in the extreme and disorder the whole vitality of the animal machine.

Many devices have been suggested to bewilder the mind and induce the lethean forgetfulness of sleep. Counting up to hundreds—multiplying two or more numbers in the mind and obtaining the result—calling over the names of acquaintances, or the counties in the State, &c. The most effective course is to jump out of bed and commence walking in the dark, exercising your judgment in avoiding and in finding objects about the room, taking no heed what the matter is; its effect is to break the chain of thought—dispel vapors—equalize the circulation and disperse the electricity of the body, which the bed, being a non-conductor, cannot do. The antagonism of the warm bed and cold air gives a shock to the nervous system, acting like a cold bath, which it is, only air instead of water. On getting into bed a pleasant glow is felt, and in nine cases out of ten, the brooding nightmare of wakefulness is driven to the land of Nod, and forgetfulness and refreshing sleep ensues.

No one can take cold when every part is equally exposed; the most delicate constitution may run naked a mile in the greatest rain or snow storm, and if they do not freeze, no ill-effects will follow. It is partial exposure that deranges the system and creates the colds, lung complaints and rheumatisms of life. Baptism by immersion is a case in point, and the thousand accidents by flood and storm; while a spoonful of water in the shoe, or damp feet, or sitting by a cracked window-light, gives a cold that costs life. The only precaution is to keep moving; exercise and motion and a will, can carry the person safely through almost any exposure.

It is a simple experiment, and the fees for advice—gratis. H. Y.

REGULARITY IN FEEDING.—It is very desirable both for the thrift of the animal and the orderly progress of the labors of the farm, that all domestic animals, as far as possible, be fed, watered, &c., at the same hour and minute every day. It has been found by experienced and intelligent herdsmen that, when thus attended to, they learn to expect their fodder at the stated time, and remain quiet and uncomplaining until that period comes around. This is true of all domestic animals, and should be heeded by the farmer. Let him so arrange his labors at the barn that every operation may be performed at a stated time, and he will find matters to go on much more comfortably and pleasantly than when all is left at hap-hazard, without system or regularity. Few things are more unpleasant to the good farmer than the complaints of hungry stock.

WINTER LABORS OF THE FARMER.—Winter is not exactly a leisure season with the farmer. The care of his domestic animals must consume a large portion of his time; and added to this, he has the preparation of his supply of fuel for the year, and the material for renewing or repairing his fences, also getting out and drawing lumber, stone, &c.—forming, in all, plenty of business for the brief and often stormy days of this season of the year.

Educational.

SCHOOL EXAMINATIONS.

The examinations of the Public Schools in this city have taken place successively in the several districts within a couple of weeks past, exhibiting a fair degree of proficiency on the part of pupils, and a laudable amount of zeal and ability on that of the teachers. It is a matter of regret, however, that a more general interest is not exhibited by the parents and guardians, and we might add, of the *tax-payers in general*, in the success of these institutions so vitally necessary to the well-being of the community. Nothing encourages a teacher more in the discharge of his onerous and responsible duties, and stimulates the pupils to so great an extent, as frequent visitations from the patrons of the school.

Business is usually so pressing, the routine of daily occupation so exacting, and the anxiety to escape poverty or to amass wealth so peremptory in its demands, that very few men are willing to spend even a day for the purpose of supervising the progress of their children in all those acquisitions which are far better, more lasting, and more beneficial both to them and their country, than all the wealth of an Astor or a Girard. Yet, acknowledging this position theoretically, men practically ignore it in all their acts. They submit to taxation for school purposes with tolerable grace, give the teacher a hearty greeting when they happen to meet him in the street, furnish their children with the necessary books, &c., and—*do nothing more.* Is this just to themselves, to the teacher, to the rising generation, and to the republic? There is something more due from all of us, than merely wishing well to future generations;—an active and positive, not a passive or negative line of conduct, is prescribed by duty to all; and the education of the children comes in for its share of the former traits in the character of every good citizen.

Last week Wednesday a public examination took place in district No. 6 in this city. The school numbers near five hundred pupils, and employs the active exertions of one male principal and five female assistants. There attended, in addition to the teachers and the Superintendent, about twenty ladies, (blessings on them for their presence,) half a dozen gentlemen who had children at school, one member of the Press for half a day, and one clergyman for half an hour; and yet, the examination was of sufficient interest to have well paid every resident of the district for the allotment of at least *one day* to that special purpose. Neither of the School Commissioners for the Ward were present. What is said of No. 6 may be said also of all the other schools in the city,—aye, and we may add, of the country too.

The places now occupied by parents will soon be in possession of their children; and if the former have really a parental solicitude for the temporal well-being of their offspring, let them by their encouraging presence second the efforts of the zealous and faithful teacher.

SUPERINTENDENT'S QUARTERLY REPORT.

The following abstract of the Quarterly Report of R. D. Jones, Esq., Superintendent of Common Schools for this city, was presented to the Board of Education at its last regular meeting:

Abstract of the report for the last quarter of last year, ending July 28, 1854:

Pupils in Attendance.—Whole number of pupils in attendance during the quarter, 5,038; number of males, 1,766; number of females 3,267; whole number that have attended during the present school year, 8,664; average daily attendance of pupils for the quarter, 2,941.

Studies Pursued.—Alphabet, 425; orthography, 4,273; history of the United States, 183; reading, 4,389; arithmetic, 2,309; geography, 1,373; English grammar, 521; penmanship, 1,595; composition, 998; philosophy, 46; physiology, 45; algebra, 222; chemistry and geology, 15; astronomy, 23; analysis, 153; vocal music, 4,252; book keeping, 41; botany, 12; drawing and mapping, 67; general history, 15; principles of our National and State Governments, 34; geometry, 39; other studies, 173.

Abstract of the reports for the first quarter of the present school year, ending Nov. 17, 1854:

Pupils in Attendance.—Whole number of pupils in attendance during the quarter, 6,104; number of males, 4,283; number of females 1,871; average daily attendance of pupils, 3,352.

Studies Pursued.—Alphabet, 467; orthography, 5,128; reading, 5,795; arithmetic, 3,168; geography, 1,905; history of the United States, 180; English grammar, 986, penmanship, 3,806; composition, 1,294; philosophy, 60; physiology, 53; algebra, 247; analysis, 241; vocal music, 5,378; book-keeping, 56; drawing and mapping, 222; general history, 29; rhetoric or logic, 4; principles of our National and State Governments, 190; geometry, 29; other studies, 216.

Of the number registered for the last quarter, 466 attend the evening schools.

The power of the press in multiplying duplicates of any work is scarcely appreciated even by those best acquainted with its operations. There were printed and mailed in the New York *Tribune* office in 30 hours, 182,400 papers.

THE FALCON.

The Falcon, a bird so distinguished and honored in the days of chivalry, has in these latter times of utilitarianism and *gunpowder*, been degraded from its honorable position on the wrist of the noble Knight and his lady-love, and betaken himself to the ignoble pursuits of stealing farmers' chickens, or watching for hours beside a ditch, waiting for an opportunity to pounce upon an unlucky mouse or frog. He is, in fact, only a hawk,—a blood-thirsty, rapacious, unscrupulous robber, the hated enemy of all the feathered tribe, and the legitimate aim of every old shot gun, in the hands of man or boy, that can be fired off without the danger of bursting. With the glory of the minstrel and the jester, that of the falcon has also departed. In the olden time a person of rank scarcely stirred out without his hawk on his hand, which in old paintings is the criterion of nobility. The expense which attended this sport was very great. Among the old Welsh princes, the king's falconer was the fourth officer in the state; but, with all his honors, he was forbidden to take more than three draughts of beer from his horn, lest he should get drunk and neglect his duty. In the reign of James the First, Sir Thomas Monson is said to have given a thousand pounds for a cast of hawks; and such was their value in general, that it was made felony in the reign of Edward the Third to steal a hawk. To take its eggs, even in a person's own grounds, was made a felony and punishable with imprisonment for a year and a day, together with a fine at the king's pleasure.

There are a great many branches of the hawk family, but like many aristocratic families among men, they have all sunk very low in public estimation, the unenviable characteristics of the tribe rendering them unfit associates in a well ordered and peaceful community. The rearing and employment of the falcon in the sports of the field was essentially an aristocratic prerogative, and could only be maintained in those times when the iron rule of despotism rendered the mass of men mere tools and machines to minister to the wants and caprices of the few. The march of civilization, and the invention of artificial means whereby the feathered tribes are made to fall before death-dealing fire-arms, have rendered the services of the falcon as useless as they certainly are cruel. Fine ladies do not now indulge in the cruel sport of sending a rapacious hawk in pursuit of a poor fugitive songster of the forest, and clap their hands over the successful seizure of the prey.

SINGULAR OPTICAL ILLUSION.

The Paris correspondent of the N. Y. Times, states that a gentleman living in Brussels, somewhat troubled by cobwebs and spots in his eyes, rubbed them one night with a few drops of extract of belladonna. In the morning the cobwebs had gone, but the whole outer face of the world had changed. His newspaper, which had been placed by his bedside, was composed of type so small that he could hardly decipher it. He rang the bell, and his stout serving wench had shrunk into a thin little girl of ten years. He got up in a great fright and looked after his clothing—they were the garments of a child, but as his own limbs had diminished in proportion, he easily got into them. He found his wife and children at the table, the former a dwarf, and the latter a row of dolls. He hurried off to his physician; the horses he met looked like dogs, and dogs like rats. Everything was Lilliput and Cinderilla. Lotions were applied to the victim's eyes, and the next day Brobdignag returned, bringing back the cobwebs and spots. This phenomenon, called *micropic*, does not seem to have occurred more than half-a-dozen times, though it may be brought on at will by the employment of certain substances.

New Copper Coin.—The new cent pieces will be issued from the Mint in the course of a few days. They are considerably smaller than the old cent pieces, and form a really beautiful and attractive copper coin. On one side is the head of Liberty, and the thirteen stars being omitted, the surface is plain and polished. The reverse is the same in design as the old cent, but brighter and much more finished.—There is a certain amount of alloy mixed with the copper, and the perfection of the die gives to the coin a finish and elegance that has never been attained in our copper coinage. The new coin will be universally welcomed as a needed and creditable improvement.—*Pennsylvanian.*

Thermometers.—In England and the United States the thermometers are mostly on Fahrenheit's scale, which makes 180° between freezing and boiling. But at the early period when the scale was formed, it was supposed that the lowest possible temperature was that produced by mixing snow and fine salt. Fahrenheit, therefore, plunged his bulb into the mixture, when the mercury sunk below the freezing point 32-180ths of the distance between that and the boiling point. This lowest point was therefore marked as zero, and beginning to count upwards from this, on a scale of equal parts, freezing became 32, and boiling one hundred and eighty higher, or 2-12

To Cure Chilblains.—Wash the feet with water, saturated with alum, and draw on a sock made of soft, fine old linen.

Shawls.—At the Bay State Mills, in Lawrence, which, next to the new Pacific, are the largest in the world, there are annually manufactured four hundred thousand shawls valued at upwards of a million and a half of dollars. Some of these shawls are designed to protect the stalwart shoulders of the sterner sex, and others resting lightly upon the shoulders of the fair. The prices of the most costly shawls, chiefly for gentlemen's wear, range as high as ten and thirteen dollars. The Bay State Mills consume forty thousand pounds of wool in a day, or upwards of twelve million a year.—The fleeces of at least three million sheep are annually required to supply their demand.—The Bay State Mills give employment to two thousand operatives, and the shawls of this, the largest manufactory of the kind in the world, are familiarly known to every housekeeper in the land.

Dr. Young.—Whipple, the lecturer, says that Dr. Young, the author of Night Thoughts, was in society a brisk, lively man; that his main theme in writing was the nothingness of wordly things, but that his favorite pursuit was rank and riches. From this and other illustrations which he cites, he concludes, that a man of letters is often a man of two natures—one a book nature, and the other a human nature: for Seneca wrote in praise of poverty on a table made of solid gold, with two millions of pounds let out at usury.—*Transcript.*

Astronomy's Conquests in 1854.—Professor Challis announces, as the conquest of Astronomy during the past year, four new planets, and the same number of new comets; none of the latter have been, as yet, identified with any of their predecessors, which unfortunately is the case with respect to the planets—the number of which, instead of being the mystic seven, bids fair to increase to seventy, equally to the inconvenience of astronomers and the juvenile students of astronomical catechisms.

The consumption of copper in the United States is put down at between 8000 and 9000 tons annually, of which only about 1800 tons are produced in the country. About 700 tons are consumed by the rolling mills, and distributed over the different markets of the Union, the remaining 1600 tons being disposed of in the manufacture of sheet brass, kettles, wire, buttons, &c. There are six copper works, containing seven rolling mills and three smelting furnaces in the States.

Though sometimes small evils, like invisible insects, inflict pain, and a single hair may stop a vast machine, yet the chief secret of comfort lies in not suffering trifles to vex one, and in prudently cultivating an undergrowth of small pleasures, since very few great ones, alas, are let on long leases.

Ladies' Department.

CONDUCTED BY A——E.

MAIDEN BEAUTY.

BY CHAS. SWAIN.

Her hand's like a lily—
But just at the tip
It hath stolen a tint,
Like the hue of her lip!
Her breath's like the morning,
When hyacinths blow:
Her feet leave a blessing
Wherever they go!

For each one she's so melting
To comfort or cheer:
When her purse fails her wishes,
She gives them a tear!
E'en the sound of her step
Seems to bring them relief;
And they bless that sweet face
Which speaks hope 'mid their grief!

Her mouth's like a rose-bud,
Just budding half-through,
When it opens at morn,
'Midst fragrance and dew.
And her heart is a dwelling
Where angels might rest:
And forget their own heaven
In that of her breast.

THE GRASS AND FLOWERS.

A lovely flower stood blooming on a bush alone. It was the admiration of all, but most, of itself. It unveiled its plaited leaves in the sun, it glittered in the dew of the morning, and breathed its fragrance upon the air.—Throned amid the fresh green leaves, which sheltered as well as ornamented it, nothing could be more charming and graceful. Every passer-by said, "Look what a beautiful flower."

Beneath this pretty and delicate creature of Providence there spreads a green meadow, here swelling into gentle undulations, and there sloping till it fringed the bank of a running stream. The flower looked down on the lowly grass, and with a sneering air, and in a haughty tone, gave utterance to her thoughts:

"Behold this insolent grass, what does it so close to me? How mean—how homely! How different in appearance and destiny from me? Never does it hear the admiring murmur which I excite. No rainbow hue spreads its plain surface. It emits no fragrant odor, but remains to be trodden under foot by all who list, unvalued and unnoticed. I should like to know for what it was created."

"Ignorant and conceited flower," replied the grass, "that question might be better asked of thyself; for thou art as useless, idle and fleeting as thou art pretty. True, the scent which rises from thy silken leaves is grateful, but where will it be to-morrow? The gleaming of thy soft colors, too, amid the verdant leaves is agreeable, but how soon will they fade on the ground?

"Evanescent child of vanity! I have witnessed the existence of a thousand such as thou, living unvalued and perishing unmourned; and dost thou sneer at me because my stem is not so slender and brittle, my blade not so fair as thine? Know that the wise regard me, even for my beauty, and more than they do thee. I spread over the earth a carpet of velvet. I clothe the uplifted hills in mantles of verdure. I furnish food to thousands of animals, who derive from me the power to gratify man with the most delicious luxuries. The wind blows over me, and hurts me not. The sunshine falls on me, and I am yet unwithered. The snows of winter cover me, and I am ready to beautify the earliest spring.—Even the steps of the many who tread upon me do not prevent my growing ever bright and cheerful; and Heaven has blessed me with a color, of all others, the most grateful to human eyes."

The saucy flower was about to reply, when a passer-by plucked it, admired its pretty hues, and threw it away.

A Hermitage.—Spenser has a pretty picture of a sylvan retreat. The last line is the perfection of melody:

A little lonely hermitage it was,
Down in a dale hard by the forest side,
Far from resort of people that did pass
In travell to and fro; a little wyde
There was a holy chapel edifyde,
Wherein the hermit dewly wont to say
His holy things each morn and eventyde;
Thereby a chrystal streame did gently play,
Which from a sacred fountain welled forth alway.

It is a glorious sight to see two old people, who have weathered the storms and basked in the sunshine of life together, go hand in hand, loving and thoughtfully, together down the gentle declivity of time, with no anger, nor jealousy, nor hatred, garnered up against each other, and looking with hope and joy to the everlasting youth of Heaven, where they two shall be one forever. That is a true marriage, for it is a marriage of spirit with spirit. Their love is woven into a woof of gold, that neither time, nor death, nor eternity can sever.

Heart Work.—We are not sent into the world to do anything into which we cannot put our hearts. We have certain work to do for our bread, and that is to be done strenuously; other work to do for our delight, and that is to be done heartily. Neither is it to be done by halves and shifts, but with a will; and what is not worth the effort is not to be done at all.

It is stated that in the palmy days of the linen manufacture, in the North of Ireland, yarn was spun so fine that twenty and sometimes thirty hanks weighed only one pound; and that a young woman in one of the counties frequently produced sixty four hanks from a pound of flax, each thread round the reel being two and a half yards long—120 threads in each cut, and 12 cuts in each hank.

Sunday Reading.

STANZAS.

How fine has the day been, how bright was the sun,
How lovely and joyful the course that he run,
Though he rose in a mist when his race he began,
And there followed some droppings of rain!
But now the fair traveler's come to the west,
His rays are all gold and his beauties are best;
He paints the sky gay as he sinks to his rest,
And foretells bright rising again.

Just such is the Christain: his course he begins,
Like the sun in a mist, when he mourns for his sins,
And melts into tears; then he breaks out and shines,
And travels his heavenly way:
But when he comes nearer to finish his race,
Like a fine setting sun, he looks richer in grace,
And gives a sure hope at the end of his days,
Of rising in brighter array. —*Watts.*

PLACES OF WORSHIP.

It is all right and proper that settled and wealthy communities should rear splendid and costly churches in which to worship. Whatever men may say in opposition to display in the erection and decoration of temples dedicated to the service of the Most High, few will gainsay the fact that little honor is done to religion by that community which is noted for elegant private buildings and luxurious living, while at the same time the accommodations for public worship are narrow, parsimonious, and mean.

In new countries, church accommodations must of necessity be limited in extent and humble in character; the log school-house not unfrequently being appropriated on the Sabbath to purposes consonant with the sacred day. Who can doubt that the lessons of instruction thus delivered have been as fruitful of good as if heralded from the pulpit of Trinity church? that the familiar hymn sung by the unsophisticated choir of youth and maidens, and the humble prayer offered up in sincerity of heart by the gray-haired but unlettered patriarch and pioneer, have been as acceptable to God as the paid singing and organ strains, echoing through fretted columns and vaulted roof, and the set prayer read in formal, unappreciative tone from the gilt edged, printed page?

The great temple of Nature, with the blue sky for a canopy, has time and again been selected as the place most fitting for public worship, and many of the most impassioned and thrilling discourses ever preached,—among which may be mentioned Christ's Sermon on the Mount,—have been uttered there.

How many of our readers are there who have reached the meridian of life, that have not received a large portion of the religious instruction of their youth in a school-house, or under the humble roofs of private individuals, dedicated for the time being to the use of the church? The broad field of a new country is always open to an earnest evangelist, and thankful may he be if even a log school-house can be found to afford a place of worship during inclement seasons. There is always abundant opportunity to do good in such localities, broad fields ready for the harvest and few reapers. As the venerable Dr. Lyman Beecher once said in the hearing of the writer to a theological student who asked if the Dr. knew of a good place for him out west.—"Place—place? It's all place!"

As a country grows old, fine church edifices supersede the simple original structures; but whether the piety and Christian virtues of the worshippers proportionately increase, is a proposition that admits of a much greater amount of doubt.

Mohammedans.—Perhaps no class of men has been more widely considered inaccessible to the influences of the Gospel than the followers of Mohammed; and it would seem, in the light of their past history and present degradation, nearly impossible to reach them by such appliances as have proved effectual to the conversion of thousands of benighted Pagans; yet it is certain that encouraging movements are making even among *them*, and that some are seeking after the New Testament, reading it with interest, and going so far as to declare their faith in Christ as the only and all-sufficient Saviour from sin; few indeed have dared yet to come out boldly on the side of truth—but these few are scattered over the country, and may prove the germs of an awakening among their brethren as extensive, ere long, as that existing among the Armenians in their midst.

"Practical Religion."—George Beach, of Hartford, Ct., has erected a fine brick building in that city, comprising twelve comfortable tenements, which he designates "House for Widows," being intended for the comfort and accommodation of women who have been deprived of the means of support by loss of husbands, &c. This building he has put in the hands of trustees for that purpose—merely requiring of each tenant the nominal sum of $10 a year, which is to pay repairs, insurance and taxes. It is already filled with that class of persons, and Mr. Beach is receiving, in the blessings of the widow and fatherless, a greater happiness than is derived from fat dividends. —*Congregationalist.*

The religious census of England gives 239 Unitarian congregations, with 29,612 hearers—about 120 each.

ROCHESTER, DECEMBER 30, 1854.

SPECIAL NOTICES.—TO AGENTS, &C.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THOSE who are furnishing clubs, (20 to 60 copies,) can recol on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ IN remitting for clubs, please read Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ IN writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County and State. Write all names plainly.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ THE lowest club price of papers delivered at publication office, is $1,50 per copy. Hereafter, $2,50 will be charged per copy, when left at residence by city carrier.

☞ WESTERN MONEY is at present almost unsaleable in this city, and we therefore request Western friends and agents to remit Eastern money—or drafts on Buffalo or New York, less the cost of exchange.

☞ A LIBERAL OFFER.—We will send the RURAL one year, and a yearly copy of either of the $3 Magazines, for $4;—and the RURAL and either of the $2 Magazines, for $3. This firm will answer several inquries, and perhaps benefit others.

☞ SPECIMEN numbers of the RURAL cheerfully forwarded to all disposed to aid in augmenting its circulation. We will send to your own, or the address of friends, all the necessary documents—extra numbers, show bills, prospectuses, &c. It will afford us pleasure to respond to all requests in this line.

Concluding Paragraphs.

As we anticipate visiting the great majority of our readers with little or no interruption—for we trust an invitation to continue the RURAL will be promptly extended by all who have not already renewed their subscriptions—we shall not, in adding "Finis" to this volume, offer a final Farewell to any of its friends. On the contrary, we feel disposed to wish each and all a "Happy New Year"—and, in addition to the mere compliments of the season, to congratulate all upon the large measure of Peace, Prosperity and Happiness vouchsafed to the American People and Nation—to Individuals and Communities throughout our extensive and rapidly improving Country. Our sincere aspirations, and humble yet earnest labors, shall not be wanting to aid, however feebly, in continuing and enhancing the Prosperity and Advancement of the Republic. And, reader, if "you and I and all of us" properly discharge our duty, the influence for good thus exercised will redound to the lasting welfare of millions. Is there not "food for thought," aye, and action also, in this reflection?

ONE DOLLAR cannot purchase the RURAL for one year, nor $100 a hundred copies, and those who write us under any such supposition waste time and stationery. People who write long, flattering epistles, or curt ones referring to prices of "other papers," are referred to our terms,—with the assurance that (aside from the fact that we cannot afford the RURAL for $1,) we do not consider it honest nor honorable to adhere to a rule in one instance and deviate therefrom in another.

BACK VOLUMES.—We cannot furnish back volumes of the RURAL, or either of them. Of the present volume, however, we shall be able to furnish files complete, either bound or in numbers as preferred, as early as the 10th proximo. Price, handsomely and substantially bound, $3; in numbers, $2. Those who wish to procure bound volumes should speak early as we shall have but few copies not already engaged or intended for premiums.

SUBSCRIBE EARLY!—Those who desire to secure the early numbers of our next volume, should renew or subscribe without delay. As we wish to be on the safe side, we shall not probably commence with an edition of over 40,000, and when that is exhausted, cannot furnish early numbers to new subscribers.—Hence, the only way to be sure of the *complete volume* is to SUBSCRIBE NOW. "A word," &c.

INCOMPLETE as is our present number in some respects—consequent upon giving Title Page and Index to the volume—it will be found to comprise quite a variety. A number of excellent articles from Contributors and Correspondents, as well as several inquiries, etc., are awaiting insertion and attention. They will keep, and appear all the better in new type and appropriate accompaniments.

THE TRANS-ATLANTIC EPISTLES of our gifted contributor, BINNIN, will be continued. We are confident this announcement will gratify thousands,—for the piquant and interesting letters have been accorded high praise by troops of delighted readers. We have other choice things in store for the Literary as well as the Practical Departments.

THANKS to friends all over the country for the numerous lengthy lists of subscribers we are daily receiving. The receipts during the past week, and present prospects, indicate an unexpectedly large increase of subscribers in all sections where the RURAL circulates.

Congressional.

SENATE.—During the week, up to Dec. 22d, bills were introduced for the improvement of Lakes and Harbors and for the completion of the breakwaters at Lake Champlain. Mr. Sumner offered a resolution directing the Committee on Foreign Affairs to consider the expediency of extending the mediation of the United States to the Governments of Great Britain, France, Turkey and Russia, in the hope of settling the existing difficulties. Mr. Petit made a report from the Judiciary Committee in favor of the House bill concerning U. S. lands in Cincinnati, and it was passed. Mr. Shields reported a bill to increase the efficacy of the army, and said he would call it up at an early date.

The bills to establish a court for the investigation of claims, for the relief of the heir of Dr. Kalb, and for establishing the department of law in place of the Attorney Generalship, were taken up and debated.

A message was received from the President transmitting correspondence with our Minister at Constantinople. Mr. Fish presented a petition from merchants in New York, asking for aid to send an expedition to the Northern Seas in search of the Kane party. Colonel Stepton was confirmed as Governor of Utah Territory, upon the assurance that he would resign his commission in the army.

The Senate met on Friday, but did no business, and adjourned to Tuesday.

HOUSE.—The President laid before the House the correspondence between the Secretary of State and the Government of the Netherland, relative to Capt. Gibsons' case. Mr. Fuller, from the Committee of Commerce, offered a resolution directing the President to open a correspondence with the British Government, with a view to erecting a light house at Cape Race—the U. S. Government sharing in the expense. Passed.

Bills were introduced for the construction of six sloops-of-war, for regulating the grades of saffrage in the Territories of the United States, and for the completion of the public works in Wisconsin. A bill making appropriation for the Indian department, and another for the support of the Military Academy, were referred to the Committee on Finance. The bill making appropriations for the Post Office Department and Ocean Mail service for the year ending June 30, 1856, was reported and referred to the Committee on the Whole.

Bills were reported from the Committee of Ways and Means, making appropriations for the naval service for the year ending June, 1856, and for making appropriations for fortifications and other works of defence, and repair of barracks and quarters for a like period.—Both bills referred to Committee of the Whole.

The bill authorizing the corporation of Georgetown to impose certain special taxes, the bill re-organizing the Courts in the District of Columbia, and reforming and improving the laws thereof, and the Military Academy and Indian Appropriation bills, were passed. The House adjourned on Friday over to Tuesday.

The Rural as a Present.

THE RURAL for a year is not a bad present to relative or friend. Hundreds of our subscribers, here and elsewhere, send it annually to sons, brothers, sisters, and other distant connexions and friends,—by whom we trust the weekly remembrancer is gladly welcomed. Each of a number of friends send from three to ten copies thus, considering the RURAL a most appropriate and valuable token to those who have removed to distant sections of the Union. Subscribers in Western New York order it sent to friends in the East, West and South—and thus not only benefit individuals, but thereby introduce the paper to notice and support in localities where it was previously unknown. Hence, whenever the paper is sent *as a present*, we never charge over $1,50 a year,—and when it is sent by the getter up or member of a club, only the club price is asked, no matter where the paper is forwarded, (unless sent to a foreign country, and then only the American postage is added.) Those who wish to make absent friends an acceptable and valuable gift, and at the same time extend the sphere and usefulness of the RURAL, will please note this paragraph.

RAILROADS.—The *Albany Evening Journal* says:—"The State of Vermont is intersected by 490 miles of railroad, which have probably cost up to the present time $24,000,000, or $50,000 a mile. Their construction has doubled within the last ten years the value of the taxable property of the State. Their capital was mostly supplied by Boston." And the *Journal* might have added with equal propriety, that after the mortgage bonds and floating debts of those railroad companies are paid, there is not *a mile of Vermont railroad*, the capital stock of which is intrinsically worth one solitary cent. Stock jobbers and speculators, by the game of bulls and bears, manage to buy and sell it at the nominal value of a few dollars, but it has constantly depreciated, and will continue to do so until no man can be found so poor as to accept it as a gift. Ten thousand shares would not keep a beggar a day from starvation.

Our next number may be delayed a day or two,—in consequence of necessary change of type, &c., and the starting of a new steam engine to work the large press upon which the RURAL is to be printed hereafter. We shall endeavor, however, to print and mail the number as early as the day of its date.

Foreign News.

THE Royal Mail Steamer American arrived at Halifax Dec. 23d, and the United States steamer Washington at New York on the 24th, bringing ten days later news from Europe. There is nothing from the seat of war of any interest to our readers. Sebastopol still holds out, and no engagement of importance has taken place since the desperate battle of Inkerman. Both parties seem to have been partially paralized by the results of the fight, and are pausing to take breath and await recruits. No battle will occupy a more bloody page in the history of modern warfare than that of Inkerman. The Russians showed themselves brave and determined soldiers, but nothing human could withstand the charge of British bayonets.

Although nothing has occurred of special interest in the field, diplomacy seems to be busy and presents the same ambignous and lying face as ever, trusted by no one and suspected by all. Count NESSELRODE has published a letter defining the four terms on which Russia will accept peace, viz: A joint protectorate of the five powers over the Christians in Turkey. A like protectorate over the Principalities, subject to the existing Russian treaties. The revision of the treaty of 1841, to which Russia will assent if the Sultan will; and the free navigation of the Danube. The Allies now refuse to recognise these points as a basis of negotiation.

A treaty of alliance between Austria, France and England was signed at Vienna on the 2d inst, binding, it is supposed, Austria to declare war against Russia within one month, and England and France to guarantee Austria against invasion or insurrection. Austria calls on the Germanic States to support her with Federal troops, but Russian influences are at work in opposition to this. Commercial letters assert that Austria entered into the treaty unwillingly, but consented to it in preference to breaking entirely with the Western Powers.

The course of Austria is attainted with great suspicion of bad faith, and she is suspected to be speaking fair to the Western Powers while at the same time she is playing into the hands of Russia. The move of the Vienna cabinet is in fact suspected to be nothing more than a seeming and partial adherence to the Western policy, its sole object being to lull into further delay those powers which have begun to talk of Poland and Polish resurrection.

LIVERPOOL MARKETS.—The market for breadstuffs had undergone little variation, and the demand was quite moderate. Provisions—no change.

Lake Disaster.

THE propeller Westmoreland sunk near the Manitou Islands, Lake Michigan, on the 7th inst., and sixteen of the thirty-three persons on board are reported lost. The propeller was laden with 29,000 bushels of oats, 90 bales of wool, 1,400 barrels of flour, 50 kegs of butter, 150 quarters of beef, 200 dressed hogs, &c. The vessel sprung a leak in a storm, and the water gained on the pumps so fast as to put out the engine fires, after having got in sight of the South Manitou Light House. She then drifted out to sea and sunk three miles from shore in thirty fathoms of water. Two life-boats with their crews reached the shore, but the third was upset and all on board were drowned. The survivors built a cabin in the woods, and remained several days, after which two parties of three each walked ninety miles to Manitous; and the remainder, two of them women, were making preparations immediately to follow.

Arrival of the George Law.

THE steamship George Law arrived at New York Dec. 16, with California mails to the 1st inst., $1,461,000 in specie, and 224 passengers. The news from California is of an unimportant local character. The miners are sadly in want of water. Business is dull, and prices, if anything, rather easier.

Grain was rather dull. Gallego and Haxall flour sold at $12 75. Mess beef $22 50. Mess pork $19@10; clear do., $24. Lard 17½c.

Seventy thousand dollars of the treasure lost on the steamer Yankee Blade, had been recovered by divers.

A moose lump of gold was taken out by a company of four men, in Calaveras co., weighing 160½ pounds, valued at $38,915. Platinum is being found in considerable quantities on the north fork of Trinity River, and is attracting much attention.

Advices from Portland, Oregon, of Nov. 21st state that a telegraph line is about to be constructed from that place to Salem; and eventually to California. We have dates from Valparaiso to the 15th, Callao 25th, and Guayaquill to the 30th of Nov. The news is wholly unimportant.

Parties of Americans were returning from the River Amazon in great distress, and all concur in stating that the reports of gold, &c., were without foundation.

We have Sidney dates to Sept. 29th, but the papers contain no news. Business was very dull,—gold arriving plentifully, and selling four pounds per oz.

NO SINECURE.—Lord John Russell recently stated before a Parliamentary Committee on Salaries, that he never owed a shilling until he became a Premier. The necessity, in England, of keeping up a certain state, of giving political entertainments, and of not being shabbier than a man's colleagues, compels a cabinet minister to spend every fraction of his salary, and often a good deal more.

THE *Pendulum* is the title of a "Jersey" paper just received at the RURAL office. We presume it goes *on tick*, and therefore that it will soon "run down," unless "wound up" in a *time*-ly manner—on the cash plan. For particulars, inquire of people who publish papers on the credit system.

News Brevities.

—— Aaron Abbott, a revolutionary soldier, died at New Canaan on the 9th inst., aged 96.

—— The First Baptist Church, in Hartford, Connecticut, has been sold to an importing house for $28,000.

—— The New York association for the benefit of colored orphans in that city, have expended in charity during the past year $15,356.

—— A convict in the Ohio State prison by the name of Newson, a very large and muscular man, chopped off three of his fingers to avoid work.

—— Four millions of Minie rifle ball cartridges were lately forwarded from the Royal Arsenal at Woolwich, England, for use in the Crimea.

—— The navy of England exceeds by several vessels and by nearly 2,000 guns, the combined navies of France, Holland, Russia and the United States.

—— A new pistol has been patented, by Messrs. Peak & Grilles, of New Haven, Conn., which discharges twenty-one shots in the same time Colt's can six.

—— Mr. William A. D. Pace, a printer, well-known to his fellow craftsmen throughout the Union, as the swiftest type-setter in America, died recently at New Orleans, aged 29.

—— The managers of the Great Western Railway, are engaged in settling with the wounded survivors of the late awful collision near Chatham, C. W.

—— The Cleveland Herald is informed that more freight has accumulated at Toledo than the railroad from thence to Buffalo can transport during the whole winter.

—— In a short time the bellows of the great organ in Tremont Temple, Boston, it is stated, will be worked by steam. The engine and shafting are already set up.

—— The work on the machinery of the U. S steamers has been vigorously commenced at West Point, Philadelphia, and the Washington Navy Yard, and is pushed with energy.

—— The Glasgow (Mo.) Times says that one hundred persons left Saline county (Mo.) for Kansas, and were in the territory "in time to look after the election of Delegate to Congress."

☞ IN addition to the thirty-three hundred dollar verdict obtained by Mrs. Smith against the City of Lowell, at the late term of the Supreme Court at Cambridge, John Lynch recovered another for $2,000 for the loss of an eye, which was occasioned by a pile of rubbish that had been permitted to obstruct the street for a long time.

☞ Lieut. Maury, of the National Observatory, proposes that there shall be two tracks used by ships crossing the ocean; those going from this country to Europe to use one track and those coming from there another track.—This, he thinks, would lessen the probabilities of collision.

☞ A locomotive attached to a passenger train exploded near West Lebanon, N. H., December 19. The engine was blown to atoms, and the engineer and fireman were badly injured. The explosion shook buildings half a mile distant.

☞ Minnesota is about four times as large as the State of Ohio, comprising an area of about 166,000 square miles, or 105,000,000 acres of land, the most of which is fine rolling prairies of rich land, a sandy loam adapted to the short summers of the climate.

☞ The matron of the Cincinnati Orphan's Home found a burglar in the house a few nights since. She fired a pistol at him, and hit him; but he was carried off by some of his accomplices, leaving a stream of blood behind him.

☞ The amount to be levied by tax in the city of New York for its municipal government, for the next year, exceeds $13,000,000, a sum which was sufficient for the support of the General Government twenty years ago.

☞ An improvement in telegraphing apparatus has been invented at Munich, by which six hundred words can be transmitted in a minute, without any particular ability on the part of the operator.

☞ The work on the Washington monument is suspended. A letter writer says it is found perfectly impracticable to carry on the work by private subscription, and if this great national design is carried out, Congress must do it.

☞ The cartmen of New York have held a meeting to procure the repeal of the law that has existed since the reign of Queen Anne, requiring them to reside on Manhattan Island. There are 10,000 in the city.

☞ Jenny Lind's net avails of ninety-five concerts given by her in this country were $116,675.09. Barnum's gross receipts, after paying Jenny Lind, were $535,486.25, making the total receipts $713,161.34.

Market Intelligence, &c.

ROCHESTER, Dec. 27.—There is no change to market prices during the week, except that the price of poultry was somewhat enhanced by the active demand for the holidays. Flour may be quoted at $10,50@75. Wheat $2,-31. Pork $5,50@6,00, and other things in proportion.

The George Law arrived at New York Dec. 29th, having on board $1,464,000. Very little specie is moving abroad, but still the New York banks do not increase their specie deposits, in consequence of the drain upon them from the West and other home localities. The money market continues tight.

NEW YORK, Dec. 23.—Flour, sales at $8,50@8,87½ for com. to good State, $8,87½@9 for choice and fair State, $9@9,50 for com. to good Ohio and Mich. ind. and Wis., $9,62½@$11 for extra Ohio, $9,50@$10,12½ for do. Mich. and $10,87½@$12 for do. Genesee. Canadian $10@10,25.

GRAIN—Fair white Genesee $2,48@2,49, good Canadian to load at $2,02¾. Rye $1,40@1,44. Corn 93c@$1 for Western mixed, $1 for new South yellow, and 99@$1 for do. white South, round yellow is held at $1,01@1,02. Oats 55@57 for State and Western.

PROVISIONS—Pork, $12,12½@12,25 for prime. Lard, 10@10¼c. Butter, 6@30 for Ohio and 20@25 for State. Cheese, 10@11¼c.

ALBANY, Dec. 22.—Flour, 8,25@9,25 for com. to good State; $9,25@10,25 for com. to good Mich. and Ohio, $10,-26@11 for extra Ohio, and $10,50@11,50 extra Genesee.—Buckwheat flour $4 25. Wheat, white Mich. $2,35, red Upper Lake $1,77. Barley Malt $1,45. Dressed Hogs $6,50.

THE CATTLE MARKETS.

NEW YORK, Dec. 21.—Beef Cattle, lot quality brought $9,50 to $10; 2d, $8,50@9; common, $7,50@8. Cows and Calves, $30@45, $55@75. Veal Calves, 4½@6c; extra, 7c. Sheep $3@4,50; extra, $5@8. Lambs, $2,50@3,50 to $5. Swine, 4½@5c.

CAMBRIDGE, Dec. 21.—Market Beef extra, $8@8,50; 1st quality, $7,50; 2d, $7@7,25, Barrelling Cattle, $6,50@$7,50, Cows and Calves, $23@50; Yearlings, $10@12; Two year old, $14@23; Three years old, $23@$45. Sheep and Lambs by lot, $3@$4. Swine, $5@5,50.

THE RURAL FOR 1855.

HAVING nearly completed our arrangements, we can safely announce that the Sixth Volume of the RURAL NEW-YORKER will, extraordinaries excepted, *far surpass* either of its predecessors, in both CONTENTS AND APPEARANCE. To redeem this pledge, no reasonable effort or expense will be wanting, for we are determined to render the paper more and more worthy its extensive *National Circulation*. In a word,—while we gladly extend the hand of fellowship to our contemporaries, for there is room for all,—we shall strive to make the RURAL by far the best Agricultural, Literary and Family Newspaper published.—Thus believing and intending, we frankly ask the kind offices of each and every reader who can consistently lend a portion of influence in support of this publication. Please read the annexed announcements.

OVER $700 IN CASH PREMIUMS!

Post-Masters, Agents, Subscribers,

And others who wish to benefit themselves, and promote the interests of community, are respectfully invited to note a brief announcement,—one which is, we confidently believe, most worthy their best attention. After bending low in grateful acknowledgment to Post-Masters, their Assistants, Agents and Subscribers, whose exercise of influence has enabled us to render MOORE'S RURAL NEW YORKER the *first* Journal of its class in Circulation, Influence and Popularity, we desire to communicate, in a few words, the substance of a PRIZE LIST which *far exceeds*, in both *numbers* and *value*, any of its predecessors. Relying upon *acts* rather than *words*, we proceed without circumlocution or palaver, to invite your attention to the following splendid list of OVER

$700 IN CASH

PREMIUMS FOR SUBSCRIBERS:

ONE HUNDRED DOLLARS for the largest list of Yearly Subscribers to the RURAL NEW-YORKER—the payment to be remitted according to our Club terms, previous to the 1st day of February, 1855.

EIGHTY DOLLARS for the next (second) largest list, as above specified.

SEVENTY DOLLARS for the third list.
SIXTY DOLLARS for the fourth list.
FIFTY DOLLARS for the fifth list.
FORTY DOLLARS for the sixth list.
THIRTY DOLLARS for the seventh list.
TWENTY-FIVE DOLLARS for the eighth list.
TWENTY DOLLARS for the ninth list.
TEN DOLLARS to EACH of the *five* persons sending the 10th, 11th, 12th, 13th, and 14th lists, as above.
FIVE DOLLARS to EACH of the *five* persons sending the 15th, 16th, 17th, 18th, and 19th lists.
THREE DOLLARS to EACH of the *six* persons sending the 20th, 21st, 22d, 23d, 24th, and 25th lists.

☞ We also offer the following very liberal list of

SPECIFIC PREMIUMS.

IN ORDER TO REWARD EVERY PERSON who may aid in extending the circulation of the RURAL NEW-YORKER, we offer to each as do not compete for any of the preceding Premiums, the following liberal gratuities for subscribers forwarded *previous to the 1st of April*, 1855:

THREE DOLLARS, IN BOOKS, or a handsomely bound volume of the RURAL for 1854, for THIRTY subscribers.

To every one remitting for twenty copies ($25,) an extra copy of the RURAL and either volume of the WOOL GROWER AND STOCK REGISTER—or, THE HORTICULTURIST for 1855.

The same premium to every one remitting for FIFTEEN copies, ($20,)—for TEN copies ($16.)

To every one remitting for six copies ($10,) an extra copy of the RURAL, or the HORTICULTURIST for 1855.

FOR $5 we will send THREE copies of the RURAL, and either vol. of the WOOL GROWER AND STOCK REGISTER.

For $4 we will send one copy of the RURAL, and either *Putnam's, Harper's, the Knickerbocker, Lady's Book*, or *Graham's Magazine* for one year.

For $3, we will send a copy each of the RURAL and the HORTICULTURIST for 1855.

$300 MORE!

As a further inducement to the friends and Agents of the RURAL, we make the following liberal offer *in addition* to above Premiums:

To EACH of the one *hundred persons* who shall send us after this date, (Dec. 15,) the first clubs of TEN or more subscribers, accompanied with the money according to terms, we will give a handsomely bound volume of the RURAL NEW-YORKER for 1854—the cash price of which is $3, and which will sell for that in almost any locality.—To those who cannot conveniently get the bound volume—as it will have to be called for or sent by Express, or otherwise outside the mail—we will give the RURAL volume unbound, and the sixth and seventh volumes of the WOOL GROWER AND STOCK REGISTER. ☞ Remember that this offer is *in addition to all other Premiums!*

All competitors for premiums are expected to adhere strictly to the following

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR. *Three Copies, one year, $5—Six Copies for $10—Ten copies for $16—Fifteen Copies for $20—Twenty Copies for $25, and any additional number at the same rate.* ☞ *As we are obliged to pre-pay American postage, our lowest Club price to Canadian subscribers is $1,50 per copy.* ☞ *To facilitate mailing, we prefer sending Club papers to one address at each post office, but the names of subscribers will be written as the papers if desired. Club papers sent to different post offices, can never be sent to at different times. Bills of all specie paying Banks received at par on subscription.*

D. D. T. MOORE,
Rochester, N. Y.

Oct., 1854.

We have so frequently commended the *Rural New-Yorker* that an attempt to add thereto would be like "tending perfume to the rose." In our opinion it is the best Agricultural, Literary and Family paper extant.—*Pa. Herald & Whig.*

The best Family Newspaper we know of, for the country, as it is devoted to Agriculture and Education, together with Literary and Miscellaneous reading. It is ably conducted and neatly printed, and will give satisfaction, we are confident.—*Elkhart (Ind.) Journal.*

The RURAL is one of the best Agricultural publications in the world, and deserving the wide and increasing patronage it receives.—*Cayuga Chief.*

Moore's Rural New-Yorker is a capital paper. It is published at Rochester, one of the most beautiful cities in the country, is printed well, is judicious in the extracts and subjects for editorials, and opens rich, like a honey comb,—having sweets in every cell.—*New England Farmer.*

We think it a model paper for the farmer's family, and of a kind much more likely to be patronized, than those purely agricultural. If we were to start a periodical again, it would be in imitation of the Rural New-Yorker.—*Am. Agriculturist.*

It is a paper that we delight to praise—and should be in the hands of every citizen farmer. No better thing, in tone and various interest, meets our eye. To farmers it is almost indispensable.—*Youngsville (Pa.) Express.*

Poetical.

THE RURAL.

When wintry winds are sweeping by
And Farmers round the ingle lie,
What paper most delights the eye
And dissipates dull ennui?
The Rural.

When Nature has withdrawn her smile,
And tears usurped its place awhile,
From whence the solace free from guile
That soon the heart doth reconcile?
The Rural.

When merry Holidays are here—
That joyous season of the year,
Of pastimes, sports and hearty cheer—
What adds its mite for readers dear?
The Rural.

When jests and riddles pass around,
And young and old with mirth abound,
Where can amusements rare be found,
What page Enigmas dark expound?
The Rural.

When clouded o'er the brow with care,
And gloomy shadows hover there,
What soothes and softens dark despair
And brightens Home with cheerful air?
The Rural.

What speaks alike to grave and gay,
In sober prose and merry lay—
Warns Youth from Vision ne'er to stray,
But ever walk in Wisdom's way?
The Rural.

What seeks to counsel all aright,
Gives Truth and Justice special might,
Applauds and honors schemes upright?
But o'er deception casts a blight?
The Rural.

When spring returns with vernal show'rs,
And maidens sigh for vine-clad bow'rs,
What whispers then, "Improve life's hours,
And learn to cultivate sweet flow'rs?"
The Rural.

When seed-time comes, with busy round
Of sowing grain and tilling ground,
What gives advice with logic sound,
And tells of Implements renown'd?
The Rural.

What has for all its chosen theme,
Domestic peace and lover's dream,
Makes Matron's duties lightsome seem,
Contentment o'er the hearth-stone beam?
The Rural.

Long may the "Model Paper" reign!
Its noble standard e'er maintain—
Successful be its next campaign,
And may all friends at Worth sustain
The Rural.

Rochester, Dec., 1853. AZILE.

Rural Sketch Book.

WON AND LOST.

"Look—there goes George Alcott, striding along like a pair of stilts; his arms, as usual swinging up and down, as those of a windmill," said Kate Edmunds, as she sat at the window with her eldest sister.

Agnes was the very opposite of the witty Kate, and she could scarcely comprehend how her sister could speak thus; for she knew Kate loved George Alcott, if she loved any one. But Kate had a reputation for wit, which she had won by saying sarcastic things of her acquaintance; and moreover, she enjoyed a secret pleasure in concealing her real opinions. To use her own phrase, "it was nice to quiz folks!"

"How can you speak thus?" said her sister; "Mr. Alcott, though tall, is not ungraceful, and, I'm afraid, if you were to criticise him, even your immaculate self would suffer."

"He dare not try it," said Kate, pouting her pretty lip.

"He would not," replied Agnes with emphasis. "Really, dear Kate, you do yourself injustice by the sarcastic things you say; people think you much worse tempered than you are——"

"And what if they do? I'm sure I am perfectly indifferent to their opinion."

"So you may be now, but you'll find by and by, that these opinions have value. Besides you do not usually mean what you say. I know that George Alcott is your favorite—nay! you cannot deceive me—you need not pout and shake your head——"

"Well, then—what if he is? Does not that give an especial right to abuse him? It is one of the privileges of our sex to make fun of those we like best."

"Ah! Kate, that is a fatal apprehension.—If you would think twice you would see how foolish a thing you had said; for if you abuse him before those who know your real opinion, they will laugh at your vain attempt to blind them, while if you make fun of him before strangers, you lower him in their estimation."

"Pshaw! Now you would play the logician," said Kate, jumping up and running to the door. "You know, sister mine, when you begin to lecture, I begin to move—so good bye, my dear little preacher," and with these words the gay girl skipped down the entry.

Kate was always the careless, rattling creature we have described her. Gifted with high animated spirits, a good heart, warm impulses, and considerable brilliancy of mind, she might have made an almost faultless being, but for the unhappy faculty she had imbibed, of turning into ridicule every person and thing she met with. Scarcely the members of her own family escaped her witty tongue. We have seen that even her favored lover suffered under its lash. Indeed, as if to take revenge for having lost her heart, Kate was especially severe on him who had won it. The fact is, she was so fond of mystifying—or quizzing, as she called it—that she made it a point to say things of George which no lady could be suspected of saying against the man she loved.

"Dear Kate," said Agnes again to her, a few days after the preceding conversation, "you really must curb your propensity to satire. Did you notice how George colored, last evening, when you made such fun of him to his face; and after his back was turned, you said things of him that will certainly offend him, if they ever come to his ears."

"Let him get offended then," said Kate, tossing her head. "He is too sensitive and ought to be cured."

"Yet you would not cure a flesh wound by irritating it where most sensitive, would you?"

"Oh! logic again. Why, really, sis, you are quite an Aristotle. But you ought to know by this time, that I'm a true woman and can't be reasoned with:

'If she will, she will,
You may depend on't,
If she won't, she won't—
And there's an end on't!'

So, my sweet sister, keep your syllogisms for some one else, and leave me to abuse George Alcott; otherwise, I shall take to quizzing you, and everybody else, most unmercifully. The fact is, he serves as a sort of safety valve to me; as long as I can have him to ridicule, you are all safe—but, forbid this, and there will be a general explosion in which every one will suffer."

Kate accordingly went on as she had begun. She was beautiful and accomplished, and had flatterers without number, so that she could do many things with impunity that would not have been overlooked in girls less admired.—She deceived many as to her true sentiment for George Alcott. Her lover cared little for this; but he really was annoyed at the severe things, which often came to his ears as having been said of him by Kate. He was too proud to remonstrate, but he showed by his manner how much he was hurt. At such times, by a few concessions, Kate would restore him to good humor; but, perhaps, on the very next day, she would commit her old fault again.

"Ah! Kate, you are found out at last, sly as you have been," said one of her companions to her. "You are engaged to George Alcott—you needn't curl your lip, for you can't deceive me any longer—I had it from his own sister."

Now if there was any one whom Kate wished to conceal her engagement from, it was this gossiping girl, who had often annoyed her excessively by trying to pry into her affairs. She knew if Caroline Wharton once became acquainted with her engagement, the news would be a common topic everywhere before night. Thinking only of this, Kate, without exactly denying her engagement, began to ridicule George Alcott, and did it so bitterly and effectually that Miss Wharton was convinced she had been misinformed.

"I know it is not true," said the gossip, on that very evening, in a large circle of listeners. "You should have heard what fun Kate made of George Alcott, how she mimicked his voice, and quizzed his bow, and imitated his way of shutting his eyes, just like a mole, as she said—you know he is short-sighted. And now only think that thisvery morning, Mr. Alcott's own sister told me they were engaged—how could she be so regardless of the truth?—but then, you know, the Alcotts would give all their little fingers to bring about the match."

Just at this instant, unperceived by the speaker, George Alcott himself unexpectedly entered the room. His face became livid when he heard his mistress' abuse of himself thus freely commented on—but he actually trembled with passion when Caroline Wharton proceeded to charge his sister with a wanton falsehood. His first impulse was to break into the group, to defend his sister's fame, and then to renounce forever all claim to Kate's hand. But after a moment's reflection, he felt he could not control himself sufficiently for this; and, aware that violence of tone or gesture would only make him a laughing stock, he turned on his heel and left the apartment.

Once in his own room, however, he became calmer. Yet his indignation against Kate did not decrease, for this last insult was the drop that made the cup run over. He felt that he had borne much from her—more, indeed than a high-spirited man ought—but his love, which amounted to idolatry, had constantly invented excuses for her hitherto. Now, however, the long accumulating conviction that, with such a woman he never could be happy, forced itself irresistibly upon him. "No, I must be loved by one who will never make a jest of me; I shall cease to respect her if she can mock me," he said. "Henceforth, Kate, though once dear, you and I must be only distant acquaintances. Even if I could forgive you the injury to me, I cannot overlook the insult to my sister." He did not write to Kate that evening, but he waited until the next day in order that he might not be hasty; when, being more than ever assured of the necessity of this course of conduct, he penned her a long letter, in which, after telling her how much her habit of ridiculing him and those he loved had annoyed him during their long acquaintance, he concluded by narrating this last instance of her fatal practice, and the manner in which it had come to his ears.

"After having acted thus," he said, "I am convinced that you do not love me, at least not as I must be loved by the woman who is to be my wife. My feelings for you have always been such that I could not have turned you into ridicule. But all that is over. I am firmly convinced that I could not be happy with a satirical wife. Farewell."

George Alcott was true to his word; and about two years after united himself to an amiable, engaging young lady, of sound common sense and useful acquirements. Kate is still unmarried, and will probably remain so.

Anger.—As a preventive of anger, banish all tale-bearers and slanderers from your presence and conversation, for it is these that blow the devil's bellows to rouse up the flames of rage and fury, by first abusing your ears, and your credulity, and after that steal away your patience, and all this perhaps for a lie. To prevent anger, be not too inquisitive into the affairs of others, or what people say of yourself, or to the mistakes of your friends, for this is going out to gather sticks to kindle a fire to burn your own home.

THE RECONCILIATION.

"Well, I think its likely; but don't tease me any more. Your brother has married a poor girl, one whom I forbade him to marry, and I won't forgive him if they starve together."

This speech was addressed to a lovely girl scarcely eighteen, beautiful as the lily that hides itself beneath the dark waters. She was parting the silvery locks on her father's high, handsome forehead, of which her own was a miniature, and pleading the cause of her delinquent brother, who had married in opposition to her father's will, and consequently been disinherited. Mr. Wheatly was a rich old gentleman, a resident of Boston. He was a fat, good-natured old fellow, somewhat given to mirth and wine, and sat in his arm chair from morning until night, smoking his pipe and reading the newspapers. Sometimes a story of his own exploits in our revolutionary battles filled up a passing hour. He had two children, the disobedient son, and the beautiful girl before spoken of. The fond girl went on pleading:

"Dear father, do forgive him; you don't know what a beautiful girl he has married, and

"I think it's likely," said the old man, "but don't tease me, and open the door a little, this pluguy room smokes so."

"Well," continued Ellen, "won't you just see her now—she is so good, and the little boy, he looks so innocent."

"What did you say?" interrupted the father; "a boy! have I a grandchild? Why Ellen, I never knew that before! but I think it's likely. Well, now give me my chocolate, and then go to your music lesson."

Ellen left him. The old man's heart began to relent.

"Well," he went on, "Charles was always a good boy, a little wild or so at College, but I indulged him; and he was always good to his old father, for all, but he disobeyed me by marrying this poor girl; yet as my old friend and fellow-soldier, Tom Bonner used to say, we must forgive. Poor Tom! I would give all the old shoes I have got to know what ever became of him. If I could but find him or one of his children! Heaven grant they are not suffering! This plaguy smoky room, how my eyes water! If I did but know who this girl was that my Charles has married; but I have never heard her name. I'll find out soon—

Ellen led into the room a beautiful boy. His curly hair and rosy cheeks could not but make one love him.

"Who is that?" said the old man, wiping his eyes.

"That——that is Charles' boy," said Ellen, throwing one of her arms around her father's neck, while with the other she placed the child on his knee. The child looked tenderly up in his face and lisped out:

"Grandpa, what makes you cry so?"

The old man clasped the child to his bosom, and kissed him again and again. After this emotion had a little subsided, he bade the child tell his name.

"Thomas Bonner Wheatly," said the boy, "I am named after grandpa."

"What do I hear?" said the old man, "Thomas Bonner your grandfather?"

"Yes," lisped the boy, "and he lives with ma, at ——"

"Get me my cane," said the old man, "and come, Ellen, be quick child."

They started off at a quick pace, which soon brought them to the poor, though neat lodgings of his son. There he beheld his old friend, Thomas Bonner, seated in one corner, weaving baskets, while his swathed limbs showed how unable he was to perform his necessary task. His lovely daughter, the wife of Charles, was preparing their frugal meal, and Charles was out seeking employment to support his needy family.

"It's all my fault," sobbed the old man as he embraced his friend, who was petrified with amazement.

"Come," said Mr. Wheatly, "come all of you home with me; we will live together; there is plenty of room in my house for us all."

"Oh, how happy we shall be!" she exclaimed, "Ellen and father will love our little Thomas so, and he'll be your pet, won't he father?"

"Ay," said the old man, "I think it's very likely."

Celebrated English Oaks.—An English publication gives the following account of the most celebrated oaks in England:—The oldest oak in England is supposed to be the Parliament Oak (from the tradition of Edward I. holding a parliament under its branches,) in Clumpstone Park, belonging to the Duke of Portland, the park being also the most ancient on the island; it was a park before the Conquest, and was seized as such by the Conqueror. The tree is supposed to be 1,500 years old. The tallest oak in England was believed to be the property of the same nobleman; it was called the "Duke's Walking Stick," was higher than Westminster Abbey, and stood till of late years. The largest oak in this country is called Galthorp Oak, Yorkshire; it measures 78 feet in circumference where the trunk meets the ground. The "Three Shire Oak," at Worksop, is so called from its covering part of the counties of York, Nottingham and Derby. It had the greatest expanse of any recorded in this island, dropping over 767 square yards. The most productive oak was that of Gelones, in Monmouthshire, felled in 1810. Its bark brought £200, and its timber £670. In the mansion of Tredegar Park, Monmouthshire, there is said to be a room 42 feet broad, and 227 feet long, the floor and wainscots of which were the production of a single oak tree, grown on the estate.

Mr. Henry says:—"I have heard of a married couple who, though they were both of a hasty temper, yet lived comfortably together by simply observing a rule on which they had mutually agreed, viz., 'Never to be both angry at the same time;'" and he adds, that an ingenious and pious father was in the habit of giving this advice to his children, when they were married:

"Doth one speak fire? Let other with water come:
In one provoked? be t'other soft and dumb."

A BEAUTIFUL STORY.

A most beautiful and affecting incident is associated with a shipwreck in the following:

The Governor, an East Indiaman homeward bound, goes ashore on the coast of California. It is resolved that the officers, passengers, and crew, in number one hundred and thirty-five souls, shall endeavor to penetrate on foot, across trackless deserts infested by wild beasts and cruel savages, to the Dutch settlements at the Cape of Good Hope. With this forlorn object before them they finally separate into two parties, never more to meet on earth.

There is a solitary child among the passengers, a little boy of seven years old, who has no relation there; and when the first party is moving away he cries after some member of it who has been kind to him. The crying of a child might be supposed to be a little thing to men in such great extremity; but it touches them, and he is immediately taken into that detachment; from which time forth this child is sublimely made a sacred charge. He is pushed on a little raft across broad rivers by the swimming sailors; they carry him by turns through the deep sand and long grass, he patiently walking at all other times; they share with him such putrid fish as they find to eat; they lay down and wait for him when the rough carpenter, who becomes his especial friend, lags behind. Beset by lions and tigers, by savages, by thirst and hunger, by death in a crowd of ghastly shapes, they never—oh, Father of all mankind, thy name be blessed for it!—forgot this child. The Captain stops exhausted, and his faithful coxswain goes back and is seen to sit down by his side; neither of the two shall be any more behind until the great last day; but as the rest go on for their lives, they take the child with them. The carpenter dies of poisonous berries, eaten in starvation; and the steward succeeds to the guardianship of the child.

God knows all he does for the poor baby. He cheerfully carries him in his arms, when he himself is weak and ill; how he feeds him when he is griped with want; how he folds his ragged jacket around him, lays his little warm face with a woman's tenderness upon his sunburnt breast, soothes him in his sufferings, sings to him as he limps along, unmindful of his own parched and bleeding feet. Divided for a few days from the rest, they dig a grave in the sand and bury their good friend the cooper—these two companions alone in the wilderness—and the time comes when they are both ill, and beg their wretched partners in despair, reduced and few in number now, to wait for them one day. They wait by them one day; they wait by them two days. On the morning of the third they move very softly about in making their preparations for the resumption of their journey, for the child is sleeping by the fire, and it is agreed with one consent that he shall not be disturbed until the last moment. The moment comes; the fire is dying; and the child is dead.

His faithful friend, the steward, lingers but a little while behind him. His grief is great. He staggers on for a few days, lies down in the wilderness, and dies. But he shall be reunited in his immortal spirit—who can doubt it?—with the child, where he and the poor carpenter shall be raised up with the words,—"Inasmuch as ye have done it unto the least of these, ye have done it unto me."

Wit and Humor.

COLLEGE EXAMINATION.

Was William Penn the inventor of writing?

Where was the celebrated gunpowder plot situated, and was it a green plot?

Was Sterne, the writer, a very severe man?

Was Pitt the deepest politician of his day?

When a youth is said to be "fond of the weed," does it mean chickweed?

Is buckwheat a particularly smart looking grain?

Does it follow that potatoes are suicides because they shoot out their eyes?

Are the people of Gaul very bitter in their disposition?

Are pavement flags stone-colored?

What is the ordinary size of a garden "box?"

Has wild thyme anything to do with the idle moments of youth?

Does being canonized mean being blown to pieces?—*American Courier.*

An Old Colony spinster, who had been taxed for the support of infant schools and other public expenses, thus winds up a "Protest," directed to the Assessors:

In the name, therefore, and in behalf of my oppressed Sisters of this Commonwealth, and of these United States, I this day enter my solemn Protest against Taxation without Representation. Mercy B. Jackson.

Plymouth, 1854.

Twisting.—Tom presented his bill to his neighbor Joe for service rendered. The latter looked at it and expressed much surprise at the amount.

"Why, Tom, strikes me that you make out a pretty round bill here, eh?"

"I'm sensible it's a round one,' quoth Tom, "and I came for the purpose of getting it squared!"

An Editor who became a military captain, was about to order his men on training. Instead of "Two paces in front—advance," he cried out "Cash two dollars a year in advance." He was court-martialed, and ignominiously ordered to read his own paper four-and-twenty hours.

When a man now-a-days wishes to communicate the intelligence that a daughter has been added to his family, he says that the domestic affairs have reached a *cry sis.*

Youth's Corner.

[Written for the Rural New-Yorker.]

Algebraic Problem.—A man had an amount of money which he divided among his sons.—To the first he gave one hundred dollars and one-sixth of the remainder; to the second he gave two hundred dollars and one-sixth of what then remained; to the third he gave three hundred dollars and one-sixth of what then remained; to the fourth, four hundred dollars and one-sixth of what was left; and so on, until nothing remained; when he found that his property was equally divided among them.—What was the amount of his property, and the number of his sons? Cline.

☞ Answer next week.

Answer to Illustrated Rebus No. 50.—*Music is the only sensual pleasure without vice.*

Answer to Illustrated Rebus No. 51.—*Michael Angelo, the great painter.*

Answer to Miscellaneous Enigma in No. 51.—*Energy is Omnipotent.*

CREDENTIALS OF THE RURAL NEW-YORKER.

The Rural New-Yorker is a paper the fame of which is without a blot. Characteristically Agricultural, it is in the broadest sense a Family Paper, one which may be admitted without doubts as to its leadency. It has an immense circulation, and merits patronage wider still. Its readers are like Oliver, always asking for—Moore.—*New York Recorder.*

Moore's Rural New-Yorker has become a giant among its kind. With a subscription verging fast to 30,000, and with a conductor who knows how to polish it with every grace of the art, and how to accomplish it with the best talent of the age—it is not surprising that it is now the leading agricultural paper of the country.—*Christian Adv.*

Moore's Rural New-Yorker commences a new year with a new and beautiful dress, and, as ever, rich in its every dress. It is full of variety, original and select. No paper on our list of exchanges comes so near our ideas of perfection, for a secular family paper, as the Rural. It has always maintained a high moral standard.—*N. Y. Observer.*

Its leading feature, perhaps, is Agricultural; but in the departments of the Arts, the Sciences, Education, History, Literature and the Daily News, it is most ably and admirably sustained—is an honor to the newspaper family, as well as to its editor and proprietor.—*Mich. Chris. Herald.*

The Rural New-Yorker is decidedly the best Agricultural paper in the United States, in each and all of its departments, and well merits the eminent success which has attended its enterprising Proprietor.—*Boston Olive Branch.*

Independent of its being the very best agricultural paper that has ever come under our notice, its literary merits are unsurpassed. It is certainly the best and most useful paper of the kind we have ever seen.—*Pa. Whig.*

The Rural New-Yorker we can recommend conscientiously, as pure, good, interesting, and useful—calculated to make every family into which it is introduced, both wiser and better.—*Arthur's Home Gazette.*

Mr. Moore ought to make a fortune out of his journal, and we trust he will, for *he is helping to make the fortune of the country.* We bid him "God speed."—*O. Statesman.*

We have so frequently commended the *Rural New-Yorker* that an attempt to add thereto would be like "lending perfume to the rose!" In our opinion it is the best Agricultural, Literary and Family paper extant.—*Pa. Herald.*

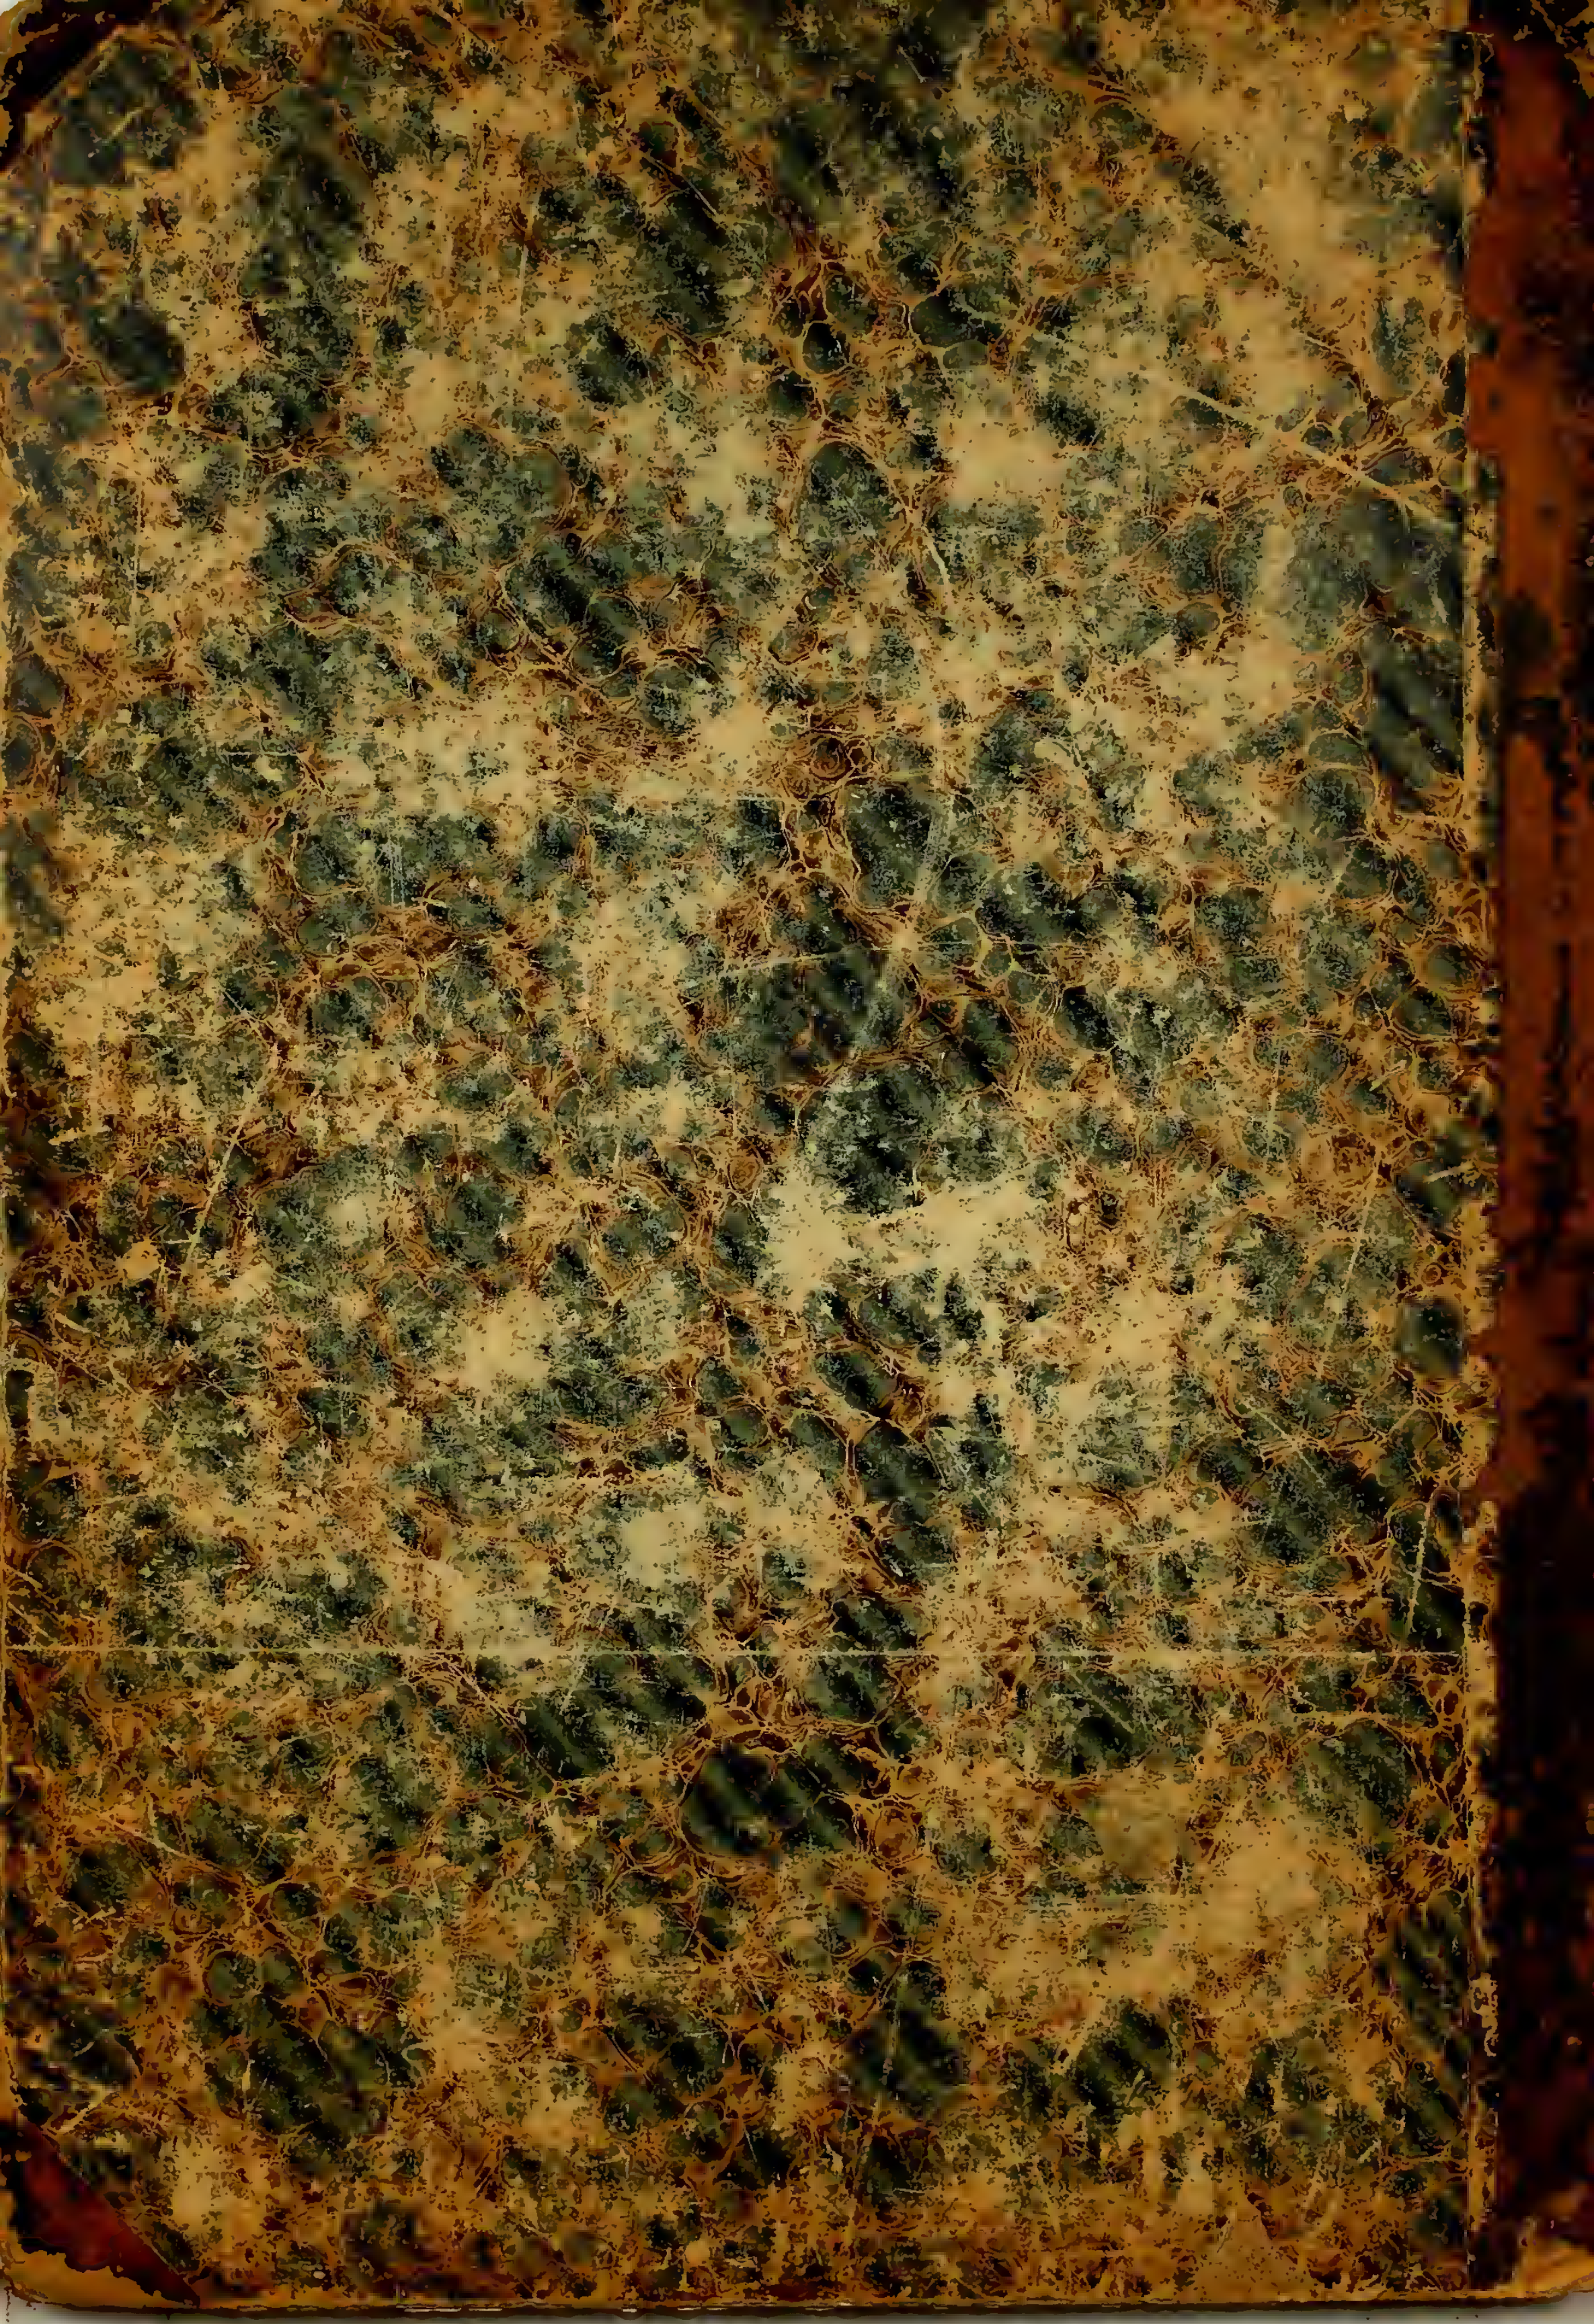
MOORE'S RURAL NEW-YORKER,
IS PUBLISHED EVERY SATURDAY,
BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe county, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 160 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.


☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.
